Why should we in this country be in such a matter so far behind our neighbours on the continent? 'They manage these things better.' You hand your luggage to the railway officials before taking your seat in the carriage. It is labelled to the station whither you are going. It is, moreover, numbered; and you receive a ticket with the corresponding number and description of your packages, which is equivalent to a receipt. When you reach your destination, you present your

ticket, and receive your luggage, which is handed to you, or some one on your behalf, only on the exchange of your ticket for it. The railway Company holds itself responsible, and the officials therefore take every care that nothing is lost *in transitu*; and stealth is rendered impossible, unless, indeed, the ticket be first stolen. For this security you pay a small coin, averaging about one penny for each article; a sum no one certainly grudges, to insure his luggage being safe and his mind free from anxiety about it.

Compare this with the system, or rather no-system, of our railways. Arrived at the terminus let us suppose, the porters begin to tear out the luggage—portmanteaus, boxes, hat-boxes, carpet-bags, parcels of every description, and toss them helter-skelter into an indiscriminate heap upon the platform. The passengers whose property is thus roughly handled congregate around, nervous and excited. A general scramble ensues. Ladies are jostled; old gentlemen get their shins bruised or their toes tramped on; young children holding on by their mothers' or nurses' dress, wondering and confused, or terrified by the hubbub and screaming, run no small risk of getting smothered or crushed in the press. The passenger who is able to collect all his luggage in safety has much reason to congratulate himself. Ladies, however, who may happen to have no masculine companion to look after their traps, and who may not be particularly strong-minded and strong-bodied, shrink back, and stand aloof in the outskirts of the crowd, and so run a proportionally greater risk of being robbed. In the midst of the bustle and confusion and crush, a gentlemanly looking individual quickly and quietly gets hold of a portmanteau, adroitly half conceals it with a plaid or greatcoat, and walks off. The chances are he eludes detection and secures his prize. He will certainly do so if the owner has not his eye on his property, for assuredly there is no one else who will interfere. But it is possible the owner, if he is pretty sharp, and happens to be pretty far forward in the crowd, recognises his property thus surreptitiously taken possession of. He pounces

upon the 'gentleman' with a rough challenge: 'Hollo! where are you going with my portmanteau?'

'Your portmanteau!' is the confident reply; 'it is mine.'

'Nothing of the sort,' is the indignant answer. 'My name is on the brass plate.'

The gentlemanly looking depredator thus arrested, affects to be equally sure the portmanteau is his, but cannot escape the challenge of the real owner to prove whose it is by a closer inspection; so he mildly puts it down with a charming air of injured but conscious innocence; and lo! it turns out as the real owner had said. With a genial and deprecatory smile, the gentlemanly looking thief gracefully lifts his hat and makes a most ample apology: 'I beg a thousand pardons; I was perfectly sure it was mine. It is exactly like it. What a stupid mistake!'

The proprietor of said portmanteau is somewhat ruffled, but congratulates himself upon his promptness in recovering his property without any more trouble or inconvenience, never thinking at the moment that in all probability, if he had not been in the front rank of the crowd and keeping a sharp outlook, he would never have seen it again. This is no imaginary case. It is exactly what we once witnessed, and it is what no doubt often occurs.

Another thing certainly also often occurs. The thief is not noticed, and gets clear off with his booty. And what remedy is there? What can you do in such a case as we have sketched? If you were sure the gentlemanly looking depredator was a thief, you would very probably give him into custody. But how can you be sure or prove he was not speaking the truth? Perhaps he was. Perhaps he was no thief. He did not look like one. Portmanteaus are very much alike. A perfectly honest man might have made such a mistake. You shrink from causing a scene on the platform. It might turn out that he is a perfectly honourable gentleman, and of course therefore utterly incapable of doing such a thing as you suspect; and you would in that case be so grieved to wound his feelings by charging him with theft. Whatever your suspicions may be, you are glad enough you have not lost your property, and you do not care to put yourself to the inconvenience of following up the matter any further.

There is another way in which passengers' luggage is in danger of being lost, and often is lost. It may have been properly addressed and labelled to your intended destination; but as every one knows, there is never any difficulty in getting it from the guard at any intermediate station. You say to the guard: 'I want my portmanteau, labelled to such a place, and with my name on it'—giving your name. 'I'm going to wait here till next train.' You look into the van and point out what you want—the label and address just as you said. The guard hands it out to you without hesitation or suspicion. Now, suppose instead of the applicant being yourself—the

owner—it is some one else, a professional portmanteau-stealer, who wants your portmanteau, which he thinks from the look of it promises something worth a little risk. He has set covetous eyes on it at the station of embarkation before it was put into the van, and he takes a mental note of the address and destination. At any, to him, convenient intermediate station at which the train may be stopping, he applies to the guard just as you might have done, giving all particulars of name, address, and destination with the most innocent and off-hand promptness, and as easily as you would have done, carries off your property in triumph.

A few months ago the writer was travelling from Stirling to Edinburgh. His luggage was labelled and addressed to the Waverley terminus. It fortunately happened that he was looking out of the window at the Haymarket Station, where tickets are collected, and was not a little surprised to see a man coolly walking away with his portmanteau. Springing out of the train, he speedily recovered it. The train was just starting, and he had no time to consider whether he should take any further notice of the matter; but he very strongly suspects he made an exceedingly narrow escape of being victimised by a portmanteau-stealer. A lady-friend of the present writer going from Stirling to Glasgow, saw her portmanteau, which was fully addressed, properly labelled at Stirling Station, and put on the railway barrow amongst other luggage in charge of a porter, ready to be put into the van on the arrival of the train from the north. Never doubting that all was right, she did not go to see it put in; but when she arrived at Glasgow her portmanteau was nowhere to be found; and she never recovered it or obtained any trace of it; nor did she obtain any compensation from the Company, being unable to prove that it was put into the luggage-van. It was stolen, that was certain; and all the probabilities pointed to its having been 'appropriated' at one of the intermediate stations in some such way as we have indicated.

Now, we say these things should not be possible; and if the continental system, to which we have referred, or the American were adopted by railway Companies in this country, they would not be possible. Moreover, the Companies would, we believe, make a handsome profit out of the small luggage-fees. At any rate they certainly would not suffer loss by such an arrangement, and passengers would be secured against theft and the anxiety and uncertainty they must always feel so long as the present system continues. 'Passengers are requested to look after their own luggage, as the Company will not be responsible for its safety unless booked and paid for as goods.' Such a notice looks exceedingly like grim irony on the part of the Companies, for they render such looking after impossible, by stowing away passengers' luggage in the van, and so removing it from the owners' personal super-

vision. But after all, such intimation notwithstanding, we believe the question of responsibility is not altogether as the Companies represent or wish people to suppose. Should your luggage not be forthcoming at your journey's end, if you can prove that it was put into the van properly addressed and labelled, and moreover prove the approximate value of the same, the court, if appealed to, will order compensation up to a certain amount. But these are just things you will find not so easy to prove, and failure of proof in these respects means no redress. But even if you should succeed in recovering the money value of your stolen property, the inconvenience and annoyance and expense to which you are certain to be subjected, are vexatious in the extreme. And even that is not all. Very probably your portmanteau contained something, some family relic or keepsake, of small intrinsic value indeed, but to you invaluable, and the loss of which you will never cease to deplore.

The only objection we have ever heard to the adoption of the continental system is the time that it is alleged would be lost before the luggage could be distributed by the officials, and people are generally in too great a hurry to be off, to wait. To this it ought to be an amply sufficient reply, that the difference could not be more than a very few minutes, which surely would be far more than compensated for by the security that would be gained. But further, people who may be travelling with much luggage, requiring it to be conveyed in the van, are not generally in such a hurry as to make the additional few minutes of any consequence; while those on the other hand who are in hot haste—business men for the most part going between their country residences and their offices—have commonly very little luggage, probably only a small hand-bag, which they can always take with them in the carriage.

On the whole, we submit it is full time something were done to protect the travelling public from the depredations of portmanteau-stealers.

## A LIFE'S ATONEMENT.

### CHAPTER VII.—AUTOBIOGRAPHY.

*'He is gone,' he said—'gone without a trace.'*

WHAT a charm clings always about the past. It is easy to believe and graceful to proclaim the exceeding happiness of childhood. But I am not at all sure that most men's raptures on this matter are very real, or that they are always based on any very vivid recollection. It is certain that the man who is distracted by the playful noises of children has forgotten his own childhood. A remembrance of early boyhood is a retention of infancy. The juvenile man remembers his juvenility. Looking back, I am conscious of the fact that there is between me and the time I look at, an atmosphere of glamour. The child of my remembrance is partly—or I fear so—the child of my own after-creation. I have moulded and modelled my infant memories; or if I have not, I am indeed fallen. "God help thee, Elia—how art thou changed!—thou art sophisticated! I know how honest, how courageous—for a weakling—thou wert, how religious, how imaginative, how hopeful!"

But if ever I was happy, I know that I was happy then—in the first month I spent in Island Hall. Waking in the morning—I remember now how the wet boughs would tap against the window, and how the late dawn came grayly in between the white curtains—I woke to a sense of luxury in my surroundings which was altogether new and strange and beautiful. Every day's breakfast was an event. Aunt Bertha was president over that simple table; Sally was in invariable attendance; and it was there that Polly and I made our first daily encounter, and my heart had fastened to each of them.

In what other respect soever my after-thoughts have moulded memory, I am quite sure about one matter. Taking leave to regard myself as I was at that time—as indeed, indeed I very fairly may—as a creature altogether differing from my present self, I am inclined to think that the chief part I played in this episode of my life must have been very gracious to the on-looker. I bend over myself now—over that past child-self—in a sorrowful wonder that the chivalrous and tender soul I knew it, should ever have fallen thus away—could possibly have degenerated into that poor creature who wears his name, and who pretends to his adult personality.

I fell in love with Polly. Whether by the pure light of unadulterated instinct, I could have done so, I cannot guess; but I had reading enough to help out my imaginings, and I fell in love. Polly ordered me whithersoever she would, and was as conscious of my enslaved condition as I was myself. She was a sort of female Ahasuerus—I a kind of male Esther, admitted to the royal courts by rare extension of the royal favour, and approaching with an almost sacred awe. The books to which I had access at this time were many and various. In one of them—a certain trashy novel of the Lady Laura Matilda species—I found mention of a *jongleur*. I became a *jongleur*. With the delicate fervour of a minstrel, with the reticence and awe that minstrel might experience in the presence of his queen, I, in happy moments, was permitted to approach the throne of love, and to open up my budget of stories, travelling at times through those lands of grim humour known as The History of the Three Bears—which lands I explored under Polly's formal order—touching at times upon the terror of the Bluebeard Chamber—unfolding, in antres vast and deserts idle the tent of Peribanou—sallying forth in disguise with Haroun Alraschid and the Grand Vizier—whose names, by-the-way, were a terror and a stumbling-block—and rising at times to the tragic heights of Little Red Riding-hood.

The season of the year went against the possibility of outdoor excursions. The greater part of our time was spent in that chamber in which I was first introduced to Polly. Polly would sit enthroned near the fireplace, whilst I, fenced round with books, occupied the corner farthest

from the fire, and prepared myself for my story-telling function. My queen's especial passion at this time was the cutting of scraps of paper into quaint devices—an operation in which Uncle Will at times engaged himself with a splendid adroitness. In her leisure hours, Polly generally sat with a pair of scissors in her hand, engaged in the manufacture of dragons and other wonders; and by a queenly wave of scissors or of dragon I was now and again admitted to audience. My business of amusement over, I was dismissed, being occasionally rewarded with a paper emblem of royalty's approval. At other times Polly would unbend, and would condescend to meet me on an equal footing.

It is easy enough, no doubt, for any adult person who may read this chronicle to laugh at those childish raptures; but I protest that at such times I was filled with a tranquillity of peace, a satisfied hope, such as I have never since experienced, such a soft gladness and chastened joy as might become the mind of some meek angel.

I can remember quite distinctly how, under these influences, the past melted and grew undefined. It was a somewhat hard past, with not always enough to eat in it, and not always enough to wear; a past in which rude and domineering boy-giants, wearing clogs and corduroys, and addicted to the practice of mauling such unprotected and inoffensive youth as they encountered, held evil place. I remember how far-off that past came to look; and yet it was always near enough to give an added relish to my security and comfort. I can thank heaven that it is near enough even now for that, and I can think of such as hold a like place with something more of sympathy and kindness than I should probably have known without it. The only fragment of that near past which still remained forcibly with me was the face, and it had welded itself into my life in an altogether inexplicable way. I can only describe the feeling I had concerning it by saying that it seemed always in attendance in some anteroom of fancy, and always clamouring to be let in. It came to haunt me so that it grew into a habit of reproducing itself in other faces—the living faces of people about me. I saw it often, for instance, in Mr Fairholt's face, in Uncle Will's, in Aunt Bertha's. It would flash out at unexpected times, and would disappear again as rapidly as it came, being gone before I could fix it. It was my constant companion when alone, and I often dreamed of it. I suppose I must have been a morbidly fanciful child—as I know that I am now a morbidly fanciful man—but I had a decided joy in the fact of my personal proprietorship of this phantom. As I became more and more accustomed to its exigent presence in that antechamber of fancy, I became also less afraid of being afraid, and often let it in of my own free-will, and extracted a delicious fright from it. This very soon brought about the result which might have been expected, and custom robbed the unwholesome pleasure of its keenness. If it had not been that the events of life began to move for me with somewhat more rapidity, I might have worn it out altogether by this over-use, and so have missed that knowledge of a great life-tragedy to which it led me.

I had been in Island Hall exactly a month when I was witness to a conversation between Mr Fairholt and Aunt Bertha. I was not often

in his room; but was on this occasion carried down by Sally, who had been sent for me. She was evidently much disturbed, and was very defiant of something. As she carried me downstairs she hugged me several times, imprinting her buttons painfully on my frame in the strength of her affection. Tapping at the door of Mr Fairholt's room, and being by him peevishly invited to come in, she entered, bearing me in her arms. I was ridiculously conscious, I remember, of a certain want of dignity in my own behalf in this proceeding; but when I made a motion to escape, Sally only held me tighter; and having been pretty strictly trained in ways of obedience to her, I stayed where I was. Mr Fairholt was seated in an arm-chair near the fire, and Aunt Bertha stood on the rug with one hand tapping a little angrily on the mantel-piece.

'You may set down the child and go, Troman,' said Mr Fairholt.

'Begging pardon, sir,' said Sally; 'but might I make bold to be allowed to stay?'

Mr Fairholt looked up angrily.

'I brought him here,' continued Sally, 'on condition as he wasn't to be took away from me.'

Mr Fairholt looked at Aunt Bertha, casting his hands abroad fretfully, but said nothing.

Aunt Bertha turned and said: 'Give me the child, Troman. Nothing shall be done that is not for his good; be sure of that. I will let you know what we have decided to do, as soon as we have decided anything.'

'Thank you ma'am,' said Sally; 'and set me down and left the room.'

Aunt Bertha took a seat, and drawing me to her side, put an arm about me.

'What possible object,' asked the old gentleman, 'do you think you can serve by bringing him here?'

'There are some people,' said Aunt Bertha, with an angry little laugh, and an angry little shake of her head, 'who can only remember that which is directly under their noses. I want you to remember, Robert,' she continued in a changed tone, 'that you were almost as defenceless, though not so young, when his father helped you, and to refuse now to give him house-room, does really seem to me inhuman.' There Aunt Bertha became angry again, and spoke with great decision.

Mr Fairholt raised his eyes for a moment to meet hers, but dropped them hurriedly. 'I told you before,' he said, 'that I would give you a month to think what you would do with him. The month has gone, and you have done nothing.'

'Surely,' said Aunt Bertha, 'you are not insensible to the claims he has upon you?'

'All this,' said Mr Fairholt, rising and walking in that irritated way of his up and down the room, 'is very sentimental and womanly and so forth, I have no doubt. But now what do I propose to do?' He stopped short before her, fidgeting with his hands; and she passed me over to the other side of her chair, and laid her left arm round my shoulder, drawing me to her, as if sheltering me. 'I don't say, turn him out to starve. I don't even say, send him back with his old nurse, that—that woman, Troman.' He spoke of Sally in an angry way, pausing before the

word 'woman,' as if in search of some unpleasant adjective, and jerking it out spitefully when he decided upon it. 'There's nothing inhuman or barbarous in what I propose to do. I tell you that I don't like the child. I tell you that he irritates and worries me. I tell you that I will not have him grow up with my daughter and in my house.'

'Then,' said Aunt Bertha, 'what will you do?'

'I will do anything in reason—anything short of that. What do you ask me to do?'

'I ask you to do what seems to be your clear duty,' she responded. 'The child is fatherless and motherless, and is your nephew.'

'You talk nonsense, Bertha. He is not my nephew; he is not even yours. He is the son of my sister's husband's brother—*your* husband's brother. His mother I never knew. His father I have not even seen for years. And now you urge upon me the mere fact that I had a business loan from him—which I repaid, mind you, Bertha—which I repaid, honourably and with interest—every farthing. And you bring this as a reason why I should maintain the child, whom I dislike, and in whom I perceive the seeds of—the seeds of—of unpleasant influences—that I should maintain him, not as I like and as it suits me, but in your way; whether I like it or not, and whether it suits me or not—in my own house and in companionship with my child! I have told you already, Bertha, and I repeat it—it is preposterous.' Mr Fairholt went up and down the room in a series of peevish jerks, and was quite white with anger when he concluded. He resumed his seat, and sat in silence, except for a short gasp of incredulous indignation now and then.

'I don't say, Robert,' said Aunt Bertha, persuasively, 'that the relationship is a very intimate one; but still it is a relationship, and it must be recognised. I am sorry to hear you speak about the loan in that way. I think you have forgotten the facts.' There Aunt Bertha again grew very decided. 'It was not a business loan. No business man would have advanced it. You are certainly wrong about the interest. That, I remember, he declined to take.'

'I don't care,' said Mr Fairholt, flushing a little. 'I should have said that I offered it, that I—I pressed it upon him. I will not have the child in my house. He can be just as happy and as well-off elsewhere. Send him to school.'

'The child,' said Aunt Bertha, drawing me a little closer to her side, 'is very young and delicate. He has no home of his own, nor have I. I can't at all understand your aversion to him; and I may tell you, Robert, once for all, that sooner than see him discarded and shut out from home-influences, I will find a home of my own again, and take him with me.'

'I don't mean that at all, Bertha,' said Mr Fairholt. 'You know how glad I am to have you here.'

Aunt Bertha smiled—a hard little smile—and said nothing.

He caught her glance for a moment furtively, and went on in haste: 'Let him go to school, and come here for his holidays. Let him be sent to a good school. I don't grudge him that. But I cannot, and I will not have him here always. He annoys me; he worries me. When you

speak, Bertha, of the claims his father had upon me, you speak ignorantly. Those claims were annulled and more than annulled by his conduct afterwards. You know that I never spoke to him for years.'

'I did not know it,' said Aunt Bertha sadly; 'and I am very sorry to hear it now.'

'Of course,' said he, irritated by her tone, 'the separation, in your mind at least, would be of my seeking. But I tell you that he came here, and in this very room flaunted his favours in my face. I shall not attempt to justify myself.'

'I make no accusation, Robert,' she replied. 'If you are willing to send the child to school, and to allow him to return here for his holidays, I am willing to accept that as a compromise. He is very young and very little.' She looked down pityingly upon me, and in a vague sort of way I was conscious of feeling sorry for myself. And though the feeling was vague, there was such a pity in her face and voice that the tears rose to my eyes. She bent down and kissed me. 'It would be kinder in you,' she went on, 'to let him stay here for a while.'

'I thought,' said Mr Fairholt, nervously interlacing his fingers and snatching them apart, 'that you accepted the compromise. It is no compromise unless he goes at once.'

My aunt rose taking my hand in hers. 'Will you leave me,' she asked, 'to select a school?'

'We can discuss that together,' he answered.

'Very good,' replied my aunt, and so led me from the room and into my own bedchamber, where we found Sally, making a great pretence of dusting and arranging.

'Would you mind saying what's been done, ma'am?' asked Sally, turning round with a duster in her hand.

'Mr Fairholt is very strongly in favour of sending the child to school. I think too that it would be the better course. We must not grow up idle and ignorant; must we, Johnny?'

I recognised this as an appeal to Sally, and answered 'No' as stoutly as I could, for I saw premonitory symptoms of tears in her eyes. Notwithstanding the stoutness of my answer, the tears came.

'O ma'am,' cried Sally, 'I can't let him go.'

'Now Troman,' said Aunt Bertha, 'you mustn't be ridiculous.'

'No ma'am,' assented Sally, amenable to discipline.

'He will not go far away, and we will make arrangements to let you see him as often as you can.'

'Couldn't I go with him, ma'am?' said Sally. 'Couldn't I take a situation in the school?'

'I think you had better stay with us, Troman,' said my aunt, smiling. 'It is scarcely likely that a school can afford to keep a domestic servant for every pupil. He will probably go to school in Wrethedale, which is very close at hand; and you will be able to see him perhaps as often as once a week. And then, you know,' said my aunt, humouring Sally, 'we shall have him coming back quite a young gentleman.'

Sally brightened a little at these fairer promises, and wiped her eyes. At the sound of hoofs in the carriage-drive below, I looked through the window, and saw Mr Fairholt in the act of mounting a horse held by the groom. Aunt Bertha also

looked out, and seeing what I saw, shrugged her shoulders a little. She left me with Sally a moment afterwards, and that good creature, as was her wont on all disturbing occasions, moistened me with her tears. She emptied upon me, as a guard against possible starvation in my as yet unfixed new quarters, the sum of two shillings and threepence-halfpenny in copper. She also gave me a thimble, of which she instructed me to take especial care, since its continued possession betokened 'luck.' Then she sat down on the floor and took me in her arms, and grew quite cheerful, and we had a long, long talk together. I opened my heart to Sally then, as always. I had been very shy about my passion for Polly; but I told her then with a serious fervour, which I have not felt often since, that I meant to come back a great man and marry that young lady. Sally was as much delighted at this protestation as I at her delight, and received it with the utmost enthusiasm. We talked the matter over until I verily believe that Sally was as strongly infected as myself, and accepted it in her simple faith as earnestly as though I had been five-and-twenty, and had propounded it in all manly seriousness.

'And I shall be a man soon; sha'n't I, Sally?'

'Yes,' said Sally, rocking delightedly to and fro, and leaning on me in her happiness. 'Why, you're quite a man already in them things!' Sally set me on my feet in order to look at me, and chuckled over me in very admiration and affection.

'Do you think, Sally,' I inquired—'do you think she'll have me?'

'Why, bless the child!' cried Sally in an ecstasy, 'of course she will.'

Therewith she made a dart at me and embraced me, bruising my nose against the brazen presentment of a horned Dian who stared from a huge brooch in Sally's collar. That brooch was the gift of a young carpenter who was devotedly attached to her, and whose epistles—occasionally brought by a young urchin in corduroys to the old cottage in the Black Country, and inscribed not infrequently on thin pieces of smooth-planed deal—it had been one of my earliest tasks to decipher.

'And then, Johnny,' said Sally, blushing and chuckling, 'when you're growned a fine gentleman, and you're married and all settled down comfortable, I'll come and keep house for you; and you shall have Bob for groom and gardener.'

I promised earnestly that I would, and there the conversation closed. I heard Mr Fairholt's voice below, and thought how soon he had returned. But the time had gone quickly during my talk with Sally, and the hour for tea had arrived. It was already dusk, and before tea was over had grown quite dark. I was not as a rule allowed down-stairs after dark at all; but impelled by what childish vagary I scarcely knew, I stole down the stairs and through the hall and on to the damp lawn. I ran across with a sense of fear upon me, looked over the bridge into the darkness, and heard the hurrying river moan below. The voice of the river and the darkness of the night frightened me, and I retraced my steps quickly. The hall beyond the open door lay in black darkness, and some one bearing a lamp appeared so suddenly within it, that the quick and unexpected advent of the light came like a blow upon my eyes. The

bearer of the lamp was Mr Fairholt. He caught sight of me as I stood with one foot upon the doorstep, and beckoned me. I went timidly towards him.

'Bertha!' he called.

My aunt came from Mr Fairholt's room, and I noticed that she looked grave and troubled.

'I had forgotten,' said Mr Fairholt, hurriedly and nervously. 'I have made arrangements for him. He goes on Thursday.' He drew a card from his pocket, and read it by the light of the lamp: "'Rev. Charles Davies, The Grove, Wrethdale.'" At six o'clock. Have things ready as soon as possible, and see that he goes.' Then continued Mr Fairholt in a somewhat lower tone, 'I will be back as soon as I can. If I have good news, I will let you know.'

'Do not keep me in suspense in any case, Robert,' said Aunt Bertha.

'You shall hear as soon as possible,' he answered.

'Have you everything you want?' asked Aunt Bertha.

'Yes, yes,' he responded irritably. He struggled into a greatcoat, and paced in his own excited fashion up and down the hall. I heard a sound of wheels upon the drive, and the lamps of the dog-cart gleamed through the darkness. Mr Fairholt put on his hat and went out. The groom came in, and took away a portmanteau and a travelling-rug. Aunt Bertha went to the door and called to Mr Fairholt. He returned, and she said something to him which I did not hear. I had not observed his face till now; but as she stood aside, with her hand upon the door, it came upon me suddenly, with such a horror as I can scarcely name—in every lineament, and in its tone of awful pallor—with its haggard eyes and updrawn lip, the face I saw a month ago. In another second it was gone and the door was closed. I passed up-stairs, and suffered unspeakable nervous terrors until, put to bed, I fell asleep with the pressure of Sally's loving hand still on my cheek, and slept without a dream.

For the next day or two Sally scarcely allowed me to stray beyond her sight. She followed me about like that proverbial hen who finds that she has a duckling for a chicken, and discovers that the scarce-fledged creature is bent on taking to the water. Polly and I had a long and favourable interview on the fatal Thursday afternoon. She had been all majesty in the morning—a gracious majesty, I must confess—frequently waving me from my corner—for it was a holiday, and there were no lessons from Aunt Bertha—to bid the humble *jongleur* recite her favourite stories. At table her majesty was pensive. On the removal of the cloth, she cried, and after a little while retired from the nursery to indulge a royal sulk in private. This over, she reappeared, imperiously and without apparent provocation kissed me, and then rang the bell. This was an act prohibited by authority under heavy penalties, except in cases of great emergency. Sally appeared in answer to the call. Her majesty, whose eyes were still moist, flounced round upon her.

'T'ouan,' said her majesty, 'I tan't spare him. Tell Aunty Bertha he sha'n't go.' With this edict she resumed her throne, and set resolutely to work upon a paper dragon.

Sally shook her head. 'They're gettin' Master Johnny's things ready now, Miss Mary.'

'I don't care,' returned her majesty, with a wave of the scissors; 'I can't spare him.'

'Very well, miss,' said Sally, and went away again.

Childhood sails a tiny craft, upon a very little pool indeed. But the shallows of that little pool are deeps to the child. The little waves that wimple at the edge are breakers. The child-craft suffers wreck as disastrous, or finds passage as happy, as the great merchantman that goes down in the depths, or is brought by fair winds to the desired haven. And I suppose that I was as sincerely joyful at the issue of Polly's childish ukase as I have ever been at anything. I was persuaded that her judgment was final. Her manner carried conviction. She was so convinced herself, that in me a doubt would have been an unpardonable presumption. So for another hour or two, beneath calm skies and over pleasant seas, went the barque of Childhood's Hope with a steady breeze abeam. But at four o'clock Aunt Bertha came upon the scene as cloud-compeller. The horizon darkened—the deeps yawned—the vessel foundered. To drop the metaphor: I was carried away and dressed, undergoing that operation in a condition of mind of the most concentrated misery. To take up the metaphor again: I went down with the shriek of the tempest in my ears. A furious little tempest she was indeed, though rapidly silenced by the cloud-compeller, and put to bed, like other tempests, with repentant moans.

The blazing eyes of the dog-cart were at the door again. I had taken leave of Sally, and was saying good-bye to Aunt Bertha, when a hoarse voice called from the gate of the eastern bridge, and the groom went crunching down the gravel drive. Aunt Bertha stood and listened, with her hands upon my shoulders. I can see now the kindly stooping attitude change suddenly to one of listening fear, the stoop remaining, but its whole expression changed. I can see now the kindly look, which vanished as though a hand had passed across her face and smoothed it out, and left a look of waiting terror there. The groom came crunching back again, and behind him came a cab, the horse in the shafts jumping painfully, and throwing off a great cloud of steam. From the cab emerged Mr Fairholt. At the first sight of his face, Aunt Bertha started upright, ran to him, and took him by the hands. He put her away feebly and impatiently, and entering, sank into a chair in the hall. Aunt Bertha bent above him with an air of great anxiety. He shook his head in a slow dazed way from side to side.

'He is gone,' he said—'gone, without a trace. Has been gone for nearly five weeks.'

'Robert!' said Aunt Bertha, and put an arm about his neck.

He rose to his feet, setting her arm aside, and looked round with his gray face drawn into the semblance of that phantom which I knew so well. 'Shut out those people,' he said slowly. He caught sight of me, and stooping above me, patted me on the shoulder; and with a sudden attempt at cheerfulness, which was more dreadful than even the expression of his face, he said lightly: 'So our little man is going to school. Well, well. Be a good little man. Good-bye.'

Aunt Bertha, with a backward glance at him, led me to the door. The groom lifted me into the

dog-cart, and having wrapped me in a thick travelling-rug, took his place beside me and drove me away. As I looked back, I saw the lamplight gleaming through the open door, and the lame and steaming cal-horse standing dejectedly by it.

### VICTOR JACQUEMONT, THE FRENCH NATURALIST.

To grasp a few of the truths which make up the wondrous unity of nature, is the vocation of the naturalist; and no man has ever given himself to this noble life-work with a fuller self-abnegation than Victor Jacquemont, a promising French naturalist, who found in 1832 a premature grave in India.

Born in 1801 in Paris, where his father, a man of considerable literary and scientific attainments, filled at one time the office of Director of Public Instruction, he at a very early age evinced a strong attachment to natural history, the practical outcome of which was that he received a letter from the Directors of the Jardin des Plantes in Paris, proposing to him an expedition into India, which should be ethnological, geological, and botanical. After some little hesitation he accepted this offer, and prepared for it at the end of 1827. Before setting out on his Indian expedition, he went to London, armed with a letter of introduction from Baron Cuvier to Sir Alexander Johnston. To the kindness of this gentleman he owed the flattering reception accorded to him by the Royal Asiatic Society, and also letters of introduction to the most influential men in India. With the Board of Merchant Princes in Leadenhall Street, who then swayed the destinies of India, he had rather more trouble; and it was only after several vexatious delays that he succeeded in obtaining from them the necessary credentials. Furnished with these, he embarked on board a man-of-war which was bound for Bengal, with the new governor of Pondicherry on board.

*La Zélée* was a very slow, and moreover a very noisy ship; and to the studious naturalist, her officers, although good enough fellows, were anything but congenial companions. In due time, however, that is to say in the beginning of May 1829, the vessel arrived in Calcutta; and Jacquemont, scrupulously arrayed in black, armed himself with one of his letters of introduction, and getting into a palanquin, ordered himself to be conveyed to the house of the Advocate-general. Here he was shewn into a large drawing-room, where 'I found,' he says, 'three ladies in full toilet, and a man with gray hair in a light cotton dress; all four being fanned by a complicated machinery of hand-screens.' Prepared only for the grave presence of the Advocate-general, he was taken so entirely aback that he got momentarily confused, and could only stammer out: 'I used to speak a few words of English, but I perceive I have forgotten it all; pray help me.'

This appeal was irresistible; he was helped so effectually that he was soon at his ease, and quickly got rid of all his letters of introduction, including one to Lady William Bentinck and another to the Governor-general. With both these exalted personages he soon became a great favourite, and was a frequent and welcome guest at Government House. In Calcutta he became at once the fashion;

but he had come out to India not to enjoy himself but to work. He had, moreover, for his work a zeal and ardour which urged him irresistibly to give his whole heart and soul to it. He had health and strength, and knowledge sufficient to warrant fresh discoveries in all the branches of science for which he had undertaken to cater; but another requisite was wanting to success—money. He had been sent out with an allowance of six thousand francs a year (about two hundred and forty pounds), and in his inexperience he had considered this sum ample; now he began to see that it had inconveniently narrow limits. He resolved, however, to start at once for Benares; but first he wrote a letter to the authorities of the *Jardin des Plantes*, setting before them the difficulties of his position. Pending an answer to this appeal, he bought for six hundred and fifty francs (twenty-five pounds) a young Persian horse saddled and bridled. This was upon the whole a good investment. 'I read, sleep, and study my plants with a magnifying glass,' he writes, 'all the time I am on horseback, although sometimes he throws me, when I am stupid enough to dispute with a beast without reason.'

When he had fairly set out upon his wanderings, he discarded his suit of ceremonious black, and arrayed his tall meagre person in a long nankeen dressing-gown, over which was wrapped a robe of coarse silk; while his pale spectacled face was shaded by a large straw hat covered with black taffety; stockings he did not wear except at night. He had a little tent with him—'a handsome mountain-tent,' he calls it—of which he was much enamoured; also a bamboo cot, ten servants, and two cars and oxen. 'I have only two plates,' he says, 'and I have a man to wash them. Woe be to him if they are not clean.' His habits when on the march were as abstemious as possible. At four in the morning he breakfasted on a pound of rice boiled in milk, with a little sugar, which was all the food he took until his tent was pitched in the afternoon. Then he dined upon a chicken when it was forthcoming, but more usually upon some scraggy patriarch of the feathered tribe, stewed with rice in rancid ghee or native butter. He had no bread, and his only drink was water, mixed, when his health required it, with a little brandy. When it chanced to be cold at night, or when he had much writing to do, he sometimes treated himself to a cup of tea.

On the 31st of December 1829, he arrived at Benares, having encountered considerable difficulties on the road. 'Where should I have been,' he writes pathetically in one of his letters, 'without my guard? Undoubtedly drowned in the mud at the mouth of some river.' Since leaving Benares he goes on to record: 'I have come to an admirable arrangement with my horse, who suffers me to read undisturbed all day long upon his back, provided I do not thwart him in any of his whims. The magnificent English consider this pace very negligent; but as they know the value of time, my character as a gentleman does not suffer by it.' At Delhi, where he arrived in the beginning of March, the Great Mogul held a *darbar* in order to receive him, and solemnly invested him with a *khelat* or dress of honour. This he variously describes as resembling a Turkish dressing-gown, and a worked muslin dressing-gown; and to crown the honours of his life at Delhi, he goes on to

mention for the benefit of his father: 'I never go out either in a carriage, a palanquin, or on an elephant without a brilliant escort of cavalry.' He was, moreover, styled *Sahib Bahadour*, or lord victorious in war, and by this title he was ever afterwards known in the East. In Delhi he left the collection which he had formed during the five or six hundred leagues he had travelled, and in the middle of March resumed his solitary wandering life, travelling towards the mountains.

These Indian Alps seemed to him inferior in picturesqueness and beauty to those of Europe. 'In the highest mountains in the world,' he says, 'there is necessarily grandeur, but it is grandeur without beauty.' He found, however, in their rugged and desolate fastnesses many new plants, and the remains of shell-fish even in the more elevated strata, and considered himself by these discoveries amply repaid for his fatigues and privations, which were many and grievous. He was very poorly fed, and had been compelled by the exigencies of mountain travel to leave behind him most of the few comforts at his command. Boiled rice, while it lasted, still formed the staple article of his food; and when it was exhausted, the compulsory change to wheat and barley made him ill. Then he suffered much from the cold, which was great. One night he camped out at an elevation a thousand feet higher than the summit of Mont Blanc, and several times he crossed passes eighteen thousand feet above the sea. In these circumstances the night cold was often intense, and lying on his hard bed he was many times almost frozen alive, and had to drink a little brandy the first thing in the morning to warm himself. To add to his other discomforts, the rainy season came on; and to escape from the drenching torrents which almost drowned him, he marched towards Tibet, having to carry provisions for twelve days for himself and the sixty men who now formed his party. He was dressed in thick woollen clothes, and wrapped in blankets from head to foot, and yet he suffered extremely from the cold. 'This is a strange climate,' he writes; 'it snows moderately in winter, and there is no thaw for four months; it scarcely ever rains, but blows a violent hurricane every day at three o'clock, which lasts far on into the night. I often awake long before daylight, frozen through my five blankets.' Here he lived upon cakes of coarse wheat, and mutton hams so hard that it was scarcely possible to chew them. At last these hardships told even upon his indomitable energy; one evening, after a march of seven hours, he was seized with such dreadful internal pains that they almost brought on delirium. Fortunately this attack went speedily off; and in eight months he returned from his Himalayan expedition very thin and very brown, but with the appearance of perfect health, and rejoicing in the possession of a rich collection of plants, minerals, and organic remains.

While on the frontiers of Chinese Tartary he had received a kind letter from a countryman of his own, M. Allard, a French officer in the service of Runjeet Singh. On his return to Delhi he found a second letter from M. Allard awaiting him, recommending him, if he wished to travel in Cashmere, to obtain a letter of introduction to Runjeet Singh from the Governor-general. This was readily furnished to him by Lord William

Bentinck; and at the end of January 1831, having left his Himalayan collections at Delhi, he set out on his journey to the Punjab, intending to proceed ultimately to Cashmere. 'I have still the same horse,' he writes, 'which has carried me from Calcutta to the foot of the Himalayas. His temper is as bad as ever, but I am grown more cunning than he; and since I left Benares he has not thrown me once.' Mounted on this much-enduring charger he reached Loodiana, where he was met by an escort from Runjeet Singh, and was presented with much ceremony with a bag of money, as a present from the Rajah. A large basket of fruit and a vase of cream were also placed beside the door of his tent. He was six days' journey from Lahore, and every day until he arrived there this agreeable ceremonial was repeated. When he arrived at Lahore, a charming little palace surrounded by groves of orange trees and jasmynes was assigned to him as a residence. Here a splendid dinner was served up to him by torch-light, and he was waited upon by servants richly dressed in silk. 'I had courage,' he writes, 'to take as usual only bread, milk, and fruit.' Next day he had an interview with Runjeet Singh, who took a violent fancy to him; 'but his conversation,' he writes, 'is to me like a nightmare. He is almost the first inquisitive Indian I have ever seen, and his curiosity balances the apathy of the whole of his nation.' In the middle of March he parted from Runjeet Singh, who bestowed upon him a khelat worth five hundred pounds, besides a bag of money containing eleven hundred rupees. He heard at the same time from the administrators of the Jardin des Plantes that his pay was increased eighty pounds a year, so that the sun of prosperity shone brightly upon him when he began his journey to Cashmere. The road, a winding track up narrow mountain gorges, was rough in the extreme; and to add to his difficulties, he was taken prisoner by a robber chief, Neal Singh, from whom he only escaped by paying a ransom of five hundred rupees.

His horse, which had carried him so capably in all his former wanderings, now became very lame from the loss of its shoes, and he was forced to wade, and to wade through torrents of icy water more than waist-deep. All this made him so ill that he began to spit blood, and in April describes himself as in a pitiable condition. This illness he checked by sending his men to the neighbouring rivers to catch leeches, sixty-five of which he applied to his chest; while to cure the weakness produced by this loss of blood, he had two sheep a day killed, and ate as much mutton as he could. In the middle of May he arrived in Cashmere, and took up his abode in a charming little palace, situated in a garden planted with lilacs, rose-bushes, and immense plane-trees. His table at Cashmere was supplied by the munificence of Runjeet Singh; but he had little relish for the unfamiliar dainties served up to him, and was seized with an intense longing for bread and the light wines of his native France. He began indeed to suspect that a gradual but steady deterioration in his health, of which he first became sensible in Cashmere, was caused by the want of a small daily quantity of wine.

During the summer, which was exceptionally dry, he made excursions of nineteen or twenty days at a time into the mountains, from which he

returned with a large collection of new plants, and what he styles a specimen of a 'very respectable unknown quadruped,' a new species of marmot. On the 19th September of the same year he quitted Cashmere, having with him an escort of sixty soldiers, and fifty porters to carry his new scientific collections. On the road to Umritsir he met Gulab Singh, who gave him a fine white horse splendidly caparisoned, and a khelat with Cashmere shawls. He had also at Umritsir another interview with Runjeet Singh, who offered him the vice-royalty of Cashmere, with an annual revenue of two lacs of rupees (twenty thousand pounds); but this splendid offer he declined, and on the 21st of October took his final farewell of this Indian potentate. Returning to Delhi, he had a few days of pleasant intercourse with his old friend the Governor-general, followed by two months of incessant work in arranging his collections, after which he travelled by Ajmeer and Anrungalabad to Bombay.

The island of Salsette, which he visited, after quitting Bombay, in September 1832, was covered with pestilential forests; but in spite of these and of a burning sun overhead, he explored it from one end to the other, taking long and fatiguing marches on foot, and struggling with, instead of yielding to, his increasing bodily weakness. At last, on the 27th of October, he had an illness similar in nature to that which had attacked him on the confines of Tibet. There were the old intolerable fits of pain, which he tried in vain to combat with the old remedies. He covered himself with leeches, but their only effect was to weaken him: he tried the oil of Palma Christi; it was powerless. He grew worse instead of better, and at last had himself conveyed to the hospital for sick officers at Bombay. Here he lay for the whole month of November in great pain, but with hope to cheer him; then his sufferings became less, but the deadly weakness and sleeplessness increased. He knew now that he had abscess of the liver, and strove calmly to familiarise himself with the idea of approaching death.

A few months before, on completing his thirtieth birthday, he had written almost with repining regret, 'the half of life is probably past for me.' And now it was not without a supreme effort that he resigned himself to his fate. Life had been very dear to him. Steeped as it seemed to others in hardship and privation, it was full for him of the keen delight of pursuing and achieving, and sweet with the zest of frequent triumphs. Yet with characteristic self-abnegation he turned from the view of his case that peculiarly concerned himself, to think of some means of comforting his old father and favourite brother Porphyre. 'The cruellest pang,' he writes, 'my dear Porphyre, for those we love is, that when dying in a far distant land, they imagine that in the last hours of our existence we are deserted and unnoticed.' He then goes on to beseech them not to think of him as dying lonely and untended in a foreign land; but rather to picture him as soothed and comforted by the affectionate solicitude of the kind English friends, whose names he mentions the better to reassure their aching hearts. Long before these simple words of consolation had sped across the leagues of land and sea which divided him from those he loved, he had ceased

to exist. He died tranquilly and courageously on the 7th December 1832, a martyr to his beloved science.

As a Frenchman of his period, it was inevitable that Victor Jacquemont should arrive in India imbued with many prejudices against the British; and it is curious and interesting to note how his estimate of the British national character gradually and steadily rose. In his later letters he bears an unvarying testimony to the beneficence of the English rule. 'No other nation in Europe,' he says, 'would do so much for the inhabitants of a conquered country.' And again he speaks of what was formerly a very turbulent district of Rajpootana, 'as being in the highest degree sensible of the immense benefit conferred upon them by the British government.' What he principally objected to in the English were their luxurious habits and their costly refinements of comfort, which seemed to him to make the material side of life all in all to them. It was his fancy even that a special Nemesis in the shape of liver disease dogged in the land of their exile the steps of these insular Sybarites. 'The English,' he is never weary of repeating, 'have liver disease. What causes it? Four immoderate meals a day.' Nor was over-addiction to the pleasures of the gastronomie the only shortcoming he alleged against them. 'Oh, how sad it is,' he slyly insinuates, 'thus to see a whole nation afflicted with hydrophobia. For myself, I am safe; I drink water and milk, I live on rice as much as possible, and thus defy the scourge of the English.'

A sad commentary on these words is the premature death, which occurred in 1832, in the hospital for sick officers at Bombay.

#### STRANGE RECOVERY OF LOST ARTICLES.

MANY anecdotes have been told in our columns and elsewhere, of articles that have mysteriously disappeared, and that have been unexpectedly recovered after a lapse of time. Much interest having been manifested in the instances we have already placed before our readers, we venture to offer a new batch, which have been selected for us by a contributor whose good faith we can guarantee. She writes as follows:

We lived in the country, many miles distant from the town where father's aunt resided. She was a very old woman, and had some strange ideas, one of which was, that no kind of article of recent manufacture was—or ever could be—half so good as what was made in 'the good old times' when she was a girl. She loved everything that was old—old china, old pictures, &c.; but old lace was what she valued most. She had a passion for it, especially 'old point.' It was amusing to see the way she would gaze at it and the tender way she handled it; just as if it had feeling and she were afraid of hurting it. Every summer Aunt Katharine came to spend a few months with us, and we always looked forward with pleasure to her visit; for she was a kind-hearted old lady, and dearly loved us children, which was rather

remarkable, considering that we were not in existence in the good old days of her childhood.

One day Aunt Katharine called me up to her room, and opening her jewel-box, took from it some pieces of her precious 'old point.'

'Katie dear,' she said—I was called after her—'I think you are a careful little girl. I am going to wash these bits of lace; and can I trust you to take them to the garden to bleach for me? Will you watch them all the time, to see that they are not blown away or torn by the dogs?'

'Indeed, Aunt Katharine, I'll be dreadfully careful,' I answered. 'I'll never take my eyes off them till I bring them back to you.' And so I fully intended. But alas! my good intentions came to naught, as the sequel will shew.

I took the pieces of lace out to the garden, and spread them on the grass to dry, and sat a little way off watching them. The sun was very hot; so I thought I could watch quite as well if I went just a little farther away under the shade of a large chestnut tree. How it happened I don't know, but I fell asleep. I was roused by hearing the gong sounding for lunch. I jumped up quickly, my first thought being the precious lace. But where was it? Not where I had left it, certainly. It must have got blown behind the shrubs, I thought; and I searched everywhere, round and round the garden, and in every place I could think of; but in vain. The dreadful truth was only too apparent—the beautiful lace that had been intrusted to my keeping was gone! Never can I forget what I endured when I remembered that I had to go and tell Aunt Katharine about it. My mother was out, or I would have asked her to help me. But it had to be told somehow; so screwing up my courage as well as I could, I went up to her room, and standing opposite to her, a very picture of despair, said in a low sad voice: 'They're gone, Aunt Katherine—I can't find them anywhere.'

'Gone, child! What's gone? Not my bits of old point, surely?'

'Yes; Aunt Katharine. While I was watching them, I fell asleep; and when I awoke, they had disappeared. I have been for the last hour looking for them, but to no purpose. It is very strange what became of them; and I'm so sorry about it, for I know you'll be vexed with me; and indeed I didn't intend to fall asleep; but I could not help it.'

I must say Aunt Katharine bore her loss much better than I thought. Seeing how much upset I was at my carelessness, she tried to comfort me. 'Tis my own fault, Katie,' she said, 'more than yours. I ought to have remembered, "Old heads can't be put on young shoulders."'

No more was said about the matter then; and it was nearly forgotten, when about a year afterwards, one of the chimneys being found to smoke, a sweep was sent for. He found great difficulty in getting the brush up to the top, which was caused by some jackdaws having built their nests

right across it. As the machine was pushed up, it dislodged their nests, and down came such a collection of rubbish as I never saw before. Quite a cart-load of short twigs and bits of sticks; more than a dozen wooden bleaching-pins; old stockings and socks; and three or four thimbles, a silver one I had missed some months before being one of them. Then came an old night-cap and bits of all kinds of old rags. And yes!—in the midst of all this dust, soot, &c.—dirty and hardly recognisable—were Aunt Katharine's pieces of lace, which these rogues of j. kdaws must have stolen while I was asleep. At first I was afraid that they were totally ruined; but strange to say, they were almost quite uninjured.

I was standing with a friend one day in a shop where she was making some purchases. Amongst the change which she received was a half-sovereign; as she was putting it into her purse it fell. We both stooped to look for it, but could not find it anywhere. There was no chink or crevice in the floor that it could have rolled into; so we were quite puzzled as to where it could be. We searched our pockets, shook our dresses and handkerchiefs; but all our efforts to find it were useless; so we gave it up at last, and returned home, wondering what became of it.

Some months afterwards, as I was going to church one Sunday, a sudden shower came on, and I hastily opened my umbrella. Hardly had I done so, when I heard some one call my name. I looked round, and saw a friend close behind.

'How fast you are going,' he said. 'I called you twice before you heard me.'

'I was hastening on out of the rain,' I answered, 'as I had no shawl or cloak; and it was by the merest chance I brought my umbrella, the morning looked so bright and sunny.'

'Tell me, Miss Marsden,' he said, 'do half-sovereigns always fall out of it when you open it?'

'I don't understand you,' I replied. 'Half-sovereigns fall out of what?'

'Your umbrella,' he answered. 'When you opened it now, this one fell from it.'

'That is very strange,' I said. 'It certainly is not mine, and how it could have come there is most unaccountable.'

On thinking over the circumstance some time afterwards, I remembered I had this same umbrella with me the day my friend and I were so puzzled about the half-sovereign she dropped in the shop. It must have got between the silk and the small piece of leather which is put at the top inside to prevent the ribs coming through. Why it had not fallen out before, I could not tell; but most likely it was dislodged from its hiding-place by the sudden jerk I gave the umbrella in my haste to open it.

The anecdotes which might be told of long-lost rings are so numerous that I will only select a few.

At a friend's house one evening, a lady present, who was a good musician, was requested to sing. Before doing so, she took off a very handsome diamond ring, saying it was rather large for her, and used sometimes to fall off her finger when she was playing. She laid it with her gloves on the piano near her. She had a beautiful voice, and was asked to sing song after song, which she

did in the most obliging manner. As she rose from the piano, she was going to replace her ring, but it had disappeared. The gloves were there safe enough, under some pieces of music, but no sign of the ring. Search was made immediately everywhere that it was possible a ring could have fallen, to no purpose. Mysteriously it had vanished, but where to no one could tell. Two years went by without any tidings of the missing ring, when one day a strange kind of jingling noise was noticed in the piano. A tuner was sent for; and on the works being examined to see what caused the noise, he found the diamond ring, which had somehow got within the wires when the position of the piano had been changed a short time before.

I had been made a present of a very beautiful half-hoop emerald ring by my uncle, who brought it to me from India, and accordingly I valued it very much, and always wore it. One day, on my return from a morning concert, I missed it. How or where I had lost it I did not know. I remembered perfectly well seeing it on my finger in the concert-room, for I had taken off my glove to arrange the opera-glass. I looked in all directions for it. Thinking I might have dropped it in the street, I had bills printed and posted everywhere, offering a large reward for its recovery. But as weeks and months went by and I heard nothing of it, I gave up all hope of ever seeing my favourite ring again. It was nearly six years after that, noticing the lining of my muff had become rather worn, I ripped it off, to measure what quantity of silk would be required for relining it, when I thought I felt something hard in the stuffing. On taking it out, what was my delight to see once more my much-valued, long-lost emerald ring! Though I did not distinctly remember it, I must have had the muff with me the day I was at the concert, and my glove being off, in some way or other the ring must have slipped in through a rip in the silk lining.

A gentleman sitting at an open window, being called out of the room, left on the window-sill a small gold pencil, with which he had been writing. When he returned in a few minutes no pencil was there. This appeared very strange to him, for no one had entered the room while he was away; so he was completely puzzled as to where it had so quickly disappeared. The window was at the top of the house, so no one could have got to it that way. Next autumn, when the leaves were off the trees, a bright object was seen hanging from the very highest branch of a large beech-tree. With some difficulty it was reached, and proved to be the missing pencil, which had a short piece of black cord fastened to it. As the trees about there were known to be a favourite resort of magpies, it was thought that one of them had snatched the pencil off the window-sill, as they are well-known thieves of any shining objects; and most likely the cord had caught in the branch and held, before the magpie could convey it to his hiding-place.

Strange and unaccountable as it may appear, it is nevertheless a fact that the whereabouts of missing articles have often been revealed by dreams. The following instances have been told to me by persons of undoubted veracity, who could have

no possible motive for stating what was not true.

John Callaghan was a well-to-do farmer, residing in the County Cork. He was a sober steady man, and had never been known to be behind-hand in paying his rent. Though his farm was not very large, still by good management he was able to support his family comfortably out of it. There came one summer, however, that the weather was so bad that nearly all poor John's crops failed, so that when rent-day came he had no money to meet it. There was only one thing to be done under the circumstances—he must sell some of his stock. He regretted much being obliged to do this; but he had no other alternative, if he wished to retain his farm, for the agent was a very hard man, and would soon turn him out if he did not pay punctually. So the next fair day, John took two of his best cows and some fat pigs to sell at the fair. He spent all day there, trying to get a good price for them, and at last he succeeded in doing so. He was very tired on his return, and looked so ill that his wife remarked it to him. Assuring her that it was nothing but over-fatigue, and that he would be all right in the morning, he told her that he had sold the cattle very well, having got fifty pounds for them, which was enough for the half-year's rent, and something over. He went to bed immediately after his supper, and soon fell asleep. Next morning, however, his wife wondered he did not answer her when she spoke to him. At first she thought he was in a faint, and sent at once for a doctor, who pronounced him dead. It was supposed that the anxious state of his mind and the over-fatigue he had gone through the day before had hastened his death, his heart having been affected for some time past.

Poor Mrs Callaghan got such a shock by this sad occurrence, that at first she did not think of looking for the money her husband said he had got at the fair; but as the rent was due, and accounts came in for the funeral, she went to the place where her husband usually kept his money. Her search was fruitless; no money was there! She looked in the pockets of the clothes he had worn, and in every press and drawer in his room. It was all in vain. The fifty pounds could not be found anywhere. Could he have lost it on the way home? Or had he been robbed? Perhaps so. He certainly said he had got the money; but she had not seen it with him. It may have been only promised to him by the parties he sold to; but that was not likely. The poor woman was in a sad way, and spent all her time in searching for the missing money, and could think of nothing else. In a few days the agent was to call for the rent; and if she could not pay, she and her helpless little ones would have to leave their dearly loved home, and either beg or starve. Such was the state of things, when the very night before the agent's expected visit, Mrs Callaghan dreamed that her husband came to her, and told her that she would find the fifty pounds pinned to the paper behind the looking-glass over the chimney-piece in the bedroom. He put it there for safety, he said, fearing the house might be robbed, as it was known he brought the money with him, and he thought it would be safer there than in the press. The moment Mrs Callaghan woke she went over to the place mentioned by her husband

in her dream, and to her inexpressible delight, found the bank-notes in the exact position he had described!

A young lady had a present of a very valuable watch. One day, however, it suddenly stopped; and not wishing to meddle with it herself, she took it to a watchmaker to have it repaired. In a few days she called for it; but it was not done; so she said she would come again in a day or two. That night she dreamed that the watchmaker's shop would be burned next evening; so early next morning she asked her sister to call for her watch, and not to leave the shop without getting it. Her sister said she was sure it would not be ready. 'No matter,' she said; 'get it for me as it is, done or not. Don't come back without it; for the shop will be burned this evening; I know it will—I saw it all in a dream last night.'

Immediately after breakfast, her sister went for the watch; but was told it was not yet mended. 'How long will it take to do?' she asked.

'About an hour,' the man answered.

'Very well then,' she said; 'I will wait for it.'

So she sat down and waited patiently until it was repaired, for her sister was in a most excited state of mind about it, and would have been greatly annoyed if she had returned without it.

That evening at seven o'clock the house took fire, and the flames spread so rapidly that it was impossible to save anything; and had the watch been left there, it would have been destroyed with other valuable jewellery.

A young man, a bank clerk, when making up his accounts one day, found he was short one sovereign. He was puzzled as to what had become of it, and feared he must have paid it away by mistake. Be this as it may, he had to make good the loss, and refund the coin to the bank. One night he dreamed that in a chink of his desk he saw the sovereign. He looked there next day, and found it in the very spot where he had seen it in his dream!

A friend who lived in the country had for some time past been missing various things. That there was a thief in the house could not be doubted, but who it was, it was impossible to find out. Bread, meat, butter, bottles of wine, ale, &c. all disappeared in the most unaccountable manner, and always in the night. That none of the servants left the house at night was an ascertained fact, and it was equally certain that no one entered from without. How then were the articles conveyed away? And by whom? These were questions which puzzled Mrs M——, and caused her a good deal of anxiety. At last she dreamed one night that she was standing in the garden; and looking towards the house, she saw in the moonlight a man's figure glide up the avenue, and stand under the window of one of the servants' rooms. Presently the window was softly opened, and a basket well filled with provisions was let down by a rope. The person below untied the basket, and quickly disappeared amongst the surrounding trees. The rope was then drawn up again, and the window very gently closed. On awaking next morning, Mrs M—— told her husband of her strange dream. It made such an impression on

her, that at length she persuaded her husband to watch in the garden that night. So accordingly he and one of his sons stationed themselves in a little summer-house in the garden which commanded a view of the window in question. I may as well mention that neither of them had the least faith in any kind of dreams or visions. What then was their astonishment when they beheld the very figure described by Mrs M— glide softly up the avenue and stand under the window, which was opened and the basket let down, all exactly as she had told them! Before, however, the man had time to make off, they rushed out and seized him. He was brought into the house, and the police were sent for. They immediately recognised him as a very bad character, a returned convict. The wretched woman who was his partner in guilt was his mother. They were both tried at the next assizes, and punished as they deserved.

### A CUMBERLAND LEGEND.

On a fine evening in the summer of 1766, two young women, Maggie Armstrong and Eliza Wilson, met at a roadside well not far from the village of Distington, about four miles from the town of Whitehaven. On the ground beside them were the pails, or 'handles' as they are called, in which they were about to catch the fine spring water as it fell from a wood-conductor into the stone trough beneath. Each had on a gingham 'bedgown,' fastened tightly at the waist, and covering the plaited top of a comfortable-looking skirt which supplied the place of a frock. A threefold calico hat, closely quilted in diagonal rows of needlework, covered their heads, on the top of which was a round cushion stuffed with cotton or wool, whereon to place the 'handle' when full of water, and which served the twofold purpose of easing the head and steadying the water.

'The celebrated Mr Wesley is in Whitten [Whitehaven], Maggie,' remarked Eliza in an off-hand sort of way, 'and is to speak in the market-place to-morrow night. Will you go with me to hear him?'

[This journey to Whitehaven had nearly proved fatal to the enterprising missionary, as the following extract from his journal shews: 'Tuesday, June 24, 1766.—Before eight we reached Dm-fries, and after a short halt we pushed on, in hopes of reaching Solway Firth before the sea was come in. Designing to call at an inn by the Firth side, we inquired the way, and were directed to leave the main road and go straight to the house, which we saw before us. In ten minutes Duncan Wright was embogged; however, the horse plunged on, and got through. I was inclined to turn back; but Duncan telling me I needed only go a little to the left, I did so, and sunk at once to my horse's shoulders. He sprang up twice, and twice sunk again, each time deeper than before. At the third plunge he threw me on one side, and we both made shift to scramble out. I was covered with soft sand from my feet to the crown of my head,

but not hurt at all. Next day I rode on to Whitehaven, where I spent the rest of the week.']

'I will accompany you to Whitten, Eliza,' promptly replied Maggie. 'I've often felt a wish to see the famed man; so, all being well, I'll get ready and go with you.'

'Will you ask Richard to come, Maggie?' put in Eliza with characteristic zeal, as they both lifted the pails on to their heads.

'I judge he will follow when he finds that I'm gone,' quietly responded Maggie.

It need scarcely be observed that the young man referred to was one who had for some time past paid certain attentions to Maggie, or that Eliza Wilson was an ardent Methodist.

Saturday night came, and among the many who were gathered around the enthusiastic little preacher were the two young women we have brought before the reader. They came with sentiments as divergent as possible in respect to the preacher and his preaching. They returned one in mind and heart. The result of this change in Maggie was that she was cold to Richard Brunskill on the way home, and unsympathetic. From that hour Richard was no more to her than any other youth. The first time he went to her home after that night he was told his fate in a mild but firm manner; a decision which he received with anything but complacent feelings.

Up to this time Brunskill had been a comparatively steady man, only now and then indulging freely in drink; but after his loss of Maggie, he was often the worse for liquor, and rushed to every cock-fight and other brutal sport to which he could find access. Maggie Armstrong developed into a most ardent Methodist, so that what with the gravity of her deportment and her subdued conversation, her old friends scarce knew her. Eliza Wilson was her constant companion, nor did any one rival her in Maggie's affections for some time. But summer had not long given place to winter before a change took place. A young man named Thomas Musgrove, who had recently begun to use his gifts as an occasional preacher among the Wesleyans, arrested Maggie's attention. He was a builder in a fair way of business on his own account; and as Miss Armstrong possessed considerable personal charms, her secret preferences for him were soon drawn out by his avowed attachment to her; and before long it was well known by all the brotherhood and others that these two young folks were likely ere long to become man and wife.

Matters were in this condition when midsummer came round. It was again the 'leafy month of June,' when once more the famed apostle of Methodism paid his annual visit to Whitehaven, and every Methodist in Distington was overjoyed at the prospect of hearing his welcome voice on the following Saturday night in the market-place. Amongst those who walked from Distington to hear him were Thomas Musgrove and Margaret Armstrong. A small dog belonging to the former accompanied them. The service did not last much over an hour, as Mr Wesley wished to meet his country officials, that he might aid them by his counsels. As Musgrove was one whose presence was required at this gathering, and as it was not certain how long he would be detained thereat, he desired Maggie to go home with the others, observing that he would not

fail to give her a call on his return and spend an hour or so with her. The dog Viper might go back with her, he said, as it would be awkward to find him a suitable place to remain in while he was at the meeting. So bidding the company good-night, he went on his way. Poor fellow! Little did he anticipate the fate that was in store for him. He had not gone far before, on looking behind him, he saw Viper at his heels, looking shy, for he knew that he had disobeyed orders. Nothing remained, however, but to take the dog with him, and make the best arrangements he could for its safe keeping.

The company from which he had parted went on their way, and as they left Whitehaven they met Richard Brunskill coming into it, the worse as usual for liquor. He saw his old lover in the group which he had stopped to survey. But the people passed on, and Richard was soon left far behind. This was the last they saw of him that night. On went the merry party, singing hymns as they went, some dropping off at Parton, others at Moresby and Sunny Brow, and the residue reached Distington full of satisfaction and pleasure. It was just nine o'clock when Maggie Armstrong entered her house. Musgrove was expected back in about an hour.

When ten o'clock arrived, Maggie began to listen for his footfall. But it came not. She grew anxious; and as the finger of the clock rose towards eleven, she went to the front door and looked down the road. It was a fine, warm, clear night. Now a horseman passed by, then a conveyance rattled past; at intervals a pedestrian went slowly on, her hopes that it might be Thomas giving way with his departure. 'What can have kept him until now?' she said aloud, her uneasiness overcoming her maiden diffidence. It was now fast approaching midnight; still Thomas Musgrove made not his appearance. She sat down before the kitchen fire, vainly striving to think pleasant thoughts; so again rising, with a sigh, she went once more to the door and looked down the road. A long time passed, but never a footfall. Concluding that Thomas had been detained against his will, she was about to re-enter the house and go to bed, when Viper made his appearance, whining dismally. Surprised at this, she spoke kindly to the poor beast, and asked him where his master was. The dog looked up in her face with a scared uneasy expression; and in gazing into his face she saw that he held something in his mouth. 'What have you got there, Viper?' she asked, holding out her hand for the article which the sagacious creature laid in her palm. It was a piece of blue cloth with a brass button attached. She looked at it, wondering where the dog had got it and what it signified. At a glance she saw that it did not belong to any garment that her betrothed had on that night, and so far she was at ease. But on watching Viper, she saw that he became more disturbed and anxious, for he ran about the house and to the door, looking earnestly at her the while, as though he wished her to go with him somewhere.

Excited and perplexed, she awoke her father, and told him the circumstances. The old man dressed and came down-stairs. A consultation was held, which resulted in a resolve to await the arrival of daylight ere they took action. Day would dawn, they knew, soon after two

o'clock, when, if Thomas did not arrive, they would get assistance and search for him, being now certain that some evil had overtaken him. Thus resolving, the pair sat down by the fire and to beguile the time the old man lit his pipe. At last, when day broke, Armstrong aroused a neighbour, and telling him what he knew and feared, the pair set off on the road to Whitehaven, preceded by Viper. They had not gone above a mile before the dog, leaving the high-road, made for an unused stone-quarry a little off the highway, and standing on an eminence which flanked the quarry, set up a loud and dismal howl. The two men followed Viper into the quarry, which they entered by the cart-road which wound around the base of the hillock on which the dog stood. On entering the road, their eyes fell on a partly dried-up pool of blood; and as from thence to the quarry they saw patches of the same ominous fluid, their worst suspicions received strength.

'Something is not right here,' said Armstrong, as he gazed at the blood.

'You may reckon on foul-play,' responded his companion, as he watched the dog, which was creeping down the mound into the quarry.

The men had scarcely turned the corner of the hillock before they saw the object of their search stiff, cold, and covered with blood, his clothes nearly torn from his body. It was evident that poor young Musgrove had been murdered. He had been attacked from behind by some one who had used a heavy blunt implement, by a blow from which he had been knocked down, and then dragged into the quarry, and despatched; the poor dog having doubtless been a helpless witness of the tragedy.

When the sad intelligence reached Margaret, she felt what words cannot describe. Days and nights of agony, which sleep often refused to alleviate, were her lot; and many came to comfort her in vain. Eliza Wilson was the one whose company and words gave her the most comfort.

The murder of Thomas Musgrove produced a deep and wide-spread sensation. Many persons were suspected of having committed the deed, among whom was Richard Brunskill. But as the murdered man had not been seen in his company on that fatal Saturday night—as indeed Brunskill proved that he had left the town alone—and others testified that Musgrove did not leave the town until long afterwards, Richard was allowed to remain at large; and the crime was laid at the door of 'some person or persons unknown,' and left to take rank with undiscovered homicides.

Time is the greatest alleviator of grief. No matter how terrible the event, or how poignant the accruing agony, we gradually rise into our normal condition, and can review the trials of the past with a measure of composure. What a merciful arrangement of Providence is this! In less than a year Maggie Armstrong had regained part of her former cheerfulness, and was able to discharge her domestic duties with ease. Still her loss, and the way in which it had been brought about, never left her thoughts for long; nor could she help laying the crime in her secret thoughts to the charge of Brunskill. And here it may be mentioned that soon after the verdict of the coroner's jury had been given, he left Distington, and went to live a few miles from Whitehaven, in

an opposite direction. He now drank hard; but it was not often that he took part in public sports, for he was disliked by his fellow-workmen; seeing which, he kept aloof, solacing himself with dissipation, and spending much of his spare time in bed.

It will be remembered that when the dog Viper entered Armstrong's house on the night of the murder he had a piece of blue cloth, with a brass button attached, in his mouth, and which he laid in Maggie's hand. This the girl put into her purse, more with the view of knowing where to find it, if wanted, than for any other assignable reason. But many a time afterwards, when she had occasion to open her purse, and the piece of cloth met her eyes, she imagined that it must have been a piece of the coat of the murderer, dragged off by the dog when its owner was in a stooping posture; and each time this thought arose in her mind, she put the rag back into her purse, believing that even yet it might aid in the solution of the mystery which hung over poor Musgrove's fate. Nor was she misguided in her belief.

Twelve months had passed, when business drew her and her father to the town of Whitehaven. As usual it was on a Saturday night, the pay-time of colliers and others. At the period of which we write, the small stream called Poe-beck, which runs through the market-place on its way from St Bee's Vale to the harbour, was uncovered; and here and there a bridge, consisting of a plank or two, was laid across it for the convenience of foot-passengers. Maggie and her father, with Viper at their heels, had occasion to cross one of these bridges. As they did so, whom should they confront, as they reached the other side, but Richard Brunskill, who was about to step on the planks! The eyes of Miss Armstrong and his met in one stern and earnest gaze; but while they were awaiting the making up of their minds as to what course each should take, their attention was arrested by something that was going on at their feet. Viper, growling with all his might, his eyes ready to leap from their sockets, and the hair on his back standing up like the teeth of a comb, was pulling at Brunskill's trousers' leg, evidently for the purpose of arresting his progress. In a moment Maggie's convictions were confirmed that the slayer of her intended husband stood before her. She remembered the piece of cloth in her pocket. Looking at his coat, she saw that it was blue in colour; and the buttons in front, made of brass, were the same in size and pattern as the one on the rag in her pocket. Stepping behind him, and looking at the waist of his coat, she saw that a piece of cloth had been torn out, and another piece awkwardly inserted in its place, and bearing a button not like the others. Not a shade of doubt now lingered in her mind; the proof which she had in her purse, with the action of the dog, convinced her that the murderer of Thomas Musgrove stood before her. So, seizing him by the collar of his coat, and looking him steadily in the face, she exclaimed in a loud voice: 'Richard Brunskill, you are the murderer of Thomas Musgrove! See, the dog accuses you; and this piece of cloth rises up as a witness against you!' Saying which, she took the rag from its keeping-place, and held it up to his gaze.

Brunskill shook like an aspen-leaf. His face became ashen pale; and falling backwards into

the arms of one of the many who had by this time gathered together, he said: 'God won't let me escape! I am guilty of the death of Thomas Musgrove! I am willing to die!'

A constable, attracted by what was going on in the neighbourhood, drew near just as the wretched man had uttered these words, and took him into custody. On the Tuesday following he was taken before the magistrates. He had no defence to make when the facts already narrated were brought before them, and was committed to Carlisle jail to await his trial. Acting on the advice of his lawyer and friends, he pleaded 'Not guilty' to the charge when placed in the dock; but the jury were constrained by the facts brought before them to convict him, and in due time he was sent to the gallows. Another instance among many before and since this one, that 'murder will out.'

Brunskill made a full confession of his crime before his execution. He said that when he got to know that Musgrove had gained the place that he once believed he had in Margaret Armstrong's affections, and seeing no chance of supplanting him, a deep-rooted hatred was begotten within him. But he never felt tempted to take his life until the night of the murder. Then, when he saw that he was not in the company of those who were returning to Distington, he concluded that he had stayed behind and would return alone. Then it was that the murderous thought arose. So, entering a public-house in Tangier Street, he drank a glass or two of rum, and bought a small bottle thereof wherewith to fortify his courage on the road. He then set off to Distington. As he went along, he resolved that the deed should be effected in the old quarry. On reaching it, he hid behind the stone-stoop of the gateway that led thereto, and in a while he heard the footfall of his unsuspecting victim. Taking a deep drink of rum, and grasping the hedge-stake with which he had armed himself, as soon as the young fellow reached the spot where he was hid he sprang up and killed him by a blow on the back of the head, after which he dragged him into the quarry. The dog, he said, was almost wild with rage; but he was not aware until afterwards that a piece of his coat had been torn away by the animal, nor did he ever suspect that it had been found and treasured up to be a witness against him.

Such is the story of a long-forgotten event, which the writer used to hear an aged relative relate years and years ago—an event which, committed within a couple of miles of where her mother lived at the time, was long the subject of conversation.

#### LOOK TO YOUR EATING.

A LADY of our acquaintance had lately occasion to visit the shop of a person who deals in hams, cheeses, and other edibles. Looking round the large stock of goods for sale, she made the remark to the shopkeeper: 'You must surely often incur heavy losses by articles getting stale and out of condition for food.' 'Not at all,' he replied. 'We at times lose a trifle by things getting wrong on our hands; but it is not worth speaking of; for whenever hams and other articles get very bad, we dispose of them to small dealers who readily

find purchasers, on Saturday nights, in poor people who are looking about for bargains.' This reminds us of the beneficent saying, 'Whatever is totally uneatable, you may give to the poor folk.' Others than absolutely poor folk are apt to be dosed by, or to dose themselves with articles because they are cheap, or more correctly speaking, low in price, and nearly if not altogether worthless. A ham, or a piece of pork, cannot be called cheap at any price if it be half rotten or any way tainted.

The advice, 'Look to your Eating,' applies particularly to persons who are continually looking out for bargains, and are disposed to run the risk of poisoning themselves by what should be buried out of sight. This remark is suggested by an article which recently appeared in the *Daily Telegraph* (January 14). Reference is there made to an incomprehensible illness that broke out in the reformatory training-ship *Cornwall*, lying in the Thames, off Purfleet. Several of the boys died, and were buried. To clear up the mystery, the body of one of them was exhumed; and the examination revealed that death had been caused by trichiniasis, a disease which arises from eating putrid pork. 'The meat was bought, it seems, as cheap "American pork," and as this description of food is growing in popular favour, it may be as well to warn people that they should be careful in making purchases of it. Not that the taint is confined to pork, or even American pork. It may lurk in all kinds of animal food. The "germs" of the disease—in this case excessively minute, but still, under a lens, clearly visible bodies—which are thrown off by the sufferers, may find their way into drinking-water, and convey the malady to man himself as well as to other animals. When it is clearly understood how the plague originates, it is easy to take simple precautions against its diffusion, and therefore it is fortunate that as to the origin of it there is no doubt whatever. It is now some five-and-forty years since a junior medical student in one of the London hospitals, struck by the existence of strange little yellowish and grayish-white specks on some muscular tissue he was studying, thought of examining them under a microscope. Robert Brown, the eminent botanist, was then among the few scientific men in London who had a good microscope, or indeed any skill in microscopy; and to him, as one notoriously fond of helping aspiring youth, the lad appealed for advice as to the curiosity he had lit upon. The veteran naturalist very kindly set the student on the right road of research; and the result was that they discovered the mysterious specks to be tiny, transparent capsules or cases, inside each one of which lay comfortably coiled up a delicate little worm, not nearly so thick as the thinnest thread of shining gossamer. From the Greek word for a hair—*thrix*—the creature received the generic name "*trichina*." From its being rolled up like a coiled spring, it was specifically distinguished as the "*spiral trichina*," or "*trichina spiralis*." Professor Owen some time afterwards confirmed this discovery of the young medical student and his distinguished patron; but for all naturalists the real mystery then was: How did the parasite find its way into the very midst of muscular tissue in the human subject? It has been at length ascertained that the larvæ

of the creature find their way from the stomach to the exterior muscles, where they are developed in millions, and give rise to the disease which proved fatal to the boys in the training-ship.

Though, on a former occasion, we took notice of this disease, the circumstances now mentioned will excuse our return to the subject. We would earnestly caution people to look to the nature of all pork and other kinds of meat offered at a low price for their consumption, particularly cured meat sold in barrels and which has been kept some time. For the sale of diseased meat of every description, magistrates ought to inflict all proper legal punishment without mercy.

#### H O M E W A R D.

From the plane-tree's windless leaves  
Breathes the wood-dove's amorous moan;  
Round about the cottage eaves  
Hangs the rosebush, over-blown.  
Meadows dip to where the stream,  
Murmuring of the far, blue sea,  
Moves, as in a flower-sweet dream,  
By the home that waits for me.

And I know one heart beats high  
With this joy that gladdens mine,  
Underneath that northern sky,  
Waiting in her trust divine.  
Singing in the sun, sits she,  
And her eyes are blue and blithe,  
And the maid-child on her knee  
Laughs to hear the sweeping scythe.

Seems it, even now, I feel  
The hay-sweet scent of English air,  
And the slumberous, old mill-wheel  
Murmuring 'peace and plenty' there.  
Blow, blow northward, eager gale,  
Though thou rouse the billowing sea;  
Whisper in the bending sail,  
Of the love that waits for me.

By Egyptian sand and palm,  
By the pillared fanes of Greece;  
High amid this cloudless calm,  
Sleeping in their dreamless peace,  
Drifting, I am longing sore  
For the last glad league of sea,  
For the roses by the door,  
And the welcome kept for me.

## CENTENARIANISM.

THE believers in the venerable Countess of Desmond, in Old Parr, and in Henry Jenkins, have within the last few years received many rude shocks to their faith. The late indefatigable Sir George Cornwall Lewis—who, amid the turmoils of official and parliamentary life, found time to attend to numerous and varied studies of other kinds—expressed a doubt whether there is any thoroughly conclusive evidence, such as would satisfy both logicians and lawyers, of a person (in post-Biblical times) having overlived one hundred years. He declared that in every case he had examined there was some loophole or other, some necessary link in the chain missing. When this startling bit of incredulity appeared in *Notes and Queries*, it invoked a multitude of communications relating to persons who, in repute at anyrate, were very much more than a hundred years old at the time of death; and when similar incredulity was half expressed in the *Times*, it was followed by a renewed series of protests, chiefly from persons conversant with and believers in the literature of tombstones and parish registers. The late Mr Dilke agreed pretty nearly in opinion with Sir George; and Mr Thoms has more recently investigated the subject at great length and with unwearied assiduity.

It is unnecessary, even if possible, to detail or even to enumerate the recorded instances of people who have exceeded the age of one hundred years. They are to be reckoned literally by hundreds. Even now every newspaper reader meets with reported cases; each usually a mere bald statement of the fact or alleged fact that so-and-so had died at the advanced age of 100, 105, 110, or what not, without citing any evidence in support of the allegation.

To shew how numerous are these stories, it may suffice to say that in the early part of the present century a volume was published containing the names of more than *seventeen hundred* persons who had claimed to be centenarians, or for whom a claim was set up by others. The compiler was in

nowise particular; he accepted all the fish that came into his net. He went up to nine-score years in his enumeration, and was apparently quite willing to believe any story of a 200-year old phenomenon.

As before remarked, we have no space to devote to these marvels in the bulk; but there are three already briefly mentioned, concerning whom a few words may be given—namely, Parr, Jenkins, and the Countess of Desmond.

Thomas Parr, according to the popular account, was born in 1483; remained a bachelor till eighty years of age; married in 1563; lost his wife in 1595; married again in 1603; and lived to see the year 1635. In that year the Earl of Arundel visited him, and was so struck by his venerable appearance as to invite him to his town mansion. Parr was brought by easy stages to London, where he became quite the lion of the season. Charles I. requested to see him, and asked whether, as he had lived so much longer than other men, he had experienced and known more in proportion. 'Yes, your Majesty,' replied the old man; 'I did penance at the age of 105.' This penance was for some peccadillo he had committed. The veteran found the excitement of London too much for him; the fatigue, the crowding of visitors who came to see him, and the unwonted luxury of his diet, carried him off at the wonderful age of 152.

Henry Jenkins, according to the popular account, was born in 1501. When a boy, he carried a horse-load of arrows to Northallerton, to be employed by the English soldiers in resisting the invasion by James IV. of Scotland; and he lived to see the year 1670, when he died at Ellerton-upon-Swale, at the marvellous age of 169.

The Countess of Desmond is reputed to have been born about 1464, and to have lived on till about 1604, attaining the age of 140. No other very aged person has attracted so much notice as she. Bacon, in his *Natural History*, said that she 'did denture twice or thrice, casting her old teeth and others coming in their place.' Sir Walter Raleigh stated that she was

married in Edward IV.'s time; and that he himself saw her in 1589. Sir William Temple was told a similar account by Robert, Earl of Leicester. Numerous minor incidents of her life have been recorded.

Though still credited by many believers in extreme longevity, there are others who thoroughly disbelieve in its possibility—or at any rate, probability. Their grounds of unbelief are varied. In the first place, most of the alleged instances occur in the humbler grades of society, where registers and formal entries are but little attended to; the middle and upper classes, among whom authentic records are more plentiful, occupy comparatively small part in these narratives. 'Can actuaries,' it has been pertinently asked, 'refer us to a single instance of an assured person living to one hundred and forty, thirty, twenty, nay, even to a hundred and ten?' If an entry of a birth or a baptism is found in a family Bible, there is usually no proof that it was written in the lifetime or at the time of death of the person to whom it relates. In one case, a clergyman investigating a story of centenarianism, found that the Bible containing the entry was not printed and published until forty years after the alleged birth; and no other testimony was forthcoming. Registers of births were not formally established until about 1830; all such registers before that date were voluntary, and therefore uncertain. Even parish registers are not always reliable, seeing that many of them, giving the year of death, mention the age of the deceased, but not the year of birth, thus affording no means for correcting one date by the other.

Sometimes tombstones are re-chiselled, to restore the half-obliterated inscription; and then the village stone-mason, puzzled by some of the partly obliterated figures and letters, makes a guess at them, and puts in the age or date which seems to him the best interpretation. There is, or was, a tombstone in Conway churchyard recording the fact that Lowry Owens Vaughan died in 1766 at the age of 192; and that her husband William Vaughan died in 1735 at the age of 72. If this were so, the lady must have been nearly 100 years old at her marriage. As the figures on the stone have been found on careful examination to be comparatively freshly cut, it is supposed that 192 was an inaccurate re-cutting of an earlier incision. Some instances of this kind are most ludicrous. A tombstone in Cleve Prior churchyard records the death of a person at the astounding age of 309! This is supposed to have been a country mason's way of denoting 39, that is, 30 and 9—a kind of error, as explained by us in the article 'Eccentric Returns' (Feb. 7), not infrequent among ignorant persons. The *Times* noticed several years ago that the register of Shoreditch parish contained an entry relating to Thomas Cam, who died in 1588 at the age of 207, having lived in the reigns of twelve sovereigns. As Sir Harry Ellis, in his *History of Shoreditch*, put down the age at 107, the register was examined. It was found that 1 had been altered to 2 rather recently, possibly by some wag who wished to poke fun at the antiquaries.

Instances of the following kind are known to have occurred. A young married couple have a son whom they name (say) John, who dies in infancy; twenty years afterwards another son

receives the same name; and then, in neighbours' gossip long afterwards, the one John becomes confounded with the other, and a man really eighty years old figures in popular estimation as a centenarian. Many aged persons, it is worthy of remark, like to be considered older than they really are, on account of the celebrity it gives them. A Methodist local preacher, who had been in turn a farmer, a soldier, and a dock labourer, was wont to claim the age of 'over a hundred years'; he drew great crowds to hear such a phenomenon preach. He was probably sincere in his belief concerning his age, and at his death it was recorded as 108; but a subsequent investigation shewed that he was much less instead of more than a hundred.

In an early paragraph we mentioned the name of Mr Thoms. This gentleman has done more than any one else towards the investigation of alleged cases of ultra-centenarianism. As librarian of the House of Lords he was not much concerned in the subject; but in his capacity of editor of *Notes and Queries* for nearly a quarter of a century, he had to notice numerous marvels of longevity—some in support of popular opinion, some in refutation of it. He spared no pains; he wrote to clergymen and parish clerks, consulted local antiquaries, examined registers and tombstones, and conversed with old persons who were able (or claimed to be able) to give information relating to times long gone by. He found many instances of all the several kinds of fallacy which we have just mentioned; and arrived at a final conclusion that there are some cases of ultra-centenarianism, but that they were very few indeed. He never was so rash as to deny point-blank that such instances do occur; he simply asserted that only a very small number had borne the scrutinising tests he had applied to them. He published the details of his researches six or seven years ago; and his volume is justly regarded as the leading authority on the subject.

The mode of investigation adopted by Sir G. C. Lewis and Mr Thoms, often led them to examine the question: Who was the first person known to have mentioned the alleged fact? In regard to Old Parr, the chief authority was John Taylor the 'Water Poet,' an eccentric character in the reign of Charles I. He published a pamphlet concerning him at the time when Parr was in London; but he gave no proof that the veteran came into the world a hundred and fifty-two years before that time. Of Henry Jenkins, the chief informant was one Peter Garden, who died in Auchterless in 1775 at the age of 131, and who said that he had when a youth seen Henry Jenkins, the person that had carried the horse-load of arrows to Northallerton. But there is no guarantee for the exact age of Garden, nor for the correctness of his memory concerning events in which Jenkins was concerned. Similarly in the case of the Countess of Desmond; although it is evident that this venerable member of the Irish peerage lived to an exceptionally advanced age, nevertheless there are links wanting in the chain of testimony. 'They tell a tale,' said one of the authorities concerning the lady's age; but who were 'they,' and how did 'they' know? Raleigh did not name an authority for his statement that she was married so far back as the time of Edward IV.; nor do we know whether Leicester

was reliable in what he told Temple. Several portraits are extant, all purporting to be the Countess; but one is now known to represent some other lady, while the inscription on another is suspected to be comparatively modern. The *Quarterly Review* took up this subject some years ago, and was able to advance additional evidence of her great age, but not of her reaching the traditional 140.

Since the publication of Mr Thoms's volume, he has been regarded as a general referee on all such matters; and he has been asked to investigate many new instances. As usual, he found but few of the statements that could stand against the test he applied. We have not space to give more than a few lines on the subject. Application was made to the Registrar-general, or at least to his valuable annual Reports, for a record of the past experience of the National Debt Office and the various life-assurance Companies. There could be found only *one* case of ultra-centenarianism recorded by the Companies, and only *two* by the National Debt Office; whereas instances were to be reckoned by the score in other quarters. The Registrar-general in one of his Reports said: 'The district registrars have no authority, even if they had materials and leisure for so doing, to investigate the statements as to age made by the informants of death. These informants are alone responsible for the correctness of the statements.' In other words, the Registrar-general must depend upon report and declaration; whereas the National Debt Office and the life-assurance Companies insist upon actual proof of age. Hence the significant fact that the ultra-centenarians figure largely in the Registrar-general's tabulated returns, but scarcely at all in the books of the office and Companies just named.

One account, of quite recent date, led Mr Thoms to suspect a hoax. The newspapers, two or three years ago, stated that an aged gentleman met a circle of friends at the *Star and Garter* hotel, Richmond, to celebrate his 106th birthday. Mr Thoms for some time could make nothing of this story, either good or bad; but at length he stated: 'Information has just reached me that the reported centenarian banquet at the *Star and Garter* has been declared to be a hoax!'

Last summer a paragraph appeared in some of the newspapers: 'There is at present living in a Skye bothy old Widow Macpherson, who entered upon her hundredth year last Christmas. She was born there in the same year that Dr Johnson and Boswell visited Skye and met with Flora Macdonald. During the hundred years of Widow Macpherson's life she has dwelt in a turf hut, the smoke from the peat-fire on the hearth finding its way out by every crevice, and giving a lustre as if varnished to the rafters which support the thatched roof. She has survived six Lords of the Isles, the present being the seventh Lord Macdonald who has held this title since she was born. She has never been out of the island, and does not understand one word of English, but converses freely in Gaelic. She has been blind for ten years, but her hearing and memory are both good. She is nursed by her daughter Kirsty, who is unwearied in her attendance upon her old mother. The photograph of this relic of a past century has been recently taken; and as she is in very

humble circumstances, any profit arising from the sale will be devoted to procuring for her such comforts as her extreme old age and declining strength require.'

We have no reason to doubt the truth of this statement, and must conclude with a remonstrance against the practice of setting down all statements of the kind as being exaggerations or inventions. Scarcely a week elapses without a notice of the death of persons who have reached a hundred years of age. To assert that all these notices are false is little short of an impertinence. Here and there may be a mistake, but our belief is that the bulk of the notices are true. Nor is it strange they should be. It is notorious, from medical and statistical observation, that human life is lengthening. Old people are better cared for than they used to be, and there is a better knowledge in the art of preserving health. In fact, we have come pretty much to the conclusion that to die at an age short of eighty, ninety, or even a hundred, is very much people's own blame. With a good constitution to start with, and with exercising due care, man or woman may stretch out the span of existence to ninety, if not to a hundred.

## A LIFE'S ATONEMENT.

### CHAPTER VIII.—HISTORY.

*At the very soul of understanding dwells charity.*

FRANK, comfortably conscious of virtue, went back to Montague Gardens. There was something in the fact of having snubbed Tasker which soothed and calmed him. Tasker was the evil spirit of impecuniosity personified, and Frank having done battle with him, felt safe from extravagance for evermore. 'I am glad I insulted him'—so ran Frank's thoughts—'because I shan't be able to borrow from the fellow any more.' Reaching his rooms, he threw himself at full length upon a sofa, lit a cigar, and built castles. Is there anything pleasanter in the world—so queries the poet—than to enjoy delight with liberty? Frank just then combined the joy of stern resolve with the delight of liberty from labour. Happiest of moments, when a man can persuade himself in his laziest leisure that he intends to be industrious, and can draw in advance from the Bank of Fancy the reward of his own high virtue!

'And indeed,' said Frank, drawing a miniature from his breast, and taking it into his confidence, 'it would be really hard to go astray with such a guide as you are. Do you know—do you guess?'—he went on in a sort of lazy rapture—'how much I love you? Do you think how I will work and hope and plan and endure for you?'

The smoke curled lightly about his head. His eyes followed it with fancies as unsubstantial. Pleasant fairy palaces, too frail for permanent human habitation, he built, and for those brief moments lived in—thinking, like many another, that success is gained by dreaming of it, and that hopes will be fulfilled because he holds them. Still dreaming, after it had grown quite dusk, and the servant had brought in his lamp, he was startled—not altogether agreeably—by the entry of his fantastic friend Hastings, and two companions.

'Of what,' inquired Mr Hastings, airily removing his hat and arranging his hair before the mirror—'of what is the young man thinking, as he dreams on his horse-hair couch? Fairholt! I am in league with the Egyptians—burning with zeal to redress the wrongs of that ancient people, who, as a man of your reading is sure to know, were spoiled of their treasure by the Hebrews. I have taken in turn for them a little revenge in passing, and have spoiled a Jew. The Jew will eventually spoil me, I know; but for the moment Fortune smiles upon the ally of the ancient Coptic race.'

'What is your latest madness?' asked Frank, laughing.

'Great wits,' responded Mr Hastings with a grave flourish, 'to madness often are allied. I am in a gorgeous humour. Do you know—speaking with the utmost seriousness, and with as little egotism as possible—I am really convinced that I am a splendid fellow. To-night I am in more than usual form. I have spoiled that Hebrew, not in any vulgar way, but with an airy grace which is really indicative of genius. I flattered and soothed him. I touched him on his tenderest points. I lulled him into confidence; I led him to places of sweet rest and quiet breathing; and ultimately,' concluded the young gentleman with another solemn flourish, 'I landed him for ten pounds; and there's the money.' Throwing a loose handful of gold and silver on the table, Mr Hastings relapsed into a cheerful grin, and asked for brandy.

Frank bustled about and set decanters on the table. 'Who is your Hebrew?' he asked on his knees and with his head in a cupboard.

'There,' replied Mr Hastings, 'you touch me in a tender part. The Egyptians and I are content with small beginnings. Finally, we shall land the Rothschilds for a million, I have no doubt. At present, we are content to ply for humbler game. I have fleshed—or shall I say fished, to make the simile completer?—my maiden hook on Tasker.'

Frank, who had not been over-attentive to this speech, started so at the name that he bumped his head violently against the shelf of the cupboard as he rose to his feet.

'A kindred spirit leaps to meet me,' remarked Mr Hastings languidly, and uncorked a bottle of soda-water. 'League yourself with the Egyptians, Fairholt. I pledge you my solemn word of honour that the bait by which this small specimen of the land-shark was secured was my own unassisted note of hand.'

'No, thank you,' Frank responded. 'Egypt is cleaned out already, and Christendom is undergoing a similar process now. I have had enough of Tasker.'

'Do you know,' responds Hastings with an air of profound seriousness, 'I can imagine that to the ordinary palate a very little of Tasker would be eminently cloying? The taste for Tasker is in fact acquired. To be candid, however, I can discover one virtue in him—he can occasionally be induced to part with money.'

'He parts with it on very heavy terms,' responded Frank, going back to the cupboard, and rummaging anew there.

'The wisdom of our ancestors,' returned Hastings, 'is proverbial—at least a good deal of it is.'

In one scrap of that wisdom for which the foggydom of past centuries is justly famous, we are told that he who intends not to pay may promise much.'

Frank withdrew himself from the cupboard with a box of cigars in one hand and a bottle in the other, and answered lightly: 'If you were the rascal you profess to be, you might be even a match for Tasker.'

'Referring,' replied Hastings in a forensic tone, and with a forensic wave of his cigar, 'to the works of Thomas Babington Macaulay, I learn that the late Nicholas Macchiavelli was a highly amiable and moral person. Fortified by this judgment, I have looked up *The Prince*, and am humbly striving to carry out its precepts. My natural bent in favour of the conventionalities of virtue is strong, and I still occasionally deviate into candour. Let me be candid now. Tasker lent me this coin wholly and solely upon your account.'

'On my account?' asked Frank.

'On yours. I told him I was coming to your rooms. So far I was truthful. But now mark the Macchiavellian strain. I told him also that you had invited me. I told him further that you had invited several other fellows. When I lie—as I frequently do—I am generally prophetic. I am here, with some other fellows. Since we are here, you can't do less than invite us to stay. I told him further that we were coming for a quiet little game at *vingt-et-un*. You will, I am sure, produce the cards, and oblige me by the fulfilment of that prophecy also.'

'That prophecy must go unfulfilled,' Frank answered.

'Let us waive that point a moment,' resumed Hastings. 'Your friend Tasker, anxious to oblige you, loans the money instantly. Since I am pledged to candour, I will conclude by saying that the said Tasker hates you cordially, and lent me the money in the hope that I might win, and that you might lose.'

'I never quite know where to have you, Hastings,' said Frank, still laughing. 'But do you really mean this?'

'In my moments of candour,' Hastings replied with increased solemnity, 'Truth becomes the immediate jewel of my soul. My bosom is as glass, and the workings of my heart are patent to the meanest observer. When I put up the shutters and—if I may mix a metaphor—tread in the paths of dissimulation, I acknowledge that I am inscrutable. But now the simplest son of the desert may understand and know.'

'Do you mean seriously to tell me,' asked Frank, 'that Tasker was fool enough to express such a hope to a sieve of a fellow like you?'

'Example,' responded Mr Hastings, 'is contagious. My indulgence in metaphor touches that poetic string which ever vibrates in the artist's being; and he lisps in figures, for the figures come. I had forgotten the respectable simile of the sieve, or, despite my leaning to originality, I would have used it. In my candid moments, I am even as a sieve, holding back nothing I receive. I occasionally retain—I may add as an afterthought—a little moisture. Will you pass the brandy?'

'Was Tasker sober?'

'The worthy Tasker reeled—his victor's sport,

and ere I left him lay dissolved in port. On strict investigation—for I mark once more the Macchia-vellian strain—I find that quotation scarcely apt. Tasker remained so far solid as to be able to convey himself to the club door, whence he departed in a cloud of anathemas and a hansom.'

One of Mr Hastings' companions, who answered to the name of Bonder, and had evidently been out dining somewhere, bearing the evidences not only in his white tie and ample shirt-front, but in his flushed and lazy face, fell off into helpless hysterics at this statement. Hastings surveyed him with a solemn countenance; and turning to the other, who answered to the name of Brookes, and had also been out dining somewhere, and also bore about him the evidences of that fact in his white tie and ample shirt-front, and in his flushed and lazy face, opined that this game of *vingt-et-un* would have to be confined to three. On this Mr Bonder checked his raptures, and proclaiming himself as sober as a judge, asked Frank for the cards.

'Well,' said Frank, 'it would be too inhospitable to turn you fellows out. But I won't play cards, and I won't see cards played here.'

'Dost thou think,' demanded Hastings, 'that because thou art virtuous there shall be no more cakes and ale?'

'Come, come,' returned Frank. 'You can spend the evening capitally without falling into this eternal play. Honestly, I have come to the conclusion to give it up. I play no more.'

'His pipe is silent in the vale,' Hastings declaimed with tragic emphasis.

Mr Bonder fell off again, and was carefully brought to by Mr Brookes.

'Now, you know,' said Mr Bonder, looking round and gasping helplessly, 'that's uncommon fine. By Jove, sir, that's good—that's uncommon good!'

'Your appreciation, Bonder,' replied Hastings, 'of my humble efforts to please is not unvalued.' He said it with so serious a countenance, that Bonder fell off again, and was recommended by Brookes, the self-controlled, to go home if he couldn't behave himself.

'But,' gasped Mr Bonder, feebly struggling with himself, 'he's so uncommon rich, you know. Upon my word,' said Mr Bonder, brightening up as though he hailed a discovery, 'I can't help laughing at him.'

'Let him laugh who wins,' said Hastings. 'Mine host, the cards and a flagon of thy rosier. If you choose to cultivate the ascetic virtues, I am not the man to say you nay. Common courtesy demands that in your own chambers you should be permitted by your guests to adopt what rôle you please. But you will permit me to point out that the calls of hospitality are urgent, and that your guests desire to season life with a little innocuous excitement.'

'If you will play,' said Frank, rising with evident unwillingness, 'I suppose you must. Here are the cards. Amuse yourselves.'

The three drew near the table. Frank lighting a new cigar, left the room, took his hat, and strolled into the gardens of the square. Mr Bonder in his present condition was of opinion that 'this was the richest joke he had seen for ages.' Mr Brookes, on the contrary, grew solemn at the host's departure. Hastings underwent no change,

but remained the same gay, reckless, flippant creature, lost his money with an easy grace, and borrowed it back again only to relapse it. The three played for stakes which, considering their means, were ridiculously high, and became so absorbed in the game as to lose all memory of Frank, though remaining keenly alive to the presence of his decanters. Frank meanwhile, marching to and fro in the square gardens, congratulated himself upon his firmness. It would have been considered 'bad form' in the set in which Frank moved to object to an invasion of this kind, however insolently made; and Hastings was so old a friend, and Brookes and Bonder were such good fellows in their way, that anger would have been absurdly out of place.

'Now really,' said Frank, in communion with himself, 'I should have liked to play with those fellows—I should really have liked it.—I never said a word about it to you, my darling, in your hearing, but I promised it to you all the same. I have surrendered these old ways—I have done with them for ever. How could I be untrue to you, my darling, or untrue to the better hopes you woke within me? Through you, I can be my best—a poor creature even then, I fear—but better, oh, how much better than you found me!'

The moon shone brightly. Frank was in the very centre of the gardens, and quite alone. He drew the miniature from his breast and kissed it again and again. He looked at it—and dimly as he saw it in that dim light—he dwelt on the sweet face with a yearning love and worship. His heart rejoiced within him as he thought that he had escaped to moments so sweet, from that smoke-clouded room and that flippant converse. Following the track of the railway field by field and landmark by landmark, his spirit seemed to wing its way home, past the pleasant summer river, and past the moonlit fields to the park, and through it to the gardens—to the gate where he felt, by an intuition of spirit so strong that he almost knew it must be true, that Maud was standing and thinking of him, with just such a love and such a tender yearning. Ay me! how he thrilled at the thought! How sweet and dear the fancy seemed! He was all but bodily present with her. His whole heart melted and glowed as he stood there.

The highest rapture fails the soonest. Frank came back to himself. The moon was clouded and the night seemed chilly. He tried to project himself again; but Passion would not be whipped and spurred. It lay quiescent and made no answer. So Frank wandered indoors a little disconsolate, and the peal of laughter which came to him as he stood in the doorway was welcome. Hastings at the moment of Frank's entrance was walking gravely round his chair for luck; and since everything which Hastings chose to say or do was full of infinite jest for those young fellows the Messrs Brookes and Bonder, the solemn performance was provocative of much loud merriment.

Hastings with a face of the intensest gloom, and the voice and action of a transpontine Othello, accosted Frank: 'Behold the irony of Fate! Rich with barbaric Tasker's spoils, I enter these gilded halls. Now, how am I dwindled! But—thrice the magic circle wind.' Therewith Mr Hastings

completed his journey round the chair and resumed his cards.

Frank seated himself at the table and watched the game. The cards ran in favour of Hastings, and in a quarter of an hour that young gentleman had quite a pile of gold and silver beside him.

'A star has set, a star has risen,' he quoted oracularly; and turning, addressed Fairholt: 'Sit down and take a hand, like a Christian. Behold'—spreading his money gravely about the table—'behold the booty of my bow and my spear! I dare thee to the joust, thou Paynim knight! Couch, couch thy lance, and gird thee for the fight.'

'I don't care about it,' Frank responded.

If the discerning reader knows anything of the gambling spirit, and has ever looked on at a game of chance, not purposing to join it, he knows how dangerous it is. If the discerning reader knows anything of human nature, he will have observed that there is a kind of man in whom the very fervour of resolve breeds weakness. For such a man to resolve is more exhausting than it is to a man of strong will to act out a resolution. Frank's passionate longing after virtue has left him weakened for its defence. There are many men so constituted, unhappily for themselves. They are mostly souls capable of very ardent longings and very bitter remorse. Their virtue—such as it is—consists in a passionate and spasmodic longing after virtue. Their remorse, until such time as they grow case-hardened, is very terrible; their self-upbraidings and their self-humiliations are very pitiful.

Assuming for the nonce the character of stage-manager, I do not wish to come too often before the curtain to take my poor marionnettes to pieces. I would prefer that you, reader, should learn from their antics and from those simulated speeches which come to them from the wings—and seem to you to come from them—what manner of puppets they are, and what manner of men and women they are meant to stand for. But I wish to come forward with such apologies as may seem needful, to ask your favour on behalf of the puppet Frank. There are some opinions which it is always well to hold about other people, and never wise to hold about ourselves. You sir, shall, if you please, judge me with lenity. When I tumble, you shall be pitiful. When I fail, going back from my promises, revoking my solemn pledges, and breaking down your kindly hopes of me, you shall not be scornful. When I see you trip, I promise not to smile. I pledge myself, when you are at your worst and your stupidest, to think of you gently and hopefully. It is well for a man—it is wise, and good, and gracious in him to be scant in excuse for himself, and plenteous in excuse for others. And I ask you to follow this young fellow's tragic story in this mood. For the fictionist has missed his purpose altogether unless a kindly heart go through his pages with him, and unless the poor shadows he would pass off for men and women meet, at the hands of those for whom they were created, some such kindness of welcome, some such gentle sympathies and hopes, as they would have a right to claim if they were as real as they pretend to be.

There was once upon a time a philosophic king

who knew this world and its ways pretty thoroughly. His philosophy and poetry—for like all true philosophers he was a poet, and like all true poets a philosopher—are buried in a certain well-known old book. His name was Solomon. He is worth study, if only for his knowledge of that vast human family whom he describes as the sons and daughters of folly. That old Hebrew king knew a fool more thoroughly, knew his nature better than any other writer whose works you are likely to chance upon. And in all seriousness, I am disposed to think that Solomon knew the fool so well chiefly from introspection. Each man is in part every other man. The large nature of that old Hebrew potentate had room for much folly in it; but his understanding was able to separate the elements of which he was himself compact. He set himself to know much folly and wisdom. In one of the wise old king's utterances, he says that though you bray a fool in a mortar among bruised wheat with a pestle, yet will not his folly depart from him.

At the very soul of understanding dwells charity. It is an old truth, but none the less worth writing on that account, that knowledge implies sympathy. If I shew you here a man whose hopes are lofty, yet for ever dragged in the mire of failure; whose aims are all born pure, yet always sullied with the smoke of low desires; who with every wish to be generous, is in all things intensely selfish; whose nature perpetually sins against itself; whose life is wrecked by a series of sinful follies, so patently sinful and so openly foolish, that a wayfaring man, though a fool, might escape them easily; and if in spite of all this, I try to shew a man not wholly hopeless or completely lost, I will ask you not to throw me aside too readily as a milk-and-water optimist, but to bring to the understanding of this creature who is, in a sense, the likeness of us all, some memory of your own weakness and your own failure, some sense of the difference which exists between that godlike, possible, ideal *you*, which you do somewhere cherish and hope for and believe in, and the man you know who lives sinfully and foolishly in the place of that ideal.

At three o'clock in the morning, Messrs Hastings, Brookes, and Bonder emerged from Frank's rooms and made night vocal. At ten o'clock Frank awoke to find the daylight pouring in dusty streaks through the Venetian blind, the floor strewn with cigar-ashes and ends of cigars, the table strewn with soiled cards and money and empty bottles, and glasses topsy-turvy, and the lamp in the centre a pale offensive blot against the daylight. Languid and aching, with hot hands and a heavy head, Frank gathered himself together, and began to grope after remembrance. Bit by bit he gathered the fragments of Memory's shattered picture, and pieced them together. Did he lose very heavily? he wondered. What were these? An IOU from Hastings—another from Brookes—another from Bonder. Money too. Much more than he started with, surely? Yes. At least a hundred pounds more. Frank fairly sickened.

And at that moment, pale and penitent, was the youthful Bonder awaiting in the paternal counting-house, and with beating heart, the advent of Bonder senior. To him the honest foolish

youngster made miserable confession, and was, after due severity of admonition, taken back to the fatherly heart and pardoned. Bonder senior could well enough afford to lose the few pounds his son ought to have paid in to the cashier that morning; but the irregularity of the transaction wounded him. For ten minutes or thereabouts the expletives of Bonder senior were sad to listen to, and young Bonder arose, let us hope, impressed for better things in future.

'This especial war-horse,' mused Mr Hastings, as he cooled his head against a marble mantel-piece in his lodgings, 'will no more roll his red eye and rally for the fight. I have digged a pit for my friend, and have fallen myself therein. My bow and my spear are broken, and my arrow is turned aside. I shall have Tasker down on me. Four months from date there will be the Tasker to pay, and nothing to pay him with!'

### DIVING.

Few persons, we should imagine, know much about the hazardous work done either by the aid of that old-fashioned contrivance the diving-bell, or with the more modern diving-dress. Marvellous tales used to be told of the exploits of naked divers for pearls, corals, or sponges in the Indian Archipelago. It has even been said that the most skilful of them in early times could prolong their submarine descent for fifteen or twenty minutes. Such stories must, however, be received with great caution, as no one can safely remain under water more than two minutes without some artificial means for the supply of air.

Science has now come to the help of those who go down into the waters, enabling them not only to reach a greater depth than formerly, but also to remain submerged a much longer time. This has been accomplished chiefly by means of the diving-dress, of which, it is said, upwards of three hundred suits are at present used in the Mediterranean sponge-fisheries. But it is not merely in foreign seas, or when seeking the natural treasures of the ocean, that the improved appliances are employed. Such engineering works as the construction of harbours and of bridges across wide rivers have given the art of diving an importance only developed in recent times. Divers also find their services in frequent demand to overhaul the sluices of lock-gates, repair ship-bottoms, or to recover anchors and wreckage. The increased number of men who devote themselves to this singular and dangerous business was shewn by their numerous offers of help, which came from all quarters, during the efforts to recover the ruins of the lost train and the bodies of its unfortunate passengers, after the recent disaster at Tay Bridge; and the intense anxiety with which these brave endeavours were watched by the public from day to day, warrants our giving a brief account of the mode in which such work is carried on.

Although the diving-dress now used has been

greatly improved in our own time, the idea of affording some such protection to divers is by no means new. As far back as 1664, mention is made in Schott's *Technica Curiosa* of an aquatic armour; and at the beginning of last century another inventor describes a waterproof dress of leather in which the submarine explorer might venture out from the diving-bell and walk about, his head inclosed in a kind of helmet, supplied with air by means of a tube. Many of the later improvements were introduced between the years 1839 and 1843, during the operations at Spithead connected with the removal of the wreck of the *Royal George* ship of war. The modern diving-dress sits loosely upon the body, and is worn over the diver's warmer suit of guernsey. It is made either entirely of india-rubber, covered on both sides with tanned twill, or of waterproof lined with a strong solution of india-rubber. It is in one piece, reaching from the feet to the neck; and the wearer's head is covered with a strong metal helmet, having in front three small round windows of plate-glass, guarded with brass frames. The central bull's-eye screws off; and when the diver reascends to the surface, not a moment is lost in removing it, so that he may at once enjoy again the luxury of breathing freely in the open atmosphere. By this means, on coming up he can rest awhile or give orders without removing the rest of his dress. The cuffs are tied round the wrist, leaving the hands bare and free; india-rubber bands being slipped over the lower end of the cuffs, so as to render the joint water-tight.

But the equipment is not yet complete. One requisite, very useful in emergencies, is a strong knife in a sheath at his side. There still remain the weights or 'sinkers' by which the diver is prevented from rising involuntarily in the water. In order to enable him to remain down as long as may be desired, his sea-boots are furnished with leaden soles, each weighing fourteen pounds. Two additional weights are attached, one to his back and the other to his breast. On coming up to the surface, it is a relief to get off the heavy air-tight helmet, which has been firmly fastened down with shoulder-pads to his breast-plate; but it is a still greater relief to get rid of the body-sinkers, each weighing about thirty pounds.

When the hardy diver is thoroughly equipped for his descent, one end of a strong rope is securely tied round his body under the arms, and to his belt a cord is attached. The first is that by which the assistants above help to pull him up when required. The other is for the purpose of signals; the nature of the message being indicated, according to a simple code, by shaking the cord, or by pulling it a certain number of times. Each diver usually requires three trustworthy assistants. From the spot whence the diver has descended, two of his assistants work the force-pump, by which the prime necessity of air is supplied to him through a flexible tube; whilst the third, besides having to see that this tube is preserved from interference, holds the upper ends of the rope and signal-cord with a firm but sensitive grasp.

Notice one of these divers as, enveloped in his strange attire, he descends a ladder from the boat-side, or lets himself quietly drop into the cruel

waters of the Tay, among the hidden remnants of a dreadful tragedy. Seeing him sink out of sight, an onlooker cannot fail to be impressed with the nerve and powers of endurance required for such a task. In this case, its difficulty is increased not only by the velocity of the current—sometimes exceeding five knots an hour—but also by the nature of the wreck which the brave fellow has gone down to explore. The bed of the river is bestrewn with broken girders and shattered railway carriages, among which there is not only the danger of getting fatally entangled, but also the fear that some sharp edge may chance to cut the tube upon which his life mainly depends. With some anxiety, therefore, on the man's own account, as well as eagerly anticipating his discoveries, spectators await his return.

During this interval of suspense, we can to some extent watch his movements; for a circle of air-bubbles constantly rising to the surface shews, if the water be tolerably smooth, the diver's course as he cautiously gropes his way along. These bubbles are formed by the foul or superfluous air, which escapes at his breast-plate from a patent valve opening outwards, and thus preventing the entrance of water. During high-tide, in calm weather, it is possible to see a distance of several feet at the bed of the channel; but for a week or two after that terrible accident at Tay Bridge, the river was so turbid that nothing could be seen below the surface. It was consequently in perfect darkness that the divers had to work—their dismal search being carried on by carefully feeling any object with which they came into contact whilst 'walking alone in the deep.' And yet, after two or three descents, they somehow become familiar with the ground, and gain confidence from an instinctive acquaintance with the relative position of their surroundings, just as a blind man does in moving about on land. Of the half-dozen divers employed at Dundee, some made as many as six or seven descents daily, varying in duration from five to forty minutes. Considering the weights they carry, the men themselves would be less fatigued and embarrassed with a longer continuous spell of work under water than with ascending and descending so often; but in this instance it was impracticable to remain down long. As it was, some of them on returning looked rather exhausted and faint; but their complexion and features are no sufficient criterion, for most divers, although of strong constitution, are pale. One or two are, however, fresh coloured in feature, as well as of stalwart figure; and none of them own to suffering in health from the peculiar nature of their duties. One essential qualification is that they should be of naturally good health and sober habits.

The depth of the navigable channel of the Tay varies from twenty to forty feet, according to the state of the tide; but whilst the piers were being sunk for the construction of the bridge, some of the divers had to work as far as sixty feet below the surface. At extreme depths, the diver loses all sense of weight, and finds it difficult to keep his footing, owing to the buoyancy of the water. At higher levels less inconvenience is felt, beyond the inevitable discomforts of seeking for wreckage or dead bodies in regions of perpetual cold and darkness. So dry are the divers usually kept by their dress, that one of them, finding it raining

when he rose to the upper world, jocularly remarked that he had apparently come from the bottom of the river to get wet; but an opportunity was soon given him of escaping the shower by a return to the watery depths. Another, less fortunate, gladly ascended to the surface on finding that a leak in his dress was not only soaking him, but that the water was rapidly encroaching upon the reserve stock of air usually stored within the ample folds of his professional costume. Whilst referring again to the diving-dress, it may be of interest to mention that a complete suit, with the needful attachments, seldom costs less than a hundred pounds. The most foppish and extravagant of landmen would be astonished to receive a bill to that amount from some fashionable tailor for a single suit of clothes; but diving equipments find few customers, last many years, and are quite unaffected by changes in fashion.

One of the diver's earliest experiences is a disagreeable 'roaring' sensation in the ears for some time after his first descent; but this is little felt after he becomes accustomed to his work. It is caused by the air-pressure, which increases with depth. From the same cause the diver often experiences a sensation amounting to earache, which any one may test for himself by descending in a diving-bell. With regard to the mode of working, it is noteworthy that, instead of moving gradually outwards after reaching the bottom, the diver usually gropes at once to the full 'length of his tether' in the required direction, and then works slowly back to the starting-point. He considers this the safer method, partly because it leaves him at the finish directly at the place whence he has to rise.

The rate of pay for diving, although often high, is not more than is fairly due to the disagreeable and perilous nature of the work. In the case of recovering wrecked cargoes, the diver sometimes enters into an arrangement for the value of a certain share of the salvage as his remuneration; but the payment of a specific and pre-arranged sum is more common. The amount depends upon the depth of water to be explored, the number of descents, and the nature of the work. In casual engagements, a fee of from three to five guineas is claimed for each descent; but considerably less is paid in regular employment or prolonged operations. Few will think the charges excessive in the case of men who, leaving the world of sunlight and sound, risk their lives amid the night-like gloom, loneliness, and silence of watery depths, made still more weird by the grim presence of Death.

Search for the dead does not, however, form the most frequent part of the diver's work. Sometimes, although seldom, it is relieved with just a little bit of romance, as in the case of a Dundee diver who recently related to the writer that on one occasion he was able to recover near mid-channel an engagement-ring which a young lady lost in sailing ashore from the *Mars* training-ship. It was a gold ring, with three diamonds in the setting. As the fair loser of the precious gift was able to shew where it had dropped, the diver went down to the bottom, and—by good luck, he confessed, as much as good guidance—happened to find it in the mud near one of the Tay Bridge piers.

So essential are diving facilities now considered, that all ships in Her Majesty's navy of sufficient

size to be commanded by a captain are, we believe, supplied with a diving-dress, and carry also a certain number of men who can use it when required by any emergency. All sea-going flag-ships and iron-clads on foreign stations carry two sets of diving apparatus, and are allowed a certain number of trained divers.

The length of time during which a diver can remain under water depends very much upon his own strength and experience, the steady care with which the air-pump is managed, and other circumstances. M. Frendenberg states that, in the repair of the well in the Scharley Zinc Mines in Silesia, two divers descended to a depth of eighty-five feet, remaining down for periods varying from fifteen minutes to two hours. Siebe, another authority on the subject, relates that, in removing the cargo of the ship *Cape Horn*, wrecked off the coast of South America, a diver named Hooper made seven descents to a depth of no less than two hundred and one feet, and at one time remained down forty-two minutes; supposed to be the greatest diving feat ever achieved.

### THE STORY OF A PHOTOGRAPH.

THE following incidents are narrated as they occurred. The story woven out of them is as follows:

Who's that? Well, I hardly know how to answer you. I do not know her name. I only saw her once in my life, then only for a little time, and the chances are I shall never see her again. Strange that a woman, a perfect stranger, should give me her photograph? It does sound strange. How did I get it? Thereon hangs a tale. I will tell you it. It points a moral, is characteristic of a woman, and furnishes me with a pleasant reminiscence of a too fleeting visit to the Scottish Highlands.

It was two years ago—the summer holidays. I had spent them with my wife's brother, George Nettlefold. We had put into execution a long-cherished scheme, and been up to the Highlands. I shall not easily forget that time, nor how the days flew by, nor the sunny weather, nor the wild scenery which presented itself to us in all its glory.

We were working south after a charming walking expedition, and were still in the wilder part of that glorious country, when one morning as usual we packed up our knapsacks, and continued our southern route. We had dinner at a little roadside inn. It was not much of a repast, and to tell the truth, neither particularly well served nor cheap; and having dined, we went off again, intending to make for a certain village—no matter what its name—which we were told was some considerable distance off. It was a broiling afternoon, and by the time we had walked some miles we began to wish we were near our journey's end. We passed one village, and there they told us the other village was a good step farther on, for which information we were not sufficiently grateful. We were half inclined to put up and stay

where we were; but being an obstinate couple, and desirous of seeing some Falls which were in the immediate neighbourhood of our destination, we pressed on. The sun was setting as we reached the top of an ascent it had cost us some pains to climb. Sitting on the bank by the roadside, under the shadow of a mighty tree, we doffed our hats, so that the gentle breeze might cool our heated brows. On a sudden we heard quite close to us loud cries and shouts, as of some one in distress or danger.

'What's that?' said I to George.

'Sounds as though something was the matter with some one,' said he, getting up and looking over the hedge. I rose and joined him.

'Why,' exclaimed George, 'there's a lad drowning in the pool.'

So it seemed. The bank on the other side of the hedge sank in a sharp descent some thirty feet or more. A little to the left was a stream or piece of water of some sort. Generally it was quite narrow—narrower than this room; you might have jumped across it—but in one place it widened out into a tiny lake or pond, tolerably deep apparently; for somewhere about the centre was a little boy trying hard to keep himself afloat, and making a terrible hullabaloo.

Without a word we got over the hedge and ran down the bank. Calling to the youngster to keep still, I ran into the water to help him. It might have been deep enough to drown him, but it barely came up to my shoulders; and when I had once hold of him, it was easy enough to pull him out, and he was little damaged; for when I had got him out he stood bolt upright on the bank, looking at me with large round eyes.

'You're not drowned?' I said, smiling at his solemn expression.

He shook his head gravely, without a word. He was a queer-looking child, quite a little one, scarcely more than ten years old. So far, I had kept my hand upon his collar, thinking he might fall down, or faint, or something; but relieved of any such fears, I took it away. No sooner did I do so than, without a sign of any such intention, he was off like a dart, up the bank, through the hedge, and out of sight.

'Well,' said George, laughing, 'there's gratitude for you.'

'Yes,' said I, a little nettled; 'he might have said thank you.'

'Or told us how much farther we have to go,' growled George.

'I've got a ducking for my pains,' I continued, thinking somewhat ruefully of my knickerbocker suit—a recent purchase.

'That won't matter,' quoth George unsympathetically; 'you'll soon get dry.'

We climbed up the bank, and continued our journey, talking and laughing over our wayside adventure. Somehow or other, I do not know how, we lost our way; how far we went, or where we got to, I do not rightly know to this day. Matters were beginning to look serious—the evening was closing in; we were in a wild country, hardly a house in sight; no village, or sign of one; we were fairly tired, and I began to consider what had best be done. We were in rather an uncomfortable frame of mind when, turning a corner,

we saw right in front of us, rising from a belt of trees, a column of smoke. The sight was like an oasis in the desert. We hurried to it, and found, to our exceeding satisfaction, it was a charming country inn, shrined in a glorious sweet-smelling frame of honeysuckle and red roses. We entered together. The very sight of the bar was enough to do one good. The shining glass and tankards, the array of bottles tastefully arranged, the general air of neatness and comfort which pervaded everything, filled our wearied souls in anticipation with the sweets of rest. Behind the counter sat a female, looking quite a lady, about thirty-five or so, in widow's cap and weeds. She rose at our entrance.

'We want two beds,' I said, coming to the point at once.

'We can offer you none,' she replied civilly, but anything but warmly; 'we are already overcrowded.'

'No bed!' I said, staggering back; while George's face fell an inch at least. 'But a sofa or—'

'I am sorry,' interrupted she, speaking as I never heard innkeeper, whether masculine or feminine, speak before; 'but we have no accommodation of any sort to give you.'

'Then where shall we find another inn?'

'The next inn is about—' she paused—'eight or nine miles farther on.' She might as well have said eight or nine hundred.

Out we staggered from that delicious bar into the gathering night. There was a man, a labourer of some sort, standing in the bar; and as we went out, I noticed him lean over and whisper to the hostess. It was as though we had been lifted to celestial heights to be plunged into unknown darkness. What we were to do we had not the faintest notion. To walk eight or nine miles over such a country in our then state, was a physical impossibility. It was all we could do to keep ourselves from sinking on the road. As we went, wearily dragging our legs along, some one came running after us. It was a girl, apparently a servant-girl, young, pretty, and neatly dressed. She seemed in a great flurry.

'Please sir,' she said, stopping us, 'I've brought a message.'

I looked at her. 'A message? From whom?'

'From the inn, sir. Mistress says you're to come back at once.'

'Come back at once!' I repeated it after her, astonished. These were odd proceedings.

'She says, sir, she will try to make you comfortable. And she wished me to say she is very sorry, but she did not know you.'

Know me! Of course not. How was she to, seeing she had never seen me before, nor I her? The ignorance was mutual.

'Let's go,' said George, cutting further conversation short.

I remember as we followed that pretty maiden through the dim gloaming of what promised to be an unusually dark night, of half-wondering whether she were having a little game with us. But she was not, and in thinking so I wronged her.

When we reached the inn, the hostess bowed. 'I am sorry, sir,' she said, in a stately way, 'to have sent you away, but I did not know you.'

Did not know me? What did she mean by

she did not know me? Of course she did not know me. How was she to? But I had no time for reflection. The servant shewed us into an inner room, the neatest, cosiest, prettiest little room I do believe I ever saw. George threw himself on the sofa; while I sat on a chair, my feet apart, my hands on my knees, staring into vacancy, feeling a little mystified.

In a few minutes the servant returned. 'Please, will you step this way, sir?' said she to me.

George was asleep on the sofa, and did not notice her entrance.

I followed her up-stairs; we were evidently among the bedrooms. She stopped at a door, and opening it, shewed me in. It was a sleeping apartment, quite small, but so neat and clean and pretty, so unlike the usual thing you expect in hotels and inns, that I looked at the servant in amaze. There were a suit of clothes laid out upon the bed, black, and seeming quite new; and a clean white shirt hanging on a chair; a collar, necktie, and socks on the seat; and a pair of slippers on the floor.

'Mistress,' said my guide, with just enough of the Doric to be agreeable, 'wishes you to change your clothes, or else you will get cold.' This was a fresh surprise. She was really a considerate landlady. Landladies are not in the habit—or landlords either, unfortunately—of offering and providing entire changes of clothing to wet and wearied travellers.

'What,' I inquired, 'is your mistress's name?'

'Mrs Mac'—something in three syllables, but what I could not catch. She then withdrew.

Taking off my drenched knickerbocker suit, I first had a thorough good wash, and then put on the clothes provided. The shirt was perfumed with lavender; and the clothes, if not made by a west-end tailor, were at least respectable, and fitted me surprisingly well, considering. When I was dressed, I am inclined to think I looked like an undertaker's man got up for a funeral. I went down-stairs again, and found my Phillis waiting at the foot to guide me into the parlour, where I found George still sleeping. Without remorse, I woke him up.

'George,' I exclaimed, 'this is a queer set-out.'

'What's a queer set-out?' muttered he, yawning prodigiously.

'This,' I said, 'Look at me.'

He rubbed his eyes and stared. 'Whose undertaker's establishment have you been robbing?' he queried. 'Wherever did you get those things from?'

I told him. 'Well,' said he, 'she's a pleasant sort of landlady. She seems to have taken a fancy to you.'

'Don't talk nonsense,' I retorted, thinking of Kate and my family of seven.

'I hope,' said he, 'among her other kindnesses, she won't forget to let us have some supper.'

The words were hardly out of his mouth when there was a tap at the door, and in came Phillis. 'Please sir,' said that admirable young person, 'mistress says may I lay the table for supper?'

'Give your mistress my compliments,' replied George with assumed dignity—'Mr Nettlefold's compliments, and say with the greatest pleasure.'

She did not give her mistress his compliments, at least not then; but without a word or a smile

laid it there and then, covering it with a snow-white tablecloth, and laying it with that charming air of home-like comfort which pervaded everything.

How they managed to prepare such a supper in such a short space of time, is more than I can say. There were some delicious trout, cooked to perfection, ham and eggs done to a turn, followed by pancakes done to a toss. We had good appetites, and did wonderful justice to the fare. When we had finished, we rang the bell, and in came Phillis, who, having learned our wishes, shewed us to our room. George and I shared one bed, amply large enough for both.

In the morning we overslept ourselves; no wonder, in such quarters and tired out as we had been; but when we got down, there was the breakfast waiting our arrival! It was as good as the supper; more trout, omelets, fresh eggs, butter which melted in your mouth, and fresh home-made scones. After breakfast we began seriously to consider the cost of our entertainment. Hitherto, we had been economical, and had indulged in nothing so luxurious since we had been in those northern regions. We rang the bell, and in came the landlady. We rose as she entered and bowed, which courtesy she gracefully returned.

'We shall be much obliged,' I said, 'if you will let us have our bill.'

'Bill!' she said, drawing herself upright. 'Do you wish to insult me, sir?'

Insult her! 'Insult you!' I said, visions of *She Stoops to Conquer*, and the mistake Young Marlow made, flitting across my mind. 'But surely this is an inn?' Half fearing we had made a mistake like Marlow's.

'Yes,' returned she, with something like wounded dignity; 'this is an inn, but not to you whatever.'

'Not to us!' I exclaimed, amazed; while George, I fancy, began to take her for a lunatic.

'Do you think,' she burst out, 'I would take money from the man who saved my child?'

Saved her child! In an instant it flashed across me, the youngster floundering in the pool, and how the young rogue had run away.

'Was—was that your son in the pool?' I asked, beginning to understand her.

'Ay, it was Alec,' she said; 'my only son mirofer.'

'But,' I asked, 'how did you know it was I who?'

'Donald Macneil'—or some such name—'told me. He was near by, and saw it all.'

I remembered the labouring man in the bar, and how he had whispered to her when we went out; he, I presumed, was Donald Macneil.

Well, she would not take a farthing, and we could hardly press her. She, such a strange sort of woman, cold and proud as a Roman mother; no wonder her son was such a queer young fish. It appeared she had not only turned out of her own sitting-room, but out of her own bedroom too, to make room for us. Where she slept, I have no idea. In the bar possibly, which by-the-by would not have been so bad after all.

Before we went, we asked her for her photograph, which she gave us; and there it is. It is not a bad likeness; but it hardly does her justice; it does not give you the proud set of her features; and in a photograph you cannot get the full expression of her eyes.

'Is that all?'

'That's all.'

'Where's the moral?'

'The moral is, never neglect to do a good action when you can; you never know how soon you may be repaid.'

'And the characteristic of a woman?'

'It seems to me, sir, the whole thing was characteristic of a woman—especially a Highland one.'

## AN OLD KENTISH TOWN.

WANDERING along the east coast of the county of Kent, the tourist who has time to spare, and who is impervious to the noisy attractions of the many watering-places dotted along it, will find a quaint little old-world town standing in a marshy plain a little back from the sea, which will well repay the artist or the lover of antiquity who lingers there for a day or two. The name of the place is Sandwich. If he has ever been in Holland, he will think he has suddenly been transported there, as he sees the flat landscape unrolling itself before him, with only here and there a few cattle grazing; and occasionally a low red-tiled roof touched by the sun, making a bit of warm colour in the midst of the universal grayness. Treeless—save for a few melancholy poplars—and dreary enough it looks, even in the mellow light of a clear autumnal day, as you speed along in the train, a mode of locomotion which seems strangely out of keeping with the scene. A flat-bottomed punt moving lazily along a canal would be the means of progression to be expected in this dim and colourless scenery. Presently you alight at the little station, where the momentary stir and bustle brings you back to the times you live in. But as you shoulder your knapsack, and wander away through the silent and deserted streets in search of a hostelry, you feel as the Professor may have felt in Hans Andersen's story, when he drew on the goloshes of Happiness, and found himself suddenly in the Copenhagen of the middle ages.

The spirit of the place—supposing you to be at all imaginative—will already begin to influence you, and you will probably turn from the more modern inn—though that is quiet enough—and hesitate whether you will locate yourself at the *Fleurs de Lis* or the *Mermaid* or the *King's Arms*, which attract you by their overhanging stories and gables, and the carvings of grotesque wooden figures which support them. Your choice made, you will probably be rewarded by eating your supper in a room where the mantel-piece is composed of Dutch tiles, real Dutch tiles, brought over by real Dutchmen in the reign of Elizabeth, and where the oak-carvings of the ceiling would almost do credit to Gibbons. Your tea, should you indulge in that modest beverage, will be served to you in a pot of real delf; and should you partake of a glass of toddy before you turn in for the night, you may perchance have the spirits brought to you in a square bottle which bears the date 1741, and the name of the then Mayor of Sandwich.

When you stroll forth in the morning, your sketch-book under your arm, in search of some quaint or dainty 'bit' with which to enrich your

canvas, you find that your only difficulty will be in making a good selection from the many pictures you see around you. Here a De Hoogh, there a Van der Heyden, seem to have left their frames and taken up their abode in these silent and grass-grown streets. For silent they are, even in these early morning hours, when the stillness in other towns is broken by the whistle of the labourer on his way to work, by the lowing of cattle, by the factory bell, or the distant hum of machinery. Here no such sounds break the stillness. We presume that, as there are houses, there must be inhabitants; but we come across them only here and there as we take our morning walk, unless we look back over our shoulder, when we see heads appearing at door and window, watching the 'stranger' with curious eyes.

'What is there to be seen in the town?' we ask our landlady, as we prepare to sally forth sketch-book in hand.

'Well, not much, sir,' is the unsatisfactory answer; 'there is the house in which Queen Elizabeth slept' [ubiquitous monarch, who seems to have slept in every town in her kingdom]; 'and St Clement's and St Peter's Churches; and—and—I am afraid that is all.'

Somewhat discouraged, my companion and I start on a voyage of discovery to look for Queen Elizabeth's house. We have not far to go; it is but just round the corner; and procuring the key from a highly loquacious dame, who is much incensed at our rejection of her proffered company and explanations, we unlock the door and enter. Nothing to see! Why, it is worth a journey from town only to spend an hour in the room in which we now find ourselves. A delightful room—all oak carving, dark with age—low and large—grotesque heads looking down on us from the ceiling, from the midst of wreaths of flowers and fruits; panels—sliding panels, perhaps—all round us. An oaken chimney-piece with a hunting scene inlaid in different coloured woods, which stand out well, even now, from the nearly black oak; and brass dogs on the empty hearth. We almost expect to see one of the panels disappear, and some proscribed Jacobite come forth from his place of concealment.

'What business have we denizens of the modern world here?' we ask ourselves as we ascend the stair, treading softly and speaking low, for fear of disturbing the ghosts who surely have their abiding-place in the dim passages. Oak-panelled it certainly is also, though the hand of some goth has painted it a dirty white. My companion scrapes a bit of the paint off with her knife, and, as we see the brown wood underneath, we give a sympathetic groan over the vandalism. But the desecrated stair leads us into the room in which Queen Elizabeth slept on the night of the 31st August 1572, and which, fortunately, sacrilegious hands have spared. It is almost the counterpart of the room below it, except that the very handsome and elaborately carved ceiling is of plaster, and the chimney and mantel-piece carved and not inlaid. From the window we look on to the river Stour and over the flat and dreary landscape, to where the Ramsgate cliffs are shining brilliantly in the morning sun. We learn from *Boys' History of Sandwich* that it was in Mr Manwood's house that Her Majesty lay, 'a house wherein King Henry VIII. had been lodged twice

before.' The good burgesses of the town seem, according to the same authority, to have provided many amusements for the Queen, and in their loyalty she evidently had great faith; for it is specially recorded that, at a banquet prepared for her in the school-house—consisting of one hundred and sixty dishes, served on a table twenty-eight feet long—'she was very merrye, and did eat of divers dishes without any assaye.' And she also accepted a silver-gilt cup well-nigh a cubit high.

Nothing to see! Why, let us stroll along Strand Street, bearing a little to our left, until we come to this same old school-house, which was founded by subscription, under a promise from Mr Manwood, afterwards Sir Roger—probably the same in whose house the Queen slept—to endow it with lands of sufficient value to support the building and maintain a master. At one time no doubt, it was a very flourishing institution; but like everything else around us, it partakes now of the silence and deadness of the town. Perhaps it is holiday-time, perhaps the children are away; but at all events the building is here quaint and tall, with red-tiled roof and queer high chimneys, which look as if they might be dangerous neighbours in a gale; and odd out-buildings, and many-pointed gables, and the date, 1564, in relief on the front facing the roadway. We are told that it stood near Canterbury Gate; but though the Canterbury Road is here, the Gate is a thing of the past.

While I am peering over the low wall into the grass-grown court-yard, and moralising over the decay of all human institutions, my companion is transferring the old house to her sketch-book; and when she has finished, I suggest that we should try and have a peep at the churches which our landlady has mentioned as being of the lions of the place. We go first to St Clement's, the square tower of which is one of the most ancient Saxon buildings in England. It is ornamented on each side with three tiers of pillars and circular arches. Boys says that it had formerly a spire and battlements, which were taken down between the years 1670 and 1673. The church is built principally of boulders, mixed with sandstone from Pegwell Bay, with the exception of the tower, which is composed of Normandy stone. The ceiling of the nave is of oak, in panels, like those in Queen Elizabeth's house, with ornaments of flowers and foliage, and angels holding shields. The stalls in the chancel are also oak, of very ancient date, and much worm-eaten. In the pavement are many grave-stones, originally ornamented, as we can see, with figures and devices in brass, which have been removed; and here and there a few ancient tiles still remain.

The day is so clear that my companion suggests that we should ascend the tower and see the view; which we accordingly do, and are well repaid for our climb. It stands in the centre of an almost level plain; and we cannot help thinking how often, in ancient days, the men of Sandwich must have ascended that tower to watch the approach of an enemy. For the old town has been attacked and taken many times, since the Danes, landing in Kent, first pillaged it, according to an ancient Saxon Chronicle, in the year 851. Sandwich is not the least important of the Cinque Ports, and many a fleet has sailed from it against the

French, and many a prize towed into its haven. The town, lying at our feet, looks peaceful enough now in the morning sunshine, with the blue wreaths of smoke hovering lazily in the still air over the picturesque tiled roofs, which vary in colour from yellow, through every shade and tone of red, to the richest brown in the shadows. And the fleet of merchant-vessels lying windbound in the Downs, speaks to wealth and commerce and progress, instead of deadly war and tumult. Wonderfully 'holländisch' the scene looks from this elevation. The poplars, the windmills, the universal flatness—except where, on the horizon, the Reculvers just catch the sun. The whole scene must have reminded the Flemings who settled here in the reign of Elizabeth, of the home and country lost to them.

When we reluctantly descend, the verger, who seems pleased at the interest we manifest, takes us into the vestry and shews us a very ancient register of births, deaths, and marriages, written on parchment, and strongly bound. Among the deaths, I find the following droll entries: In 1622—'Old Mother Chilton;' and a little lower on the same page, 'Old Widow Woollet.' In 1643—'Richard Baker, a very poore man;' and—this strikes us as unkind—'Sybil Muzred, a very ancient maide.' In the same year it is recorded that 'Mr Peeke was very solemnly buried.' We wonder if the solemn ceremonies concluded with a great jollification, and whether all the mourners at the funeral went sober to bed! On the font, as we come out, we find the Cinque Ports arms, and the lions of England quartered with the French fleur de lis.

From St Clement's we wend our way through the quiet streets, past what used to be the fish-market, with its old-fashioned gabled houses, each story overhanging the other, until the topmost one looks as if it would fall into the street below, until we come to St Peter's. Here we are fortunate enough to meet with a most courteous gentleman, who, evidently glad of an intelligent human being to speak to, accompanies us into the church, and shews us some curious old Dutch monuments. From him we learn that in olden times the principal support of the vicar arose from the tithes of fish brought into the haven. It is to be hoped that he does not now depend upon that, or I am afraid his stipend would be but scanty. In the time of the Romans, no doubt Sandwich was washed by the sea, which has now receded fully a mile; leaving between it and the town the low-lying mist-wreathed land, partly marsh, partly sand, of which I have spoken. The name is evidently the Saxon Sandwic, or town on the sand.

It is now high noon; and 'surely,' we say to each other, 'we shall see some sign of life about the place.' But no, it looks as silent and deserted as it did at six in the morning; and it is difficult to realise that in the days of King Canute it was one of the most important of the English ports. We wander into a queer little shop, full of curious old bric-à-brac, and pick up, for a mere song, some rare old Dutch tiles, relics of the Flemish settlers; and one or two old Mandarin China plates, which remind us of the one of which Charles Lamb speaks, on which the little gentleman is handing a cup of tea to a lady two miles off; and, joy of joys, a quaint old bottle, dated 1741, like the one

we saw at the inn last night. If only we could carry them away, we would invest in a bewitching set of brass-mounted 'tall-boys,' and—for here it is—the identical 'old clock on the stairs' of which Longfellow has sung so sweetly. The shopkeeper—though that is far too modern a word by which to describe him—and his wife are chatty people, and evidently proud of the antiquity of their house, built, they tell us, early in the seventeenth century; and they shew us a curious bit of old wall, which seems to corroborate their story.

I ask them what they do in the winter.

'Much the same as in the summer,' is the answer; 'it is equally dull all the year round.'

'Surely,' I say to my companion as we leave the little shop and continue our walk, 'any modern Rip Van Winkle might slumber here for twenty years, and on awaking only read the lapse of time in the silvered hair and wrinkled cheeks of his contemporaries.'

We take our way through Delf Street, Potter and Knight-riding Streets, Butchery, Salutation—what queer old names—to the Fisher Gate, the only one remaining of the Gates which gave egress from the town. It abuts on the river, and doubtless the fishermen landed there with their spoils from the sea. It has a pointed arch, and is in a tolerable state of preservation. Close to it stood the Pillory Gate, and as we look up we see the word 'Pillory' written at a street corner, though there is now only a timber-yard where the Gate used to stand. Let us hope that the pillory itself was done away with, as being of no further use to the virtuous inhabitants.

Going a little farther, we come to the Barbican; but although it bears the ancient name, nothing of the original structure is left. If we go through it, and crossing the Stour, walk a short way along the Ramsgate Road, we shall come to a curious pebble ridge or bit of sea-beach quite inland; but we have not time to-day, and indeed are loath to leave the old walls which still surround the town. So we take a circuitous route back to our inn, coming across many a dainty bit of old carving, many a curious gabled house with low-arched doorway and diamond-latticed windows. One doorway of oak, which appears to have recently been picked out, bears the Cinque Ports Arms and the date 1601; and we pass a square archway, if we may so speak, with a carved wooden beam running along it, through which we get a peep at a delicious mass of quaint chimneys and richly coloured roofs and picturesque gables, among which the warm shadows lie dreaming, which, framed by the ancient arch, make a picture worthy the brush of a Teniers.

At length, tired out, we find ourselves again at our comfortable inn; and waited on by our landlady in person, we dawdle over our supper, talking over what we have seen, and looking at one or two sketches we have made. Our hostess is in the midst of an interesting account of some subterranean passages which were wont to be used by the smugglers, when the sound of a bell comes borne to us through the stillness.

'What is that?' we ask, startled.

'That,' replies the landlady—'that is the curfew.'

That old-world sound seems still to ring in our ears when we close our eyes in sleep, which we do only to dream that we are in the oak-panelled

room of Mr Manwood's house, and that we are being presented to Her Gracious Majesty Queen Elizabeth by her Master of the Horse, the Earl of Leicester.

### TALES OF THE TELEGRAPH.

RIDDLE-READING, so popular as a recreation with young ladies just now, is literally part and parcel of a newspaper editor's daily work ; but in his case the puzzles to be solved must be solved immediately they are proposed ; there is no setting them aside for leisure consideration.

Correspondents of the press when they use the telegraph are in the habit, for economical reasons, of dispensing with articles, prepositions, and conjunctions ; while punctuation is perforce out of the question. Their communications, consequently, are not always to be read aright at sight ; and should the telegraph clerk, from haste or ignorance or malice, complicate matters by mistakes of commission or omission, the result is likely to be more exciting than pleasing to the editor, or his sub, who has—at the shortest notice—to make sense out of nonsense, knowing if he should happen to blunder, somebody will certainly let the public know it.

When Mr Reuter, desiring to make the editor of the *Java Bode* acquainted with the fact that Mr Brand had been nominated for the vacant Speakership, put the thing thus, 'Proposed to Brand Speaker,' it is hardly surprising that the journalist, in setting the latest news from England before his readers, gravely stated that it was proposed to brand the Speaker of the House of Commons ; wisely leaving them to divine the object of the operation. The editor of the *Swiss Times* grumbled at his London correspondent's telegram, 'Duke Guise's death caused great gloom thrown Twickenham but sweaking moved censure Judge Keogh ;' but pretty well used to dislocated English, he soon resolved it into, 'The Duke of Guise's death caused great gloom through Twickenham. Butt speaking—moved censure upon Judge Keogh.'

Our own *Times* once printed a despatch precisely as it was received. It ran thus : 'Washington. House passed resolution directing committee inquiry into offences president hundred eight ayes thirty eight noes first sept impeachment radicals determined press it president vetoed negro suffrage bill.' The proper reading of which was supposed to be : 'The House has passed a resolution directing a committee to inquire into offences committed by the President, by a hundred and eight Ayes to thirty-eight Noes. This is the first step to an impeachment. The Radicals are determined to press it. The President has vetoed the Negro Suffrage Bill.'

What the *Times* did just to shew how telegraphic news must be adjusted to make it intelligible, was done by another journal out of sheer disgust with a message which defied the united ingenuity of the staff, and in the expressed hope that somebody might hit upon its meaning. It ran thus : 'With rising north decrees late Government for sequester proforty bading baderg will be mitigated actnated cabinet serious grounds for supposing endearaourg abroad and among baderg if rising successful some disagreements among ministers

will be pacified until King returns from north this completes former message.'

When the news came of the revolution in Turkey and the deposition of Abdul Aziz, Queen Victoria, it is said, lost no time in intervening in his behalf, by telegraphing to Constantinople and expressing her hope that the ex-Sultan would not be subjected to any violence or ill-treatment. 'Soignez le bien'—Take good care of him—said Her Majesty ; but the cruel telegraph made her say, 'Saignez le bien'—Bleed him well ; and how they bled him all the world knows. The story is not impossible.—In his last annual Report, the Postmaster-general owns that a poor woman, telegraphing to a relative, 'Mary is bad,' had her message rendered, 'Mary is dead ;' and that a pleasure-party wishing to advise their friends at home of their safety by the assurance that they had 'Arrived all right,' scandalised the anxious ones with the announcement, 'We have arrived all tight.'—But many jokes are perpetrated by the wire without receiving official recognition. A lady living near London, whose lord and master went up to town every day, was not a little puzzled by a message from him telling her he 'would bring Sal on for dinner ;' nor was she quite easy in her mind until ocularly convinced that his only companion was a fine salmon.—A gentleman telegraphing to a bookseller at Cambridge to forward him a copy of a book of prize poems containing Johnson's Poem on Plato, was surprised at receiving by the first post a letter from the bookseller, saying he could not find any such work ; but his surprise did not outlast the discovery that by the time his message reached Cambridge the title he had given had become transformed into, 'John P'omens on Plate Money.'

Not so easily daunted by an unexpected demand was an agent at San Francisco, to whom the proprietor of an anaconda on exhibition in Sacramento wired, 'Send two hundred cats immediately.' He was a little taken aback ; but presuming the anaconda was hungry, that rabbits were scarce at Sacramento, and the cats were wanted as substitutes, he sent an army of boys abroad to catch all the stray cats ; and by the afternoon had got seventy-five packed in a crate, which he sent off with a letter promising to forward the remainder next day, although he was afraid if the cats got loose they would eat the anaconda, instead of letting him eat them. Luckily for the feline population of San Francisco, their kidnapper's preparations for a night foray were suspended by the timely coming of another message from the snake-owner telling the agent not to send any more cats, but two hundred 'cuts' wherewith to bill the town.

A young German lieutenant, wounded in the Franco-German war, went for his health's sake to a quiet village in Vaud, where he found a sweetheart. By the time he had regained his health the pair were engaged ; then came a sudden order to report himself at Berlin, an order he of course obeyed. At first his disconsolate Marie was comforted by frequent letters full of protestations of love and constancy ; but as time wore on the lieutenant plied his pen less often and moderated its outpourings. At last he suffered six weeks to go by without a word. He was expecting a reproachful reminder, when a telegram arrived from the faithful girl, which may

be thus translated: 'DEAR FRITZ—I have just received a letter informing me that my uncle, a millionaire in the East Indies, is dead, and that I am his sole heiress.' Fritz felt his love revive as he read. He applied for leave of absence, and was soon exchanging greetings with the Swiss maiden. Though the coming of her lover filled her heart with joy, she could not refrain from gently upbraiding him for his silence.

'Don't let us speak of it, dearest,' replied he. 'There is no longer any obstacle to our union. The unexpected good fortune which Providence has sent us has removed the objections of my parents; a fortune so colossal'—

'Fritz!' interrupted Marie, 'do not make fun of me.'

For answer the lieutenant drew her telegram out of his pocket and shewed her the words: 'My uncle, a millionaire in the East Indies, is dead.'

The poor girl, dropping his hand, said: 'Dear Fritz, I wrote, "My uncle, a *missionnaire*." He has left me all he had, which is just a hundred and ninety-six francs.'

Fritz went back to Berlin, freed from his engagement.

A somewhat suspicious feat of transmutation was accomplished by an American operator for the benefit of a trader, who fortunate enough to overtake an absconding clerk and obtain full restitution from the seemingly repentant thief, telegraphed to his wife: 'Found Calusha, hope better things.' She, reading, 'Found gal shall elope and get her things,' took the next train to the scene of action.—A wiser course than that adopted by the wife of a Boston clergyman, who arrived home just in time to stay her as she was 'going back to her mother,' after reading a telegram to her husband running, 'The little darlings are doing well and looking lovely; send money for their board;' and it took all that clergyman's eloquence to convince her that the little darlings were a couple of rarely bred pups he had bought in New York, and left in charge of a dog-fancier.

The laugh, however, is not always against the ladies. A noble lord, as proud and fond as a man should be of his beautiful young wife, was just about rising to speak in a debate, when a telegram was put into his hands. He read it, left the House, jumped into a cab, drove to Charing Cross, and took the train to Dover. Next day he returned home, rushed into his wife's room, and finding her there, upbraided the astonished lady in no measured terms. She protested her ignorance of having done anything to offend him.

'Then what did you mean by your telegram?' he asked.

'Mean? What I said of course. What are you talking about?'

'Read it for yourself,' said he.

She read: 'I flee with Mr — to Dover straight. Pray for me.'

For the moment words would not come; then after a merry fit of laughter, the suspected wife, quietly remarked: 'O those dreadful telegraph people! No wonder you are out of your mind, dear. I telegraphed simply: "I tea with Mrs — in Dover Street. Stay for me."'

King John of Saxony was prone to dropping in upon officials when they least expected him. One day he appeared at the telegraph office of a small station. The clerk apprised his colleague at the

next station of the unwelcome visit, and before an acknowledgment of the warning came, was called upon to enlighten the inquiring monarch respecting the business of his office. Presently a message came along the wires, and His Majesty desired to be acquainted with its purport. He was told it was unimportant; but was not to be put off, and insisted upon the message being repeated to him; so the stammering clerk had no choice but to regale the royal ears with the German equivalent for: 'The king pokes his nose into everything.' If King John was annoyed by the impertinence, he had to thank himself for it. Such was hardly the case with the late Earl Russell. One evening, when he was the minister in attendance at Balmoral, a little old man, buried in a greatcoat, handed a telegram, addressed to one of the ministers in London, to the telegraph clerk at one of the stations on the Dee-side railway. The clerk, after glancing at the message, threw it contemptuously back with, 'Put your name to it. It's a pity your master does not know how to send a telegram.' The name was added. 'Why, you can't write!' exclaimed the clerk, after vainly trying to make something of the signature. 'What's your name?'

'My name,' said the messenger—'my name is John Russell.'

That clerk was transferred to another office before many days passed.

Writing of the difficulty English engineers experienced in making educated Persians understand the working of the electric telegraph, Mr Mounsey says: 'Much of the time of one of our officers was occupied during several weeks in attempting to enlighten the mind of a provincial governor, who had got it into his head that the wires were hollow tubes, and that messages were transmitted through them, as in the pneumatic post. In vain was the whole apparatus shewn to His Highness; in vain even all its parts explained and re-explained—he stuck to his idea; and it was only by the suggestion of the following simile that he was at last induced to relinquish it, and declare himself satisfied. 'Imagine,' said the officer, 'a dog whose tail is here at Teheran, and his muzzle in London; tread on his tail here, and he will bark there.'

We fear it is not necessary to go so far as Persia to find folk whose notions of how the thing is done are as wide of the mark as that of the hard-to-be-convinced governor. When a brave *voltigeur* of the Imperial Guard wrote from the Crimea to his father in Alsace, asking him to send him a pair of strong shoes and a five franc piece; the father, bethinking himself of the telegraph's speed, put the money into one of the shoes, and hung the shoes upon the wires. An ill-shod fellow coming by soon afterwards, made an exchange; and the old man upon discovering the substitution, went home to tell his wife their boy had not only received his new pair of shoes, but had returned the old ones!—An old lady told an English station-master she knew all about the composition of electricity, and quite understood the secret of sending the messages; there was only one little point that puzzled her, and that was, how the messages got past the poles.

A droll mistake was made by an imaginative old dame who, having permitted a telegraph pole to be placed on the top of her house, waited upon the chief of the Telegraphic Com-

pany concerned to complain that she could get no sleep of a night, being kept awake by the noise made by the messages passing over her head. 'I don't think, sir,' said she, 'you can be aware of all that's said along them wires. There's a deal that hadn't ought to be. I can assure you, sir, that very much that's said there, that I have to lie and listen to, is such as no decent woman ought to hear; and I hope you will put a stop to it.' The amused gentleman was hardly able to meet the accusation with due gravity; but he did contrive to keep his countenance while he informed the old lady that the young men who had hitherto worked the wires were under notice of dismissal; and that in future only young women of great respectability would be employed, so there would be no danger of her propriety being shocked any longer.

### RECENT IMPROVEMENTS IN PHOTOGRAPHY.

THE perfection of light-portraiture seems to have been reached by the latest improvements in the manufacture of dry plates. The contrast betwixt the methods of modern and early photography is very great. In the matter of rapidity alone, the advances lately made are very surprising. In those dark ages when the art was in its infancy, the average exposure for a plate was from three to five minutes—a severe trial indeed for the most patient sitter. But the excellence lately attained both in lenses and plates has reversed this order of things, and made the difficulty now become a want of speed in the operator.

For a long time attention was directed mainly to the improvement of the lens of the camera, as the only method of reaching the minimum of exposure; but as there is a very marked limit to which the perfecting of the lens can go without becoming impossibly expensive, recent experiments have been made upon the preparing of the plate instead, as a means of accomplishing this object. It may be instructive to notice the result of this change of procedure.

The collodionised plate was rendered sensitive by immersion in a bath of nitrate of silver, which transformed the salts contained in the collodion film into a compound highly susceptible to impressions from the solar ray. The power of the lens to transmit light to the surface of the plate, was the measure of the speed of the operation. But there were many difficulties under which the photographer laboured. The introduction of a foreign substance into the silver-bath might neutralise his efforts entirely, and render it both an expensive and tedious process to rectify the disorder. Hence photographers latterly abandoned their endeavours to produce elaborately perfect lenses; and directing their attention to the overcoming of the difficulty in the plate, have succeeded remarkably. Though the dry plate has been in use for a considerable time, it has only lately reached such a stage of perfection as to eclipse its older-fashioned original. Plates are now prepared which are 'ready for use' at once, and will remain sensitive for any length of time if the light be excluded from them. An emulsion of bromide of silver and gelatine is poured upon the glass plate, and when thoroughly

dried, it may be laid away for months and still retain its sensitiveness to light. This fact renders it easy to have wholesale manufactories for sensitive plates; and at once conquers the necessity of the photographer using the silver-bath, save on rare occasions.

Not only is the plate thus rendered portable, but its sensitiveness is very much increased. The mere opening and shutting of the cap of the lens is now sufficient exposure in an average light. Indeed the speed of photographing with a good lens and dry plate is now almost incredible. A photograph was lately taken wherein, by an ingenious arrangement of threads which opened and shut the lens-cap, fourteen different views were taken of a man *whilst in the act of leaping*. Thus, for all ordinary purposes photography may be said to have reached its climax.

### SPRING.

SUNSHINE streaming gaily,  
Skies of deeper blue,  
Crimson-budded woodlands,  
Fields of greener hue,  
Tell the winter-weary  
Spring returns anew.

All is now forgotten,  
As the wild-birds sing,  
Of the biting north blast—  
Winter's numbing sting—  
And of weary longing  
For the jocund Spring:

For the vernal sweetness  
Screens the darksome past;  
Light falls where the shadows  
Erst were grim and fast:  
In the life's present  
All is joy at last.

Shouts and youthful laughter  
Rise from out the dells  
Where the runlets babble,  
Where the primrose dwells,  
Where the cups and daisies  
Leave their winter cells.

Over hill and valley,  
Through the meadows gay,  
By the brimming rivers  
Countless roamers stray,  
Glad and sunny-hearted  
As the sun-bright day.

Age and youth a-level,  
Sage and wayward boy,  
Feel the sweet heart-throbbing,  
All the life and joy  
Of bright April's bringing—  
Gifts that never cloy.

Sunlight streaming gaily,  
Rain in sunny showers,  
Balmy west winds blowing,  
Groups of infant flowers,  
Hearts with pleasure beating  
Fill the merry hours.

## A LADY'S TRIP IN THE ROCKY MOUNTAINS.

MISS BIRD is one of the most courageous and enduring lady-travellers ever heard of. She does not, as in the case of Mrs Brassey, make luxurious voyages in her own yacht; nor, as in the manner of lady-tourists generally, trust to public conveyances. As an accomplished equestrian, she prefers to journey chiefly on horseback. Dressed in a kind of Bloomer costume—a wide-awake hat, a close-fitting, gray cloth jacket, short petticoats and trousers of the same material, with frill at the ankle, and a stout pair of boots, she is ready to mount and be off for hundreds of miles. Taking with her only a small bag, she is not encumbered with luggage. Able to be her own groom, she needs no assistance, and rides either sidewise or gentleman fashion, according to circumstances. She can gracefully act the part of a lady, mingle in the best society, talk of literary topics, and play on the piano; or if need be, she can acquit herself as a 'hired girl,' black her own boots, kindle the fire, do up the house, wash the dishes, sleep on a rug under a tree, and generally speaking, set all ordinary difficulties at defiance. She might be a female Robinson Crusoe.

For a lady to travel about in this independent manner, no country is better adapted than the United States. There, a lady—she must be white—is treated everywhere with profound respect. The greatest rowdies bow down to her and facilitate her wishes. The best chair, the best bed, the best room are in all places at her service. Wheresoever she goes, although alone, nobody meddles with her. This was therefore quite the country for a lady of Miss Bird's adventurous spirit. After having paid a visit to the Sandwich Islands, of which we gave an account in April 1875, she appears to have proceeded to San Francisco, with the view of undertaking a horseback journey among the Rocky Mountains. Except for the purpose of seeing two or three out-of-the-way places, there was no absolute necessity for travelling on horseback, because there are railway

trains for general accommodation; but Miss Bird preferred to ride in the open air for the sake of health and agreeable excitement, as well as not to be bound to go in particular directions. She accordingly adopted the alternative of 'roughing it,' and ran the risks attending a hazardous journey through high-lying wildernesses covered with snow and with, at the time of her visit, few settled inhabitants.

As regards the time at which this excursion was performed, Miss Bird has for some reason chosen to be silent. In the second edition of her book, 'A Lady's Life in the Rocky Mountains,' lately issued by Mr Murray, she does not give a single date. It is only seen that in writing to her sister, her letters begin in September and end in December. What was the year, is not stated. It is, of course, against all rule not to give dates in books of travel; but it is peculiarly objectionable in the case of North America, where events march on with such extraordinary velocity, that a place represented as having only a dozen inhabitants, may within a few years be swollen to the condition of a populous and thriving city. On this account, Miss Bird's descriptions must be read with some reserve. Though concealing the fact, there is reason to believe that her excursion took place towards the end of 1875, since which great changes have taken place through her whole route. Apart from this disqualifying circumstance, her descriptions are lively and amusing. With a keen sense of the grand and picturesque, she presents striking accounts of the Rocky Mountains, and the valleys of matchless beauty lying amongst them, at a height of eight to eleven thousand feet above the level of the sea. The dryness and purity of the air in these valleys or plains in the depth of winter, remind us of what is told of Davos in Switzerland, and in a similar way they will no doubt become, if not already so, health-resorts for American invalids.

Starting from San Francisco early in September, Miss Bird travels for a certain distance in one of the railway cars, and is struck with the prodigious

fertility and beauty of California on the Pacific slope. 'From off the boundless harvest-fields the grain was carried in June, and it is now stacked in sacks along the track, awaiting for freightage. The barns are bursting with fullness. In the dusty orchards, the apple and pear branches are supported under the weight of fruit; melons, tomatoes, and squashes of gigantic size lie almost unheeded on the ground; the cattle, gorged almost to repletion, shade themselves under the oaks; superb "red" horses shine, not with grooming, but with condition; and thriving farmers everywhere shew on what a solid basis the prosperity of the "Golden State" is founded.'

Reaching the lower mountain passés, the train winds through ravines dizzy to look at, in one place passing under wooden sheds or galleries, to keep off the snow, for a distance of about fifty miles. Then come grand pine-forests and lakes. Ultimately the 'lumbering town' of Truckee is reached, and here Miss Bird gets out in the middle of the night to find an inn, where 'pistol-shots' in the bar-room are, it is stated, of frequent occurrence. Here she procures a night's lodging. In the morning she hires a horse, after a good deal of trouble in catching it. Off she sets on this unruly snorting beast, exhilarated with the information that she might keep an outlook for some grizzly bears that had been perambulating in the neighbourhood. Caring nothing for the 'grizzlies,' she is enchanted with the magnificent scenery. 'Crested blue jays darted through the dark pines, squirrels in hundreds scampered through the forest, red dragon-flies flashed like living light, exquisite chipmonks ran across the track, but only a dusty blue lupine here and there reminded me of earth's fairer children.' Riding on, she reached Lake Tahoe, a beautiful sheet of water, which never freezes; and here, at a wooden inn, she remained a week, taking sketches of the entrancing scenery. Having finished this side-tour, she returns to Truckee, no one molesting her, and receiving on all occasions tokens of respectful courtesy.

Miss Bird now went by train on a distant excursion to Cheyenne, in Wyoming, which took her through Salt Lake Valley. Cheyenne, which started into existence in 1867, is now a city of five thousand inhabitants, with some thriving manufactories, particularly that of jewellery from the moss agate. Thus settled, it has happily lost its reputation for Lynch-law, for which, we are told, it was once specially noted. From this place Miss Bird gets forward to Greeley, a temperance colony, and there stays a night at an inn. Hot, thick with black flies. Helps the landlady to get supper ready. Goes to bed, and is awoke by swarms of bugs, which are 'a great pest in Colorado.' Gathers herself up, and sleeps on the wooden chairs. In the morning, went in a wagon to Fort Collins. The inn there was free from bugs, but full of black flies with the addition of locusts. Next she gets on in a hired vehicle to a place where she expected to be accommodated at a boarding-house; but there was no trace of a house, only a semi-ruinous log-cabin occupied by a family of Scotch descent, whose conceptions of religion were of that gloomy description which reckons bodily comfort and every act of courtesy to be sinful. There was

no choice but to ask for lodgings, the boon being sulkily granted. In this den she lives a week, helping in the miserable housekeeping, and sleeping at night on the floor. Her only mirror was the polished inside of her watch-case. The family, which had only one comb among them, bivouacked outside under the trees, which is practicable in Colorado a large part of the year.

Disappointed in not finding her way in this quarter to Estes Park, she purchases a horse, a shifty half-broken animal, from her host, and proceeds to Lower Canyon, where she is kindly lodged by Dr H—, an English gentleman, who was endeavouring to gain a livelihood by his profession, aided by farming operations. Mrs H— is spoken of as a lady-like person, who makes all the clothes for six of a family. The children very amiable and obliging, which is not at all usual in this part of the world. On this social characteristic, Miss Bird makes the remark: 'One of the most painful things in the Western States and Territories is the extinction of childhood. I have never seen any children, only debased imitations of men and women, cankered by greed and selfishness, and asserting and gaining complete independence of their parents at ten years old. The atmosphere in which they are brought up is one of greed, godlessness, and frequently of profanity.' We were never in the Western States; but from what we saw in the Eastern, we can corroborate this remark to the extent that the children ordinarily found in the hotels are noisy, turbulent, and an intolerable nuisance.

From Dr H—, a good horse, full of spring and spirit, tame and sure-footed, is procured, and on it Miss Bird succeeds this time in finding the right track to Estes Park, by the beautiful canyon of St Vrain. Two young men escort her part of the way. In a wild lofty region, the party approach a hut, near which is a big dog in a threatening attitude, and all about are heaps of peltry and the offal of animals. Who was the inhabitant of this solitary den? A trapper, hunter, ruffian, desperado. Aroused by the barking of the dog, this somewhat terrific person makes his appearance, with a knife in his belt, a revolver in his breast-pocket, and wearing dilapidated moccasins on his bare feet. He has long curling hair, and only one eye, the other having been lost in an encounter with a grizzly. He received Miss Bird affably, saying that he knew from her voice that she was a countrywoman of his. As afterwards learned, his name was Nugent. An English gentleman by birth, he had been badly brought up, took to evil courses, fled to America, and was now known as Mountain Jim, who had long been a terror in this remote district. Procuring some information from this unfortunate being, Miss Bird reached Estes Park, which at one end is bounded by Long's Peak, the American Matterhorn, fourteen thousand seven hundred feet high.

As already mentioned, there are several large Parks or valleys among the Rocky Mountains, and Estes Park is said to be the most picturesque. 'It is an aggregate of lawns, slopes, and glades about eighteen miles in length, but never more than two miles in width. Grandeur and sublimity, not softness, are its features.'

Several streams wind their way through it. Miss Bird states that the snow which falls here in winter does not thaw, but disappears by rapid evaporation. This is the same phenomenon as that said to be observable at Davos. Where not covered by patches of pine, the ground is covered with grass and wild-flowers. The nearest settlement is Longmont, thirty miles distant. In the Park, Miss Bird found a group of two or three wooden cottages, in one of which, inhabited by a Mr Evans and his family, she procured quarters. It was a cabin made of big hewn logs of trees, with the chinks between not filled up. Through these openings the snow drives in, and 'covers the floors; but sweeping it out at intervals is both fun and exercise.' As to her accommodation, she was to pay eight dollars a week, have three meals a day, and at any time home-made bread and milk in abundance. Her bed was in a detached cabin, where she was at first alarmed by hearing mysterious noises beneath the floor. They proceeded from a skunk, which had here made his dwelling. No one dared to root him out, for if interfered with, he emitted an odour that was perfectly awful, and could be smelt a mile off. A pleasant neighbour!

Having lived for a certain length of time in this, 'the most entrancing spot on earth,' helping in the kitchen, driving cattle, and riding four or five times a day, Miss Bird rode away in quest of fresh picturesque scenes, and whatever the fatigue, enjoying herself immensely. Travelling over the mountains, sometimes among the snow, she has the satisfaction of crossing the Great Divide, so called from being the water-shed of the Pacific and Atlantic. In one of her long rides, she for a time shares the hospitality of a hut along with others, and here she once more meets with Mountain Jim, who in a placid mood told the story of his wasted existence. At the close of the sad narration, she says with becoming pathos: 'My soul dissolved in pity for his dark, lost, self-ruined life, as he left me and turned away in the blinding storm to the Snowy Range, where he said he was going to camp out for a fortnight.'

Thus travelling about for months, she is put to some straits as regards her personal equipments. Speaking of her apparel, she says: 'I came to Colorado now nearly three months ago, with a small carpet-bag containing clothes, none of them new; and these, by legitimate wear, the depredation of calves, and the necessity of tearing them up for dish-cloths, are reduced to a single change! I have a solitary pocket-handkerchief, and one pair of stockings, such a mass of darns that hardly a trace of the original wool remains. Owing to my inability to get money in Denver [caused by the stoppage of the banks], I am almost without shoes, have nothing but a pair of slippers, and some "arctics." For outer garments—well, I have a trained black silk dress, with a black silk polenaise, and nothing else but my old flannel riding suit, which is quite threadbare, and requires such frequent mending that I am sometimes obliged to "dress" for supper, and patch and darn it during the evening.' We learn from various remarks that her privations do not cause serious discomposure. On one occasion she breaks out in contemptuous remarks on the frivolities of fashion, speaking almost with disgust of the fan-

tastic style of ladies' head-dress as usually seen in church.

Writing to her sister on the 4th December, Miss Bird says the cold is intense, being eleven degrees below zero, and that she has to keep her ink on the stove to prevent it from freezing. Cold as it was, and with the snow deep on the ground, and still falling, she rode off on her faithful horse 'Birdie,' on a long ride towards the plains. She says everything looked vast and indefinite. 'The fog grew darker and thicker, the day colder and windier, the drifts deeper; but Birdie, whose four cunning feet had carried me six hundred miles, and who in all difficulties proves her value, never flinched or made a false step, or gave me reason to be sorry that I had come on.' Alighting at a house thirteen miles from Longmont to get oats, she adds: 'I was white from head to foot, and my clothes were frozen stiff. The woman gave me the usual invitation: "Put your feet in the oven;" and I got my clothes thawed and dried, and a delicious meal, consisting of a basin of cream and bread.' She was recommended not to proceed; but went on through the terrible wintry scene. Luckily, she reached Longmont, but in such a benumbed condition that she had to be lifted off her horse and carried into the house, to be warmed and wrapped in blankets. Next day she perseveres in going forward, and ultimately suffered no inconvenience from the journey. Exposure to severities of this kind in England would have finished her. In the western part of the United States, the dryness of the air seems to have saved her from injury.

In one of her later excursions, Miss Bird accidentally met her two acquaintances, Evans and Mountain Jim, who appeared to be on good terms with each other, and who parted amicably. Shortly afterwards, however, she received the sorrowful intelligence that on account of some ground of quarrel, Evans on his own door-step shot Jim while he was unsuspectingly passing his cabin. Poor Jim fell to the ground with a bullet lodged in his head, but lived long enough to give his own statement, and to appeal to the judgment of God as to the unprovoked manner in which his life had been taken. What was done, if anything, to Evans for this foul murder is not stated. Miss Bird shrinks from the subject, 'as too painful to dwell upon.' This tragic end of a man in whom with all his errors there was much good, must rouse the deepest indignation at the disregard for human life, as well as at that feeble and corrupt administration of justice in the Western States and Territories of the Union, which leaves trivial disputes to be settled by private and deadly acts of vengeance. We gather from the present narrative of adventure, that the larger number of these atrocities are committed through the influence of drink, usually a coarse kind of whisky, dispensed in bar-rooms and grogeries. It was in such haunts that Mountain Jim had spent his means, and from which he returned with passions roused to madness. Miss Bird earnestly recommended him to give up the whisky which had been his ruin. But he said he could not. In short, he was one among many thousands who, by an uncontrollably depraved appetite, are constantly imperilling all that life holds valuable.

We think that with her acute powers of obser-

vation, Miss Bird might have made much more of her opportunities. Yet, though imperfect in many respects, her book is well worth perusal. Certainly, it offers an agreeable change of reading amidst the mass of trashy fiction daily pouring from the press.

W. C.

## A LIFE'S ATONEMENT.

### CHAPTER IX.—HISTORY.

*The temptation was a strong one—the victory in its way considerable.*

'WAS I a fool to act as I did?' Will Fairholt asked of himself as he hung over the bridge with a cigar in his mouth, and dropped pebbles into the river. 'If I had spoken months and months ago, she might have said "Yes" by this time. And Frank would never have grown to care for her at all. I have wasted my chances. Had I ever any chances? Why should she care for me? I don't wonder at her caring for Frank.'

There poor Will ceased his musings for a while, and fell into a state of vacuous despondency. He found himself now and again—as people in unhappy moments do—taking a mighty interest in the most foolish trifles—speculating, for instance, as to whether that little fragment of straw would float over that ripple or float round it, or whether that or this bubble would break sooner. He felt sufficiently miserable through it all. He took nobody into confidence. He had nobody to blame. Turning from the bridge, he started disconsolately through the fields with his hands in his coat-pockets and his hat pulled moodily down over his eyes. Coming to a stile, he paused there, and fell again into soliloquy.

'I asked myself if I was a fool just now. I'm pretty sure I am. Now, let me see how this case stands. First of all, Mand and Frank are engaged. Secondly—Well, if I'm an honest man there isn't a secondly in it. No; there's no secondly. I have often said to myself that I would have this aching tooth out. I never had the resolution to pull it out myself; and now that Fate has done it for me, I can find nothing to do but moon about and grumble, and coddle myself with little sympathies. I suppose I am ashamed of myself. I hope so. I faith! I wish something would come of that Eastern Question! I think I'd volunteer and have a slap at the Russians.\* I wonder if they'll shew fight, if it should come to that; or whether they'll cave in, as the Yankees say. The only chance for your disappointed swain is battle.' And Will sang with a melancholy little grin at himself:—

'I'll hang my harp on a willow-tree;  
I'll off to the wars again.'

A big baritone voice took up the song:

'For my peaceful home hath no charms for me,  
The battle-field no pain.'

'Hillo!' cried Will, starting from his reverie, and looking up.

'Hillo!' responded the owner of the big baritone voice. 'Didn't know you kept a harp in stock, Fairholt.'

The owner of the baritone voice was a handsome young fellow of three or four and twenty, with a manner a little too military to be altogether gentlemanly. A little loud and ostentations in all things was this young man. He carried a fishing-rod, and had a basket strapped across his shoulders, and his dress was aggressively suggestive of piscatorial pursuits. His hat was bespangled with flies, and his wading-boots were of the newest. He wore a huge tawny moustache, and for the rest was clean shaven. His nose might have been the better if it had a little more at the bridge and a little less at the base; and his mouth was a trifle over-large. Nevertheless he was, as I have already said, a handsome young fellow enough. He stood some six feet high in his fishing-boots, and had the shoulders of a Hercules. He was just a thought too well set up to be graceful, and the air of the drill-yard sat heavily on him. This was Lieutenant Hartley, heir-expectant to Hartley Park and Hartley Hall, and to who shall say how many thousands in the funds.

'You are just one of the men I should have wished to see,' said Will, getting over the stile and advancing to him.

'Glad to hear that. What's matter?'

'I was just speculating,' said Will, 'about that Eastern business.'

'Most people are,' responded the other, producing a meerschaum pipe and polishing it tenderly with a bit of crape.

'Will the Russians fight?' asked Will.

'Can't say, 'pon my word.'

'But what do your army fellows say about it?'

'Don't know, 'pon my honour. You see, I don't do much in that way, Fairholt. There's quite a little pile of fellows who hammer away at that until really—don't you know?—a fellow gets sick of it.'

'Well, what do these fellows say?' asked Will, again returning to the charge.

'Don't know, 'pon my word,' responded the Lieutenant, sitting down on the stump of an old tree and smoking lazily. 'What yah so dead-set on the thing for?'

'If there were any chance of a fight,' Will answered, sitting down on the grass beside him, 'I'd join to-morrow.'

'Would you, by Jove?' returned the Lieutenant languidly. 'Get awfully fagged in a fortnight. It's dullest game in the world.'

'I don't think I should care about the barrack routine,' Will answers. 'But I should like to have a slap at Old Nicholas.'

'Always thought you a peaceful fellow.'

'Well, I am blood-thirsty enough now for anything.'

'There's the Guvnah,' said the Lieutenant after an idle puff or two, 'knows more about that business than anybody. War with Russia affects the funds, don't you know? Old fellah knows everything about everything that affects the funds.' The Lieutenant looked lazily about him, and continued: 'Sun's too bright to-day. Can't kill anything before evening. Fish won't rise. Come and lunch?'

Suddenly flashed through Will's mind the

\* The reader will remember that the action of the story is laid about the time of the Crimean War in 1854, when Nicholas was Czar.

thought of Maud. Your lover is your only true poet, and he saw her—actually saw her for the moment—with her fresh clear face and hazel eyes and cool white dress. A shaded room—cool and quiet—with here and there a stray fleck of sunlight in it. A very casket of a room, and Maud, its one jewel, shining there alone. Now Will Fairholt was not an imaginative man by nature; yet if I by means of words could shew you this sweet sight one half as clearly as he, by force of fancy, for the moment saw it, I were a better artist than I am. The vision decided him, and he rose to his feet with a brisk: 'I will; thank you.'

'What's your hurry?' asked the Lieutenant. 'Hungry? Now I come to think of it, so am I.'

Lieutenant Hartley was not a talkative man, and conversation somewhat languished. Will communed with himself once more. 'Is this wise? I don't know. I must get away somehow. If there should be war, I will be in the thick of it. It's every man's duty to help to put down a great bullying fellow like that Nicholas. Yet I don't,' thinks Will, with a melancholy laugh at himself, 'if I should have thought of the duty if things had gone otherwise with me here. That big barbarian might have eaten Turkey in peace for me, if it hadn't been'—There Will groaned, and cut down a dog-rose with warlike vigour.

'Bit out o' sorts, Fairholt?' asked the Lieutenant.

'N—no,' said Will, with a little uncertainty in his voice.

His military companion looked down on him with a satiric grin, and within himself commented: 'Hit, by Jove, and hit hard.' He said nothing, however; and Will strolled along with his hands in his pockets and smoked in stoic silence.

'You idiot'—so in thought he apostrophised himself—'*can't* you be quiet. Need you take everybody into your confidence.'

Hartley Hall declared itself at last, and Fairholt turned with the Lieutenant into that gentleman's own apartments for a wash before luncheon. As they emerged again upon the corridor they met Maud, as bright and sweet and fresh and innocent and happy a sight as one might wish to see. She quickened her step a little to greet Will, and shook hands with a glad cordiality. She noticed nothing especial in his shy and reserved manner; and they went down-stairs side by side, she chatting gaily about some garden-party or other to which she either had gone or was going, and he fairly tingling all over at the remembrance of the innocent pressure of her hand.

Here, in the breakfast-room, was Benjamin Hartley, clad in an alarming tweed, and having a white hat on. The white hat was perched at the back of Mr Hartley's bald head, and he mopped his face with a yellow bandana. 'Ah! ain't it 'ot?' said Mr Hartley, puffing upwards at his own glowing countenance, and mopping anew. 'Come to pick a bone along with us, Mr Fairholt? Glad to see you. We shall be a-looking at you like one o' the reg'lar members o' the family now, you know. You've heard o' this young lady and her capers, I daresay?—Let's have some iced champagne, Lieutenant. I've been a-tramping over my grounds till I'm as 'ot as Dan'l in the fiery furnace. Ain't it 'ot?'

'Awful,' says the Lieutenant.

Mr Hartley taking off his hat, laid it upon the table and sat down. The Lieutenant rang the bell, threw the hat to the footman who appeared in answer to the summons, and requested Will to be seated by Maud, who blushed a little still at Mr Hartley's recent allusion. The soldier calmly went through his lunch in silence. The old gentleman flowed on, mellifluous.

'I was up in town last week, and called on that young brother o' yours, sir.'

'Indeed?' said Will, nothing else occurring to him to say.

'Yes, I was. He's a fine young fellow, and I'm proud of him. Now what I like about him is, as there ain't any mistaking him for anything but what he is. He's got "Swell" wrote on him all over. Now that's what I like to see. You can bet your hat on him being a thorough-bred un directly as you set eyes on him. Now, here's the Lieutenant as won't have it at all, you know, as it takes a lot o' generations to turn out that kind o' pattern. He ain't a bad sort himself—the Lieutenant—for home-maunifacter.—Now, don't you go and flare up afore company, young man. Look at him,' continues the old gentleman in a high state of self-gratulation; 'as savage as if his father was a red rag an' him a bull.—He's a clever young fellow that brother of yours, sir. I found him at work up there painting a picture—a proper picture. Just to see him a-slapping it on was a wonder. It was a work of art, sir, pretty nigh as big as that door. Says he's goin' to make his fortune with it. I don't mind telling you in confidence—now don't you go and split, you know—as I've put a agent o' mine on to that picture, and told him to keep his eye on it. He's a fellow as knows all about everything, that agent, and he's down on a picture like a 'aunner, and talks about 'em like a auctioneer. I don't mean to have anything but good work on my walls. And I said to my fellow: "If that picture's up to the mark," I said, "buy it, and don't boggle about the price." I don't stint in price when I get a good article.' Mr Hartley made his statement in a tone which seemed to demand an answer; and Will awoke from his own fancies in time to reply: 'Certainly not,' at a venture.

'It strikes me, you know,' said Mr Hartley, speaking with his mouth full, and fanning himself with the yellow bandana, 'as one o' the best things about matrimony is, as it makes a man industrious. Now your brother's positively a-slaving. I like to see it.'

Maud, who sat between Will and her uncle, directed an appealing glance to the old gentleman, who gave a hasty gulp and broke into a great guffaw of laughter. Maud blushed to the roots of her hair and dropped her eyes.

'Look yah! Guvnah!' interposed the Lieutenant. 'Leave the girl alone.'

Maud's blushes became if anything a little deeper. The old gentleman burst into a new shout of laughter.

'Ow awful 'ot laughin' does make a man, to be sure.—Pass the flarrit, Lieutenant, and don't be comin' any o' your swell airs over your father.—Why, you ain't eating anything, Mr Fairholt! It's this fiery weather as knocks the appetite to pieces. Though I must confess as mine takes a good deal o' spoiling. I always was a good hand

at a knife and fork. Why, when I was younger, I've sat down to my half-pint o' four half and had a bit o' bread-and-cheese for dinner, with a onion for a relish, and I've enjoyed it as if it had been'— There the old gentleman, directing a mischievous glance towards his son, burst into a new guffaw, and found it necessary to get up and stamp about the room. After this he leaned against the mantel-piece, puffing and panting, and mopping his red face and bald head with great ardour, going off into a little explosive chuckle now and again. The Lieutenant solemnly wheeled round in his chair and regarded him through an eyeglass. Will, slightly embarrassed, less by the father's revelations than by the Lieutenant's manner, looked seriously at his plate. Maud—forgetting her own discomfiture—was mischievously merry. The old man having chuckled and panted himself into a condition of composure, took a final mop at his countenance and resumed his seat. The soldier dropped his eyeglass and took up his fork.

'I was just a-saying'— the old gentleman recommenced.

'Guvnah!' said the Lieutenant in a warning bass.

'Sir, to you,' returned his father.

'Stop it!'

The old gentleman went into another roar of laughter, and recovering from it, turned to Fairholt: 'I like to poke him up a bit. Here's a gay young flower a-springing from the soil. But he don't own no kin with the soil, you know. Bless your heart, he's superior to that. He don't recognise nothing earthy about him. And so I like to rough him up a bit, and shew him where he comes from and who he is. Not afore company, you know,' added the old man with a sudden seriousness. 'But afore the family, what's it matter?'

'I know where I come from,' said the Lieutenant in his laziest drawl. 'I wish I didn't.'

'Now, young un, young un,' said the old gentleman, rising and patting him on the shoulder, 'don't take it to heart too serious. I know it's a blow to your fine feelings, my boy; but you'll overlive it.'

'Dessay I shall,' responded the young fellow gloomily. 'But I don't like it.'

The old gentleman, still patting the Lieutenant on the shoulder, turned and addressed Will: 'Come to the billiard room and knock the balls about a bit, Mr Fairholt?'

Will was just about to answer 'Yes,' when catching Maud's eyes, he saw her make a signal of dissent, and hesitated.

Noticing this, the old gentleman said: 'Well, I don't know as it isn't pleasanter out o' doors on such a day.'

'Oh, much pleasanter,' said Maud. 'Come into the gardens.' With that she tripped away, returning in a minute with a sunshade. Mr Hartley had already disappeared, and the Lieutenant was lounging after him when Maud returned. She placed herself at Fairholt's side, and they went out together. When they reached the garden, she laid a hand upon his arm, and prepared for confidential chat. Will and she had been close friends for the past five years, and were as intimate as brother and sister. The touch of her hand and the rustle of her dress beside him, her

fresh young face turned up to his, the sister-like confidence in which she seemed almost to nestle by him, the serene quiet of her manner—all these things were bitter to the young man's heart—were bitter because they might have been so sweet. The broad sunlight flooded the garden—the shadows cast here and there were very cool and pleasant to the eye. The arbour in which Maud and Will sat down was deliciously shady. The distant landscape lay folded in silver haze. The swallows were astir upon the river. A little wind touched the leaves of the arbour now and again, and died. So sweet—so sweet, so framed for love the time. So fit the place for lovers' whisperings. So glad the lazy summer afternoon!

For a long time after that day, when Will Fairholt thought about it, he looked upon himself with a kind of wonder, and thanked heaven that he held back the words which would have done his own conscience and his brother wrong. Let us confess that it was hard—that the temptation was a strong one—that the victory was, in its way, considerable.

'Will,' said Maud, leaning across the arbour-table, 'I want to speak to you very seriously. I know I can trust you.' She blushed a little, and looked the prettier for it. 'I am a little anxious about Frank. When uncle came from town the other day he dropped a hint about Frank's money-matters. Uncle has things to do even now with a great many people in town, and he has found out somehow that Frank has been borrowing money. I know nothing about it beyond this—that he told me when I next saw Frank to warn him against having anything to do with a man named—Tasker, I think.'

Will nodded.

'Do you know him?'

'I know of him,' Will returned. 'Frank was a little careless some months ago; but that is all over.'

'You know,' pursued Maud nervously, 'that uncle is not always very delicate. He doesn't see how unkind it would be in me to speak to Frank about such a matter. And so'—Poor Will went down altogether before her appealing eyes—'and so I thought I might ask you to speak for me.'

'I have spoken already,' Will replied; 'and if Frank is at all the man I take him for—and I know that a better fellow doesn't exist—he has done with that kind of thing for ever. It's very natural, you know,' pursued Will, gathering strength as he went on, 'for a young fellow like Frank to be careless about money-matters, so long as he has no definite aim in view. But now'—and there Will tried to smile—'he has an object in view, Maud, and will do better, I am sure. I had a letter from him this morning. I think I have it with me now. Yes; here it is. Listen! "I have made up my mind finally for work and economy. For a week past I have been slaving. If I go on at my present rate, I shall die a millionaire. I am spending next to nothing, and hope to be in a position to offer Maud a home in a year at the outside." Then further on he writes again: "I paid Tasker on the day of my return, and quarrelled with him of set purpose."—So I think,' said Will, putting the letter into its envelope and returning it to his pocket, 'that you need have no fear.'

It was not in offering this defence for his brother that the loyal young fellow found any difficulty; but he longed, with an indescribable longing, to say how he loved and how he despaired; how impossible he felt it to be thus near and to make no sign; and then to go away somewhere for ever and bury his pain among strangers, or fight in some great cause on some far battle-field, or—He kicked out those longings, as became a man; and they returned again and again, as became his passion.

'You need fear nothing, Maud,' resumed Will, after a little silence. 'I know Frank well. I am rather glad you have heard, because it will give you the greater confidence in him afterwards. And when you see how well he can fight in a good cause, you'll not like him any the less for it, you know.'

Maud rose to her feet, not caring perhaps to have the springs of love laid bare after this fashion. The old gentleman strolled up to the arbour. Will, half glad and half sorry to escape from conference with Maud, seized his opportunity, and plunged into politics.

'Fight?' said Benjamin Hartley in answer to his queries. 'You mark my words, sir. There's heaps o' fellows going about as think they know a lot, trying to persuade me as the Rooshans 'll back out. Now I don't mind telling you—regarding you as one of the family—and knowing as you don't meddle in money-matters, and won't spoil my game— Now it's in confidence, mind you.'

'You may rely upon me,' answered Will, a little stiffly.

'Don't rough up,' said Benjamin Hartley, drawing him aside. 'There 'll be war in another three months. Mark my words. And I'm a-standing to win or lose half a million on it. That's what I'm a-doing, Mr Fairholt. So anyhow, I back my opinion pretty strong; don't I!'

(To be continued.)

### CURIOUS STORY OF A DOVE.

FROM a lady contributor we have received the following pleasing narrative:

My attention having been drawn to the incident related in your *Journal*, November 15, 1879, under the heading of 'A Welcome Guest,' I thought it might interest those to whose recollections it was specially addressed, and any others of your readers who may have been struck by it, to hear of a somewhat similar visitation which, under very sad circumstances, happened to a relative of my own. The lady in question had just sustained the greatest loss that can befall a woman, in the death of her husband under circumstances that rendered the blow a more than ordinarily crushing one. So sudden had it been, that no time for preparation or farewell had been vouchsafed; and the sudden rending of such a tie, after over thirty years of ever-increasing affection, left her singularly desolate, as she was childless and without any very near relations. The house in which she lived was completely detached, standing in a large old-fashioned garden, with an extensive lawn, planted with shrubs and large fruit-trees, some

of which came close to the windows. A veranda ran round the back of the house, its sloping roof being just under the windows of the sleeping-rooms.

One night, while in the first freshness of her sorrow, she went to her bedroom at the back of the house at her usual hour, ten o'clock. It was in the month of December, and curtains were drawn and a fire burning in the grate. Half mechanically she walked to the dressing-table, which stood before the window, and was in the act of laying her watch upon it, when she heard a low sound, that seemed to her half a moan of pain, half a plaintive appeal, and altogether such as she had never heard before. With suspended breath and greatly startled, she listened. It came again, louder and more prolonged. With nerves so shaken as hers were by her recent sorrow, she found it impossible to remain alone in the room with the noise unaccounted for, and with a feeling of something like terror hastened to an adjoining apartment, summoned a friend who was staying with her, and brought her back to the room. The sound continued; and her friend being unable to account for it, the servants were rung up. The room was carefully searched; drawers were opened; every article of furniture that could contain any living creature or give any clue to the origin of the sound, was examined. The noise all the time continued, sometimes louder, sometimes softer, but never quite ceasing; and all that could be decided was that it was most distinct in the neighbourhood of the window where the lady had first heard it.

The servants, seeing how much affected by it their mistress was, and unable to find any cause for it, had tried to persuade her it must be the wind in the chimney or the trees outside; but the night was calm; and the sound was altogether so strange, and it seemed to all so unlike anything they had ever heard before; the most ingenious theory failed to account for it. More and more the belief that it must be something supernatural impressed the lady's mind; and though eventually it ceased, and silence succeeded, even the presence of her friend who remained with her at night did not reassure her sufficiently to induce sleep.

In the morning the mystery was explained, so far as so strange an incident was capable of explanation. The gardener had observed the day before a white pigeon in a large pear-tree that grew close to the window of the room the lady was occupying. He was much surprised, for there was no pigeon-cot near, and he had never seen the bird before in the garden. As the day wore on, finding it still remained in the tree, he made several attempts to catch it; but it always eluded him, pertinaciously returning to the tree.

When he told his story, no doubt could be felt that, breaking the silence of the night in that retired spot, it was the voice of the pigeon that had sounded so strange and unaccountable; but the lateness of the hour, when birds of its kind have as a rule long gone to roost, and the possibility of a dove being there at all never having occurred to any one, none had recognised it at the moment. From the distinctness of the note—for all present had fancied the noise might be in the room—it was evident the bird must have been on the roof of the veranda immediately under the window. In the morning it had vanished, and was never

seen again; although the lady, desirous of ascertaining if it were really a pigeon, and with some idea, if it could be found, of keeping it, gave orders that it should be traced and, if possible, secured. Dismissing from our minds, as untenable, anything that here savours of what is termed the supernatural, one is bound to admit that it was a strange and touching coincidence that brought a bird so familiar to all minds as an emblem of wedded love, in apparent loneliness and distress, to utter its plaintive lament at so unusual an hour under the window of one grieving under such a bereavement as hers.

## RECOLLECTIONS OF AN EQUESTRIAN MANAGER.

BY C. W. MONTAGUE.

### SECOND PAPER.

THE building we had engaged for our performances at Cardiff had a curious history. Some few years previous there had been a waste tract of land bordering on the harbour, which had been a constant source of trouble to the authorities, in consequence of its lying low and being flooded by the tide. A market-gardener named Matthews, at the neighbouring village of Crockherbtown, set his heart upon this desolate waste, and saw a possible bargain to be got out of it. After some little negotiations he obtained a lease of the entire tract for ninety-nine years, at the nominal rental of one hundred and fifty pounds per annum. Scarcely was the ink of this document dry, when the energetic gardener erected a conspicuous notice-board announcing that 'Fourpence a load was given for dry rubbish.' In a wonderfully short time Father Neptune was driven back a considerable distance, the land was levelled, building was in operation, and terraces and streets laid out where lately the wash of the tide had left its daily deposit of loathsome mud. A sea-wall was built, which still further secured and enlarged the reclaimed tract; and in the midst of this new-born town there shortly arose the imposing edifice known as 'Temperance Hall,' the neighbourhood itself being called 'Temperance Town.' 'I made my first bit o' money,' said the now wealthy Mr Matthews, 'through being a temperate man myself; and I mean to spend some of my money in promoting temperance in others.' In this he has no doubt been successful to a large extent, as far as zeal can insure success.

The first incident connected with our stay at Cardiff which occurs to my mind—and probably it is the first to strike me because of its extremely ludicrous nature—happened during the performance of an equestrian spectacle entitled *The Tournament, or Kenilworth Castle in the Days of Good Queen Bess*. For the processional portion of the entertainment, we had to engage the services of a large number of supernumeraries; and of course it was highly desirable that the Virgin Queen, who naturally constituted a chief attraction in the piece, should be worthily represented by a handsome woman of good presence and self-possessed bearing. Walking down Bute Street one day, I chanced to espy, serving in a fruiterer's shop, a good-looking woman, who, judging from her faultless style

whilst engaged in supplying her customers with the luscious fruits around her, seemed to be well qualified to sustain the regal dignities I had at my disposal. Entering the shop, I made a small purchase, asked a few casual questions, and then, as adroitly as I could, introduced the subject which lay uppermost in my thoughts. At first the maiden was coy and required a little rhetorical pressure. So I pictured to her the beautiful costumes in which the lords and ladies of her retinue would be dressed, and finally described in glowing colours the gorgeous apparel that she, the Maiden Queen, would wear. My sartorial appeal proved successful. The lady consented to take the part—though, quietly speaking, I thought it was the 'part' that had taken her! She attended a rehearsal, was highly gratified at the stage homage she received, and seemed carried into a seventh heaven of delight when seated on her throne surrounded by her attendants, ready, like so many slaves, to do her queenly bidding.

On the first night of the piece everything went well until the close. I had already passed out of the ring towards the front of the final procession, and had retired to my dressing-room to prepare for the next portion of the entertainment, when suddenly Mr Ginnett, the proprietor of our circus, rushed in greatly excited, and exclaimed breathlessly: 'There's that stupid fool of a woman still sitting on her throne!' I immediately hastened to the ring doors, when to my consternation and dismay I saw the Queen seated composedly on her throne; not a soul with her, and the boys in the gallery pelting her vigorously with orange-peel. I beckoned to her to 'come off;' but she seemed to have lost all presence of mind, and sat stolidly there, occasionally dodging some of the larger pieces of peel which threatened the integrity of her wonderful headgear and the enormous ruff round her neck. My endeavours to attract her attention being fruitless, I sent one of the grooms to fetch her off her throne; and then, amid roars of laughter and with greetings from all parts of the house, Her Gracious Majesty gathered up her royal robes about her and made an undignified bolt out of the ring.

An explanation of the 'hitch' was afterwards forthcoming. Harry Ginnett—the brother of my employer—whose duty it was, as the Earl of Leicester, to lead the Queen off the throne and retire at the close of the procession, had, for a joke, whispered to her that she was to stay there till sent for!

I have already mentioned that Mr Matthews, the owner of the building in which we performed during our stay at Cardiff, was an earnest disciple of temperance principles himself, and anxious to encourage the practice of those principles by others. Amongst the various means adopted or patronised by him, frequent lectures were given in Temperance Hall; and in consequence of this, we had agreed to an arrangement to use the Hall for five nights only in the week, each Friday evening being left free for the purposes alluded to. On the other hand, by way of concession to us, Mr Matthews had come to an understanding with the conductors of the temperance meetings that at the close of the proceedings on each Friday night, Mr Ginnett's manager—myself—should be allowed to address the audience and 'give out' before them all, our

programme of attractions for the ensuing week. For about six or seven weeks this arrangement was carried out to the letter, with no small benefit to ourselves. It was in fact a most direct and telling advertisement, more powerful even than the columns of a newspaper; for the building was on these occasions invariably crammed, and a personal appeal is by many degrees more forcible than an appeal in print. When the last speaker at these meetings had subsided into his seat, the chairman himself, or perhaps some other gentleman on the platform, would blandly state that 'Mr Montague wished to engage their attention for a few moments in order that he might announce to them the nature of the forthcoming performances in that building; sometimes a good-natured eulogium to the effect that our entertainment was 'of a most innocent, instructive, and interesting description, and deserved the hearty support of all present.' What could be more favourable to us than this?

Thus introduced, I stood up and 'gave out,' as the phrase goes, all the novelties and attractions of the next week's programme, and did my best to secure a goodly number of recruits from the crowded benches around me. This amicable arrangement was, as I have already said, continued without let or hindrance for the space of six or seven weeks. But when the next Friday night came round there had arisen a new chairman who knew not Matthews; or who, at anyrate, regarded not the sensible arrangement which that gentleman had made with us.

It was a strict tectotalers' meeting. Of this I was fully aware beforehand; and had I not been apprised of the fact, the uncompromising tone of the speeches would have informed me that I had to deal with people of extreme views. I had certain misgivings, but put them aside and awaited the issue. At the close of the last speaker's address I prepared myself for the usual request to be 'permitted to make my appeal. Alas! my expectations were in vain. No one paid me the slightest heed. But I was not going to allow matters to remain thus. Standing up boldly from my seat at the side of the platform, I commenced to address the audience. The chairman, nonplussed by this unexpected addition to his programme, hurriedly inquired who I might be; and having ascertained that I was the manager of the circus that held its daily performances in that building, he was apparently struck with amazement to find me on my legs addressing his meeting. I pretended to be unconscious of the dilemma in which the chairman found himself, and proceeded with my opening words, until some one sitting near me pulled at my coat-tails, and drew my attention to the fact that the chairman wanted to speak to me. Yielding instant obedience to his official authority, I proceeded in a low tone to explain matters to him, assuring him that it was all correct, that I was doing precisely what I had previously done for the past six or seven weeks, and that Mr Matthews himself had agreed to the arrangement. But explanations were useless. I was duly informed that this was a strict tectotalers' meeting, and that none but those who were members of the body and had taken the pledge could be allowed to address the audience. I was therefore out of place and must not speak. So decided the chairman; but I could not submit to be snuffed out

in that style. What would Mr Ginnett and the members of the company have thought of my capacity as a manager had I proved unable to 'manage' a little hitch like that? An idea struck me, and without further thought I immediately acted upon it. Turning to the chairman I said, in rather a confident manner, as though satisfied that I had solved the difficulty and would be allowed to proceed: 'Sir, I have taken the pledge'—

Without another question, or even another word, the good gentleman stepped quickly to the front of the platform and exclaimed triumphantly: 'Ladies and gentlemen—I am happy to say that we have got the thin edge of the wedge in; the manager of the circus has taken the pledge!'

A perfect tumult of applause greeted this unexpected announcement—a most fortunate matter for me, as it gave me time for reflection. After quiet had been restored, the chairman added, with a gesture and tone of voice which seemed to welcome me into the brotherhood: 'Mr Montague will now address you!'

Another burst of applause greeted me as I again stood up. How to go on with my speech I did not know; however, I began: 'Ladies and gentlemen, I have taken the pledge'—Louder applause than ever—more time for reflection. 'I have taken the pledge to produce in this building, to-morrow night, the very best performance we have given this season.' Amazement was depicted on every face, and exclamations began to arise from the platform and from other parts of the house. But without the slightest pause, and paying no heed to the gathering storm, I went on at the top of my voice: 'It will be the grand romantic equestrian spectacle entitled Dick Turpin's Ride to York, or the Death of Bonnie Black Bess, that famous steed being represented by the most highly trained mare in the world.'

I could not proceed. A deafening storm of hooting and yelling and hissing drowned my last words, nor would the audience be induced to listen to me again. I therefore quietly sat down, and soon afterwards the meeting terminated.

I have not yet forgotten the comments that were made by the local press upon the foregoing proceedings. A column or more in each newspaper was devoted to a humorous account of the affair; and it was noised abroad and commented upon in a manner not altogether pleasant for these worthy people, whose zeal in an undeniably good cause had somewhat outrun their discretion.

The mention of our performance of *Dick Turpin* reminds me of a little incident arising out of it. Mr Ginnett had been absent from Cardiff for several days, in consequence of the death of his father; but after the funeral was over he had returned to his duties, and on the following Saturday took the part of Dick Turpin, while I appeared as Tom King. On the following morning, Mr Ginnett wished to go to church, and desired that I should accompany him thither. A little before the service commenced, we entered the sacred edifice, walking up the side aisle, which was skirted on either hand with free seats, already occupied by the Sunday-school children and the humbler classes. As we passed these, a lad, in a voice loud enough to be heard for some distance round, exclaimed to a

companion sitting near: 'Look, 'Arry! there goes Dick Turpin and Tom King!' Our feelings, after being thus pointedly alluded to, can be better imagined than described. I know that I felt decidedly hot and uncomfortable, and wished myself somewhere else.

When, at the close of our stay at Cardiff, the occasion of my benefit drew nigh, I thought that the introduction of a good song or two would be an acceptable addition to the programme. Happening to mention my desire to Mr S—, a tradesman with whom I was well acquainted, he said he knew of just the person for the occasion—a young lady of considerable acquirements, who could sing beautifully, and who, though at one time in good circumstances, was now poor, and would be glad of a little money. An interview was arranged, at which she gave a specimen of her vocal powers. Terms were agreed upon, a rehearsal gone through, and eventually the evening came round. I had announced her name in the advertisements and placards as 'Miss Louisa Vinning, from London.' The song she had agreed to render was *Beautiful Star*, with another in reserve, in case of an encore. When the supposed 'star' arrived at the hall, the ladies of our company were of course alive with expectation, not unmixed with envy, of the interest centred in the new-comer.

The song was given most satisfactorily, the singer being rewarded with a rapturous encore; in response to which she sang another song, the title of which I now forget. Again the audience applauded, and the fair songstress withdrew. At the close of the performance, Mr Matthews, who had honoured my benefit with his patronage and presence, came round to me. 'Don't you know,' asked he, 'who that young girl is that sung to-night?' 'Not the slightest idea,' I answered. 'S— introduced her to me. Who is she?' With a gesture and look which made me suppose that I had made some outrageous mistake, he replied: 'Why, it's "Polly Buttonhole!"' In answer to my plea of ignorance, and the desire I expressed to know who Polly Buttonhole might be, Mr Matthews then gave me her history, by no means an exceptional one: A happy childhood, a heartless lover, disgrace, distress. That is the epitome of her sad life, as narrated to me by Mr Matthews.

During our stay at Cardiff, the American circus of Howes and Cushing arrived in the town, bringing with it Tom Sayers the famous pugilist, who had joined the company some time previously, and was now travelling with it from town to town, causing a great attraction, and filling the proprietors' pockets. The agent in advance having advertised a 'one-night stay' in Cardiff, I felt sure that our house would be empty, unless I adopted some plan to avert so undesirable a result. Mr Ginnett being temporarily absent, I had to use my own discretion as to the proper course to pursue. I determined to issue free orders, for that night only, to all parts of the house except the reserved seats. Ten thousand of these tickets were printed, and promptly distributed from door to door street by street, until the whole number were delivered. Special attractions were announced by placards; and when the momentous evening arrived, enormous

mobs, twice as many as the hall would hold, besieged our doors at an early hour; the excitement and anxiety to get in being so great, that it would have been a hopeless task to attempt to take the tickets of the people as they passed through. I therefore ordered that the doors should be thrown wide open, and the crowds allowed to pass inside until all the seats were full. Feeling convinced that a large number of those still outside, being bent upon witnessing the performance, would rather pay to come in than go away again disappointed, I went out to them, and expressed my regret that so many were unable to obtain entrance. I explained that every part of the house was full except the reserved seats, and that the price for admission to these was two shillings each. Very many more than we could accommodate came forward with their money, and these were passed in until every seat was occupied. Upwards of seventeen pounds was thus taken; while it is probable that, had we not adopted the steps above described, we should not have taken any money at all.

Before the close of the performance, Sayers came across to pay us a visit, their entertainment being over before ours. Looking round with evident amazement at our crowded benches and reserved seats, he exclaimed: 'By Jove, you're doing a rare business here!'

Talking of Sayers reminds me that while our company was performing at Greenwich in 1860, we were the first to introduce Sayers into the circus ring. Shortly after his fight with Heenan the American, Sayers went to Liverpool to visit a relative of mine, Mr Stent, one of his principal backers; and whilst there he was invited to meet at dinner the members of the Stock Exchange, by whom he was presented with a purse of a hundred and fifty pounds. It would have seemed incredible to any one at that time, that during the comparatively short space of nineteen years—this is written in 1879—public opinion upon the question of prize-fights could change so quickly as it has. Such, however, is the case, and a happy change it is.

Having suggested to Mr Ginnett that it would be a great draw if we could get Sayers to appear in the circus, he agreed with the idea; so I immediately telegraphed to the champion, making him an offer. This was accepted. On the day fixed for his appearance, I set off in good time for his residence in Camden Town in a light carriage, drawn by a pair of ponies. On returning, the vehicle contained Sayers and his son, Harry Brunton, and myself. All along the route south of the river there were plenty of people on the look-out for us, who had by some means heard that we should pass. But when we arrived at Deptford, the crowds were immense and the cheering continuous. Here the mob, having taken out the ponies, drew the carriage with its occupants at a fair speed through the crowded streets the whole distance from Deptford to the *Greyhound* hotel at Greenwich, outside which, while we were taking some refreshment, an immense concourse of seven or eight thousand people assembled. At 7.30—the time at which our performance ought to have commenced at the circus—not a dozen souls had entered the building. Ginnett, with all his experience, was puzzled to account for this, and

came in hot haste to the *Greyhound* to learn where I was and what I was doing. With great difficulty he managed to make his way through the dense crowd—the sight of which quite accounted to him for the emptiness of the circus—and entered the hotel. The next problem was, how to get Sayers to the circus. It was decided to harness two powerful horses to a brougham, and drive through the crowd as best we could. This succeeded. The people followed us, and the circus was soon filled to overflowing; and the evening's performance, including a friendly encounter with the gloves between Sayers and Brunton, was in every way a success. As an illustration of the extraordinary popularity of Sayers at that time, I may state that numbers of people gave half a sovereign apiece for the simple honour of being allowed to shake hands with him!

I am here reminded of one or two other curious incidents connected with our stay at Greenwich. One of the clowns we had there was rather addicted to his glass; and sometimes, when under the influence of potent liquor, would indulge in practical jokes without stopping to measure the consequences, or even trouble himself about them. On the day in question, being somewhat the worse for what he had taken, he had been lying on a couch for some time, groaning occasionally as though in pain, and frequently exclaiming: 'O dear! I feel as though something were going to happen in this house to-day!' This strange foreboding was repeated many times, but no one paid him any heed. Presently, however, just as footsteps were heard in the room above—noticed by the clown, though not by us—he repeated his curious prediction with greater emphasis than ever: 'I'm sure something's about to'—He had not finished his sentence when an awful crash and clatter were heard overhead, as though the house itself were coming down about our ears. Every one except the clown himself started to his feet, and rushed out and up-stairs, to endeavour to learn the nature of the terrible catastrophe. In the room whence the noise had proceeded a pretty scene presented itself. On the floor in front of a chiffonier, whose two doors stood wide open, was a confused heap of china and glass—cups and saucers, vases, and other ornaments, and 'miscellaneous effects'; all thrown together and mostly broken. Close by, and in tears, stood the unfortunate servant who had been sent to the chiffonier. The landlady had already entered the room, and was in great distress at the damage done to her property, but still more so at the connection which the occurrence had with the drunken clown.

As it transpired years afterwards, the clown had been at work at this chiffonier, and had so arranged and piled up its contents, that the moment the key was turned and the one door opened, the other would fly open also, and precipitate everything on to the floor.

On one occasion we were preparing for our promenade through the streets, when a kind of 'hanger-on' to our company, who, through his invariable politeness of manner, had been nicknamed 'Sweet William,' was deputed to ride a highly trained black mare, one of whose tricks consisted in undoing her girths with her teeth and removing her saddle. Sweet William was the last to leave the stables, the others having

passed out before he had mounted. Suddenly loud cries of 'Murder!' were heard to proceed from the stable, and I shouted out as I went towards the spot: 'What's the matter? Who is it?' 'It's me,' replied the agonised voice of Sweet William. 'Make haste—the mare's got hold of my toe!' And sure enough I found the man on the mare's back, writhing and twisting about, his face describing the most painful contortions, and his toe in the mare's mouth! The more he struggled, the harder she pulled at what, through some misadventure, she mistook for the girth-straps. Perhaps also she mistook his shouts for the vociferous cheers of a pleased audience, and thought it was 'all right;' and at it again she went with redoubled vigour. By some means he must have made some slight movement, which the mare thought to be her signal to perform the trick, and went to work accordingly. However, the man was speedily released from his awkward predicament, and the cavalcade proceeded on its way; but it was a long time before the incident itself ceased to excite a good-natured laugh at the expense of Sweet William.

#### ARCACHON AS A HEALTH-RESORT.

It is for the doctor, no doubt, to decide what invalid should be kept at home, and what invalid should face the real or imagined difficulties of a foreign sojourn; but we cannot help thinking that there is often too great a repugnance to going abroad, and that the opinion of the man of skill may occasionally be somewhat biassed by the feelings of the patient. Could any anticipators of evil and discomfort have had a glimpse at our comfortable little colony in the pine-woods at Arcachon; could they have seen us in spring breathing the sweet balmy air of the forest, or have felt the genial glow of our wood and coal fires when the evening drew on; could they have visited our market and seen our fish, our flesh and our fowl, above all our mutton, that much-thought-of desideratum for the invalid—they would have been convinced there was no great hardship in spending a time among our foreign neighbours at Arcachon.

The pretty little French town of Arcachon is generally better known for its oyster-beds than as an approved sanatorium. It is situated about thirty-five miles south-west of Bordeaux, on a little inland sea called the 'Bassin d'Arcachon,' an offshoot of the Bay of Biscay, whose great swelling waves are heard roaring in the distance. It is surrounded on all sides by extensive pine-forests, which seem to act in the twofold capacity of guardian angels in shielding against all the cold breaths from without, and as angels of healing in spreading their resinous aroma all around. Arcachon is an exceedingly prosperous little town. Its fishing is extensive, and its numerous oyster-beds are a source of well-paid employment to the women as well as the men. There are rich and constantly increasing gleanings to be gathered from its winter visitors; but the summer months are its rich harvest-time. Then its rows upon rows of pretty villas, running along the shore of the Bassin for several miles, as well as those situated in the forest, are inhabited for the most part by folks from the city of Bordeaux and from the north of Spain, but with a sprinkling of visitors

from many other towns and countries. The town is divided into two parts, the *Ville de Mer* or *d'Été* and the *Ville d'Hiver*—Summer Town and Winter Town. The *Ville de Mer* has in its season many charms. When fleeing from the cold and the rain of the summer of 1877, we arrived at one of its large hotels in the beginning of September, every house seemed full to overflowing; and its trim houses with their shady porches and gardens, its avenues of stately trees, its placid little sea, studded with hundreds of little white sails, its beach and its bathers, its bustle and its lively French chatter, made up a very enlivening scene. But the season over, those villa-streets are all but deserted. The *Ville d'Hiver* has also been deserted; but there—its bathers and summer visitors being gone—the villas are put through a transition state, and come out in order and winter array, ready for a different class of visitors—principally those who as refugees from more inclement spots come to winter amid the mild air of the forest.

For it is the *Ville d'Hiver* that is the winter and spring home of the invalid. To reach it you mount northward up a pretty steep ascent from about the middle of the *Ville de Mer*, and pass round or through the beautiful gardens of its Casino, turning at every few steps to admire the little town and its calm little sea beyond it; and all at once, on reaching the summit, you find yourself in an enchanted ground, a region of still beauty and peace. It is not gorgeous; it is not like the Riviera, with its glittering sea and variegated heights. It is the land of peace, not of glory; a mass of dark forest, lit up by the sun, and embowering the scattered houses which constitute the town. The height on which the *Ville d'Hiver* stands is no more than a sand-hill, or rather a series of sand-hills, on which is set a labyrinth of villas of every size and every shape, all surrounded by their little gardens, and these all and everywhere surrounded by pines. Yet is it in very deed a city built upon sand. Up banks of sand, down hills of sand, through cuttings of sand, you go; and perched on the top of sand-banks, nestled at the bottom of sand-banks, looking into yawning gorges of sandy forest, those lovely villas stand. Some there are in unconnected rows; others all alone but in friendly proximity; facing every point of the compass, up high overlooking the sea, down deep buried among the pines, everywhere villas. There is no order, no stiff formality; in shape, size, and architecture, each differs from its neighbour; but the effect of the whole is a scene upon which the eye delights to rest.

In regard to the virtue that may exist in this little city of the pines, we uninitiated have but to look at the results. We do not think any one could spend a winter at Arcachon and become acquainted with those who are resident there, or who return to it year after year, without being forced to the conclusion that the results of a sojourn in Arcachon have often been wonderful. How those results have been brought about, is a question too profound to enter on. Sufficient for us that we see them. And it needs seeing to bring forth believing; for the climate of Arcachon is not what is usually called perfect. We have no certainty there of the sun beaming on us from morning to night. At Arcachon we cannot fix our picnics a week before the time and feel certain

that the day will be dry and cloudless. But it does not suit every one to be roasted; and it may be that the climate being more akin to our own than that in many of the more southern health-resorts, does not tell against its influence on the British constitution. We are not in this respect transported into foreign soil; we have not the hard dry heaven of brass above us, but an excellent share of clouds, which do not hesitate to discharge their watery elements at will. And there are calm, mild, sweet cloudy days when rain does not fall, which, though the sun in his glory is withheld, constitute one of the charms of the place. In this respect it will be seen how much Arcachon differs in climate from so many of its brighter southern compeers, where the very strength of the sun makes certain peculiarly constituted folks feel a chill in removing from his presence. At Arcachon the rays of the sun seem to permeate all through and beneath the pines, there to be retained and linger when Sol himself withdraws. The absence of wind is another characteristic of the forest. Tempests may roar without, Atlantic billows may be heard in the distance, and even the little Bassin may rise suddenly in treacherous little storms; but the peace of the forest is seldom disturbed.

But it is its spring-time which is the peculiar glory and beauty of Arcachon; for then the pines redouble their healing powers. Then, too, are the little tin cups or earthenware pots hung up below the newly cut slit in the trunk, to receive its resinous outpourings; and the mass of blossoms shakes over everything its yellow powder. This powder is a peculiar feature: let the least wind stir in the forest, and it descends in clouds. It enters the open window; it covers the clothing; it floats down to the *Ville de Mer*; and covers the very sea. If it is true that a healing virtue resides in pine-trees, that virtue must certainly be had in perfection at Arcachon.

With regard to the manner of life at Arcachon: there are several *pensions* well reputed for kindness and consideration to the invalid; but the usual drawbacks to a boarding-house cannot be surmounted; and to the confirmed invalid a comfortable house, with the home hours and the home ways, must ever be the most desirable mode of life, when it can be attained. There are many excellent houses to be had, well furnished and replete with comfort, so that, to those of easy means, we do not think there should be much difficulty in the choice of an abode. Still, precautions need to be taken. The situations differ. A breath of the sea-air may be desirable for some, whose abode may therefore be chosen among the heights overlooking the sea; while it is perhaps altogether undesirable for others, who must accordingly retire to the bottom of some protecting slope. To those of more limited means, the choice of a temporary home becomes more difficult, as small comfortable villas fit for winter habitations are not very numerous. But the number of houses of all sizes is increasing rapidly, so that this want will probably soon be supplied. We think the houses in several ways superior to what can be rented at home for the same money.

The commissariat of Arcachon is in nearly every respect ample. As in all French towns, groceries and English luxuries are dear; and so are vegetables, which have all to be brought from Bor-

deaux, but are generally very good. Fowls are cheaper than at home, especially turkeys. The beef is good, the veal equally so and abundant, and the Pyrenean mutton it would be difficult to excel. There are many kinds of fish, amongst which we may mention soles. Oysters are to be had at half a franc the dozen, and are greatly relished, though not in the state of richness they attain to after transportation and a few months' feeding on the fat things of the Thames.

Fuel is an item of expenditure which many find unexpectedly dear. Abundance of it is a necessity, and therefore must be procured at any price; but there are ways and means here which it is well to consider. Many have the idea that no heat can come from the low French fireplaces we are so accustomed to in our health-resorts. It does not come out very willingly certainly, or at the moment of kindling; but dry wood and an *unstinted hand* will make a warm fire in spite of adverse circumstances. Coals from Bordeaux were our resource, a few families joining in taking a truck-load; and a couple of little grates, with a few fire-bricks round them, formed no great additional outlay.

The resources of Arcachon in the way of recreation and amusement, if not numerous, are at least good. Who could think it otherwise when we mention boating and riding as the principal? In the winter-time, riding is the great resource. Horse-hire is about half the home-price, and the paths through the forest are numerous. During our stay, mounted paper-hunts and similar innocent amusements were got up for the young people, while the older and weaker part of the community went to see the start. In spring, boating becomes perhaps the most popular recreation; and a tour through the oyster-beds is a thing to do in Arcachon.

Arcachon has one great advantage for the invalid, that it is easy of access. The long weary railway journey, and the trying stoppages incidental to foreign travelling, need not be encountered. A couple of days' sail from Liverpool in one of the fine 'Pacific' steamers takes us almost to our desired haven. And Arcachon once reached, we need be in no hurry to leave it. There, we are not turned adrift either by burning sun or melting snow, and forced again to become wanderers at the very season of the year which is often fraught with such danger to the invalid. For when April sheds her influence around, and the pines are pouring out their resinous virtues, if we find the forest air oppressive, we have but to bundle up our few belongings and move a mile or so down to the refreshing breezes of the *Plage*. There we have the sea on one side, with its sandy beach and all its life of boats and bustle, and oyster-women in their picturesque costume. On the other, the rows of chestnuts in their pyramids of pink, and the little town all astir with the Easter-holiday-making Bordelais, afford a change which, when evening comes, makes us sleep the sleep of the just.

In regard to the medical resources of Arcachon, an English doctor has been a winter resident there for a good many years. There are also several French doctors in the place, one in particular thought good at diagnosing all lung diseases, and who is frequently called in as consulting physician.

The Ville d'Hiver of Arcachon is rapidly in-

creasing in size. It is about twelve or fourteen years since a remarkable cure, attributable only to the pines and to no exterior comforts, brought the locality into notice; and Dr Hudson of Dublin was the first to send his patients to it. His example is now being followed by other physicians both in England and Scotland; and since the Franco-Prussian war, it is also becoming popular with the Parisians. As it increases in size, changes may come over it, and improvements be made in supplying what is found wanting; and those who now complain of its dullness may find more gaieties to distract their winter evenings. But gaieties are not conducive to cures, nor will they compensate in the eyes of many an invalid for the kindly sympathetic feeling which is at present so strong in the little community.

It is not for us to enter into the question what may or may not be the fitting place for those threatened with that sad disease which makes migration from our raw and foggy atmosphere so desirable at the approach of winter or spring. The effects of climate and atmosphere, and the constitutions and symptoms to be considered, are so varied, that skill to the utmost is needed in making the choice.

Most fervently do we wish that those who fly either to sunny shores or Alpine heights may find all their hopes realised; but for a spring resort, even if not thought of for all the winter, they might do worse than try the effects of the sweet pine-forest of Arcachon.

#### DESTRUCTION OF BIRDS OF PREY.

THE following remarks upon the systematic slaughter of hawks and other birds of prey—communicated by Mr Hugh Turner of Ipswich—appeared in *Land and Water*, a journal which has repeatedly advocated the cause of our persecuted raptorial birds. Being so consistent with our own views on this important subject, we do not hesitate to quote the paragraph in full. It is as follows:

The great destruction of the noblest species of British birds, the raptorial (birds of prey), which is taking place, and threatens in course of time, if nothing is done to prevent it, to exterminate them in England, is a matter to be deplored not only by ornithologists but by the community at large. Nature has provided spheres of usefulness for all her children; each has its appointed work to do, and if we destroy one, many must suffer the consequences. Yet this is what is being done in the case of our native hawks. That evil to the land, and one of the many burdens the farmer has to bear, the gamekeeper, one of the most disturbing elements in the relationship of landlord and tenant, and the author of the many abuses relating to the game-laws, indiscriminately destroys all bird-life save game, and it is to him we owe in great measure the gradual extinction with us of our native hawks. The gamekeeper in his crass ignorance believes that hawks in gaining their legitimate living prefer game to other food, as though they knew of the arbitrary distinction made only by the law of man; and this is his sole reason for destroying them, because, perchance, they may kill a few of his young pheasants and partridges, which he is rearing only to be slaughtered by the degenerating battue system.

Mr F. W. Dealy, writing in *Science Gossip* for

November last, in an article on the Sparrow-hawk, gives the following curious calculation: 'Suppose there is one pair of sparrow-hawks to every twenty square miles of the British Isles—which is a very moderate calculation, far below the number—there would then be twelve thousand one hundred and fifty birds. Again, suppose each of these to consume three birds—sparrows, we will say—per day, they would destroy upwards of thirteen million per year. What a holocaust offered up at the shrine of agriculture, and yet it is rejected.'

The Rev. F. O. Morris, in his well-known work on British Birds, speaking of the kestrel, another of our commonest, or rather least rare, hawks, says: 'It does infinitely more good than harm, if indeed it does any harm at all; and its stolid destruction by gamekeepers and others is much to be lamented, and should be deprecated by all who are able to interfere for the preservation of a bird which is an ornament to the country.'

It is a great pity that the raptorial were not included in the Wild Birds Protection Act, for it is in the breeding season, when the hawks resort to the woods, that their systematic and senseless slaughter by gamekeepers takes place.

In the winter, birds of prey leave the woods for more open country, and at this season of the year may be seen hovering over farm premises and corn-stacks in search of their food in the shape of rats, mice, sparrows, &c.; thereby ridding the farmer of those tiresome pests, which undermine his buildings and destroy hundreds of coombs of corn annually, besides doing other mischief; yet here again they are thoughtlessly shot at by any and every one carrying a gun. Can the increase of vermin in farm homesteads be wondered at when the very means Nature has given to remedy the evil is being wantonly destroyed?

As an instance of the war waged against our native hawks, I may mention that during last month four rough-legged buzzards—a large and, with us, rare species of hawk—were killed in the neighbourhood of this town; two of them had been shot and one trapped by gamekeepers. I would ask all lovers of Nature to try their utmost to prevent this wholesale destruction of our native raptorial, or they will awaken when too late to the fact of the loss of many of the most beautiful and useful of our feathered friends.

## THE MONTH.

### SCIENCE AND ARTS.

At the first meeting of the Institution of Civil Engineers in the present year, Mr W. H. Barlow, the President, in the course of an address, gave a summary of the progress of engineering since 1828, the year in which the Institution obtained its royal charter. Then there were a few tramways for the transport of coal in the mining districts, and a railway from Stockton to Darlington. In 1830 the railway from Liverpool to Manchester was opened. Now, the railways of the world measure more than one hundred and sixty thousand miles, in which the invested capital amounts to more than three thousand two hundred millions sterling. And considering that the greater part of the world is still unprovided with railways, the civil engineers look forward to a

very long period of active work in railway construction. Not less remarkable is the increase of steam-navigation; but with the number of steam-vessels there has been an increase of wrecks. These disasters may be to a large extent obviated by the improvement of ports and construction of harbours of refuge on both sides of the Channel. So much thought, scientific knowledge, and unremitting perseverance have been bestowed on perfecting marine engines and the build and endurance of ships, that the losses by wreck appear doubly deplorable.

The telegraph was then mentioned. In its present form it had no existence in 1828. In 1875, the total length of wire in operation was estimated at four hundred thousand miles. Lines have since been extended to the Cape of Good Hope and Zanzibar, and two cables laid between France and America. By means of the 'relay' (an instrument for calling a local battery into play, and thus increasing the electrical current), messages can be sent to distances formerly regarded as impossible. Calcutta and London, seven thousand miles apart, have been frequently put into direct communication. The prospect of the extension of telegraphs is not less encouraging than that of railways.

Another instance is found in the enormous growth of the use and application of gas. The sum of the investments in gas-works throughout the kingdom now amounts to forty million pounds, of which twelve million pounds represent the capital of the London gas companies. In 1878 the length of gas-mains in the metropolis was two thousand five hundred miles; the street lamps numbered fifty-eight thousand; the quantity of gas manufactured was seventeen thousand five hundred million cubic feet, and the residual matters produced in the manufacture were worth seven hundred and forty-five thousand pounds.

The telephone, Sir Joseph Whitworth's process for compressing instead of hammering steel, general improvements in the manufacture of iron and steel, and bridges and tunnels were mentioned as illustrative examples of the advantage derived from a better knowledge of physical science. Mr Barlow will find many to agree with him where he says: 'Obviously it is most essential that engineers should be acquainted with the principles which lie at the foundation of mechanical science, and with the nature and properties of the materials employed in works.' It remains for the engineers to avail themselves of the abundant means which now exist for the study of applied science; and the more they study materials, especially iron, and find out their limit of endurance, the better for all concerned.

It has been shewn that the rise and fall of the tides all around our coasts might be made to work machinery to compress air, and that this compressed air could be applied to vehicles of all kinds, private as well as public, to do the work of horses. In New York, a tramway system is already worked upon this principle. Reservoirs of compressed air are situated at certain street-stations where the cars are charged. They can then run for two miles or more before the air-supply becomes exhausted. It is also suggested that

compressed air might be laid on like gas, for the performance of domestic work.

Water-power for household purposes has been brought into use at Zurich. Firewood, for example, is to be sawn into convenient lengths for burning. A small sawing-machine on wheels is drawn by two men to the front of a house. They connect it by a flexible tube with the nearest hydrant; the water flows to the machine; the saw dances, and cuts up the wood with surprising rapidity. The quantity of water used is shewn by an indicator affixed to the sawing-machine. A portable turbine has also been invented, and employed in many places in the city, in driving a Gramme machine for the production of electric light. Water is sold very cheap in Zurich; but there are perhaps other towns in which this, so to call it, domestic water-power could be advantageously introduced. A turbine of American origin, about four inches in diameter, has for some time been sold in London. Its office is to work a sewing-machine. An india-rubber tube is attached to the ordinary water-supply—a similar tube acting as waste-pipe to the nearest sink.

A French captain at Oran, Algiers, has invented a hydraulic apparatus which, by dilating and contracting itself under water, produces an up-and-down motion which might be utilised for mechanical operations.—A hat-maker at Paris claims to have invented an aspiring or exhausting cloth, which obviates the inconveniences occasioned by perspiration.

Dr Schwendler, the electrician-general of India, as he may be called, has shewn that the cumbersome galvanic batteries which now produce the currents used by telegraphers for messages and signals may be done away with, and advantageously replaced by a current from a dynamo-electric machine. A machine of this kind, as is pretty well known, converts mechanical power directly into magnetism and electricity. The current thus produced can be employed in various ways: as light, and as a mechanical helper in domestic and official work. It can be set to swing punkahs, raise lifts, ring bells, drive a wheel, impel currents of air, and to other useful employments; and at night it will light up a telegraph office, a railway station, or a street. While the main current is thus busily employed, it may be tapped, so to speak, and weak currents drawn off for telegraphic purposes. Experiments tried at the government telegraph-works Alipore, India, proved completely successful, for messages were sent by the weak current to Agra, eight hundred and fifty miles distant, without any diminution of the light by which the works were illuminated. Not less successful were experiments made in the office at Calcutta, where fourteen telegraph lines terminate. Messages were sent along each of these lines at the same time, and not more than 5·0 per cent. of the main current was required. The employment of a magneto machine in lieu of a battery for telegraphic purposes, is of itself by no means new, for the ABC Telegraph of Wheatstone, so common on private lines, has always been worked by this means. But we may infer that dynamo-electric machines, capable of multifarious purposes, will some day be more generally employed.

Professors Houston and Thomson of the Central High School, Philadelphia, have devised a way of

storing up electricity in convenient receptacles for scientific purposes or ordinary work. They make use of a cell or suitable vessel containing a saturated solution of zinc sulphate in which are two copper-plates connected by a wire. A current from a dynamo-electric machine is then passed through the cell from the lower to the upper plate, and is continued until metallic zinc in considerable quantity is deposited on the upper plate, and a dense solution of copper sulphate overlies the under plate. The charge is then complete, and may be applied as required. The cell may be covered or sealed, to prevent evaporation; and since no addition of new material is needed, a restoration to an active condition is at any time possible.

As the Professors remark: 'The most obvious application of a storage battery furnishing a constant and lasting current, is to replace the ordinary telegraphic batteries; the objections to the direct use of the dynamo-electric machine being mainly the necessity for continually sustaining the driving-power and preventing variations or intermissions therein, to adapt the current generated to the work to be done; and to sustain a uniform electromotive force in said current. By the use of a storage battery, the dynamo-electric machine may be run at suitable intervals to produce and maintain the charge.' Storage batteries, as they point out, could be made use of in lighthouses, to work alarm signals, to drive small machines, and for many other obvious purposes.

The long-voiced question as to the cause of the unfortunate accident to the *Thunderer* gun has at length been definitely set at rest. The committee of inquiry reported that the cause of the gun bursting was, that it had inadvertently received a double charge both of shot and powder. This theory was called in question by many, and more particularly by Colonel Palliser, who instituted a series of trials upon a smaller gun, which, in result, certainly went to uphold his views. The sister-gun to that which burst has, however, now been put through a similar series of experiments—the last of which consisted in the ignition of a double charge, which shattered the gun to pieces. Although this experiment has cost a large sum, it has restored confidence in our big guns, for it shews that they will only give way under circumstances which should never be possible.

A portion of the history and results of the *Voyage of H.M.S. Challenger*, containing zoological descriptions with plates, is published. The whole work will comprise fourteen or fifteen quarto volumes, presenting a general account of the voyage with charts and landscapes, the magnetical and meteorological observations, the nature of recent deposits at the sea-bottom, their bearings on geology and petrology, on the general chemical and physical results of the expedition, besides full details of zoology and natural history. This is an important scheme, and we may assume that the work, when complete, will be a not less important contribution to science.

The publication of an important book has been commenced in Melbourne: a description with coloured plates of the various eucalyptus trees of Australia. As a work of reference for tree-cultivators, this work will be eminently useful in all countries.

From the Geological and Natural History Survey

of Canada, which takes a wide sweep into surrounding regions, we learn that on the east coast of Hudson's Bay the sea-level is falling at a comparatively rapid rate, from five to ten feet in a century. Certain bays and mouths of rivers, once resorted to by ships, cannot now be approached; and that which was formerly covered by the tide, is now several feet out of the water.

Lord Walsingham has placed at the disposal of the Entomological Society two prizes of fifty pounds each: one for the best and most complete life-history of the parasite supposed to produce the so-called 'gapes' in poultry; and one for a similar history of the parasite supposed to produce the grouse disease. The inquiry cannot be termed strictly entomological, but good may come from it nevertheless.

In a communication read to the Geological Society by Dr Wallich, interesting particulars were given of the origin, mode of formation, and cause of the stratification of the chalk flints, following them from the period when the chief portion of the silica of which they are composed was eliminated from the ocean water by the deep-sea sponges, to the period in which they became consolidated. The silica is derived mainly from the sponge-beds and fields which exist in immense profusion over the areas occupied by the Globigerine or calcareous ooze. Sponges are the only really important contributors to the flint formation that live and die on the sea-bed; and flints are just as much an organic product as the chalk itself. Dr Wallich is of opinion that the substance to which the name *Bathybius* has been given is in reality sponge protoplasm; and that no valid lithological distinction exists between the chalk and the calcareous mud of the Atlantic, and that therefore the calcareous mud may be, and in all probability is 'a continuation of the chalk-formation.'

It is frequently said that uncivilised people have an advantage over the civilised in their exemption from unsoundness of teeth. Among the civilised, the 'wisdom-teeth' are very apt to become impaired, and these with other defects are looked on as results of civilisation. But Professor Flower, of the Royal College of Surgeons, in a discourse to the Odontological Society on abnormal dentition, accompanied by examples from all parts of the world, shewed that 'defective condition of the wisdom-teeth is no monopoly of the most highly civilised races, but may also be found among the most abject and degraded of the whole human species.' In the Eskimos and other Mongol races, the instances of entire absence of wisdom-teeth are numerous.

'Phthisis,' says Dr W. Thomson of Melbourne, 'continues to be the most fatal disease in Victoria. Deaths from phthisis (consumption) in 1877 numbered one thousand and eighty-eight, which is a larger number than was ever previously recorded in any year.' He has visited many parts of the world, has resided some years in Australia, and has set forth his views upon the malady, supported by cases observed in actual practice, in a book entitled *On Phthisis and the supposed Influence of Climate, being an Analysis of Statistics of Consumption in this part of Australia*. By medical practitioners and persons intending to visit Australia in pursuit of health, the book may be read with advantage.

In a paper read before the National Academy of Sciences at Washington, Mr Le Conte states his views on the 'Glycogenic Function of the Liver,' and the way in which it disposes of waste. 'It seems to me,' he says, 'that physiologists do not even yet sufficiently appreciate the function of the blood as a reservoir. The blood must be regarded as a reservoir not only for oxygen and carbonic acid, but also and still more for food, for fuel, and for waste. The tissue-food of to-day is not used for building to-day; but the blood is drawn upon for materials for this purpose, and resupplies itself from albuminoid food. The amyloid food of to-day is not burned to-day; but the blood is drawn upon for fuel, and resupplies itself from the liver; while the liver in its turn resupplies itself from the amyloid food. So also waste tissue of to-day is not mainly burned and eliminated to-day; but the blood is again drawn upon for fuel from this source, and resupplies itself from the liver, and the liver from the tissues.'

According to Mr Le Conte, the three sources of vital force and animal heat are (1) the combustion of the whole of the amyloids; (2) the combustion of the combustible portion of albuminoid food excess; and (3) the combustion of the combustible portion of waste tissues. Therefore, he observes, the function of the liver is to prepare all the fuel of the body, and this fuel is only liver-sugar.

#### LINES ON PORTOBELLO.

WRITTEN AFTER A VISIT OF TWO MONTHS IN 1877.

The lines are a reply to the old song, beginning 'By Pinkie House oft let me walk, to muse on Nelly's charms.' For a suitable rhyme to 'Nelly,' the name 'Portobello' is given as 'Portobelli,' such being the ordinary pronunciation by certain classes in Edinburgh.

Though Pinkie walks are wondrous fine  
For musing on your Nelly,  
I much prefer for change of air,  
The walks in 'Portobelli.'

I'll ne'er repine for charms divine  
You find in lovely Nelly;  
The charms that last, are to my taste  
The charms of 'Portobelli.'

The yellow sands, with mirthful bands,  
And nought to e'er repel ye;  
That beach so rare, beyond compare,  
Which fringes 'Portobelli.'

A beauteous scene, the air serene,  
Ah! what can e'er excel ye!  
The sum of health, above all wealth,  
You'll find in 'Portobelli.'

A choice retreat, with dwellings meet—  
Fit home for any Nelly;  
They're to be blest who take their rest  
In pleasant 'Portobelli.'

Where'er I roam and far from home,  
I'll not forget to tell aye,  
Of happy summer days I spent  
With friends in 'Portobelli.'

## A LIFE'S ATONEMENT.

By D. CHRISTIE MURRAY.

CHAPTER I.—AUTOBIOGRAPHY.

*The day was wintry and the sunlight ghostly when a wintry and a ghost-like apparition came upon me.*

THE first thing I remember is a narrow little patch of garden, surrounded by high walls of brick, and enlaid by a paved brickyard. The day was wintry and the sunlight ghostly when Memory presented me with her first photograph. I am able to recall the time quite clearly, and nothing seems clearer than the complete absence of emotion which followed the statement that I was an orphan. Sally, the one grim but faithful domestic of our fallen house, brought me the news with tears. I received it with a childish stoicism. Playing dully an hour afterwards in that chill winter sunlight about the bricked yard and the frowsy and ill-kept garden, I was seized and violently caressed by our old servant. There Memory's negative suddenly comes to an edge, and the time that followed has, for a space, no pictures for me. Just that little snatch of light comes in between two blanks. I find by reference to dates that the first blank had lasted just three years. The next lasted a month only. Poor little touch of childish memory!—a sterile halting-place between two deserts of shade and night.

I did not know until afterwards how utterly alone and desolate I was, and how narrow a chance I had of finding a home in the neighbouring union workhouse. I am on all hands assured that my father's dealings with the world had not been honourable. I have been told that he broke my mother's heart; that he squandered his patrimony; that he had been guilty of mean devices to escape his creditors. But I know these things to be untrue, although it is of little use to defend him now.

I sit here in my chambers, with my feet at the bars and my pipe between my teeth, and bid the footlights spring up, and set the orchestra

tuning their instruments. The curtain rises. The first picture appears, and—to what sad and sweet music—the panorama glides along!

I have heard so much from that good and faithful servitor, that the month I have spoken of has lost its blank unreality, and grown to be as real as the rest. Sally Troman took me—the only thing she took—from the house which Death and Debt had made untenable, and carried me to her mother's cottage, a queer little establishment, with a set of green wooden palings round it, and with two little patches of garden in front, each about the size of a hearth-rug. The tiny garden was filled with two odoriferous growths of shrub. What their scientific name might be I cannot say, but they were always spoken of as 'old man' and 'old woman.' The sexes dwelt apart, and were held sternly separate by a small quarried footway, flanked on either side by a double row of oyster-shells. The house itself, partly by reason of its quaint architecture, and partly by reason of the fact that, from earth to chimney-top, it was covered with oyster-shells, had always, to my childish eye, the aspect of an extinct and helpless mollusc. The molluscous tribes seemed richly represented close at hand. Oyster-shells, of gigantic proportions, were piled about the ragged fields, or lay strewn upon the grimy mounds of that desolate region. I recognise them now as furnace-refuse; but as I wandered about the place in those days, though the right royal prince Gargantua had not then been introduced to me, I often pictured a huge figure, standing before some elysian and mountainous oyster-stall, wielding a vinegar bottle and a pepper-caster of the size of the parish church-tower, emptying some of those enormous shells of

their esculent inhabitants, and paying for his alfresco feast one Brobdingnagian penny.

Walking up the quarried footway, Mrs Troman's visitor found progress barred by a sort of grated wooden portcullis. This was intended to keep me from straying beyond the household ken; and I was so far like a baron of the middle ages, that the passer-by might guess by the position of the portcullis whether I was at home or abroad. Having passed this barrier, you had three steps to go down. Those steps and the floor beyond them were of red quarries, and clean as scrubbing could make them. The kitchen had a low but ample fire-grate; a fender of bent steel, polished till the flat round plate on its top looked in the firelight like a rising wintry sun; a sturdy unclad deal table with red legs; a nondescript couch covered with chintz, cold, crackly, shining, and comfortless; a mirror, hint of far-off gentility somewhere, hanging on the wall between the table and the couch; and an old clock, which, being too tall for the apartment, was accommodated with a well to stand in. The mirror was a small affair, bound by miniature columns of fluted gold with florid ornamentation on the pediments, and the glass was seamed and scratched and blotted until it looked like a page from some faded atlas. The tall old clock regarded me as an intruder from the first moment of my arrival, bullying me solemnly, even in Sally's presence, and frightening me with monitory tickings when I sat alone. Its face represented one of the heavenly bodies—the moon, I fancy—a foolish, staring, futile sort of countenance, which always seemed to me like a dead mask with a living face behind it, the living face to which that voice belonged which ticked the seconds so remorselessly.

The country round about was very dreary. The normal colour of the sky was a dull and darkish slate, with an occasional touch of blue in it, by way of a summer wonder. The district in its general outlines was as flat as a scene in Holland; but it had about it here and there mountains of slag and cinder and mine-refuse, and was excavated here and there into clay mines, and was in all directions harried and broken up as if by a small and fretful volcanic agency. An agency not powerful enough for any great upheaval, but with just sufficient strength to fret and worry the surface of the patient earth in this way. Not an extinct volcanic agency by any means; for there was always on the edge of the dull sky a lurid gleam; and always you might hear a shuddering boom which shook the air; and always, move where you might, you were engirt by smoke and flame. The heavy skeleton frames at the heads of coal-pits were thick on the landscape, waiting, as I used to fancy, like huge spiders, for the flies which came up from below, drawn cunningly and swiftly by a gliding line into their ugly grasp, to be dropped again empty.

This was my childish environment. At the age of four or thereabouts—Sally's fund of scholarship being by that time exhausted—I was sent to school. The seminary I attended was presided over by a very dirty old woman, who smoked a short clay pipe. What sort of scholastic regimen I had, it is scarcely worth while to say. Reading and writing, says Degberry, come by nature; and less by reason of any assistance than by force of nature I learned to read. I spent my infrequent

pence in the purchase of literary stores. Not far from Sally's house was a small shop with a single bleared and dirty window. This window was covered at night-time by a shutter which hung downward, having its hinges on the upper casement, so that during the day it was necessary to prop it up with sticks, and thus convert it into a kind of roof. Under that frail and brief shelter I have often stood in rainy weather to spell through one large-typed page of Jack the Giant-Killer, or the legend of Simple Simon. Stories of Bluebeard and Blueskin—whom I regarded as a kind of literary twins—were there also; and the library included further the narratives of the lives of Sixteen-stringed Jack and Three-fingered Jack, another pair of twins. They were all illustrated by outrageous cuts, loosely slopped over with water colours in such wise that the crimson hue of Bluebeard's turban incarnadined the clouds, and his yellow boots overflowed the foreground.

In the way of literature, Sally's house was not altogether unprovided. The *Pilgrim's Progress* and the *Holy War*, a mutilated copy of the *Arabian Nights*, a Family Bible—including the Apocrypha and several incredible steel engravings—and a fat volume containing *Zadig*, the *Devil on Two Sticks*, *Roderick Random*, and *Gil Blas*, made up the library. How these books had been got together, or to whom they had belonged, I never knew; but they were to me such a source of infinite enchantment as I can never cease to be affectionately grateful for. It is not the least among the joys they brought that they made that dismal Black Country lovely in my eyes, filling it—as they did—with all manner of sweet associations, which have lasted until now. For even now, *Gil Blas*, when I rejoin him in his adventures, parts from his uncle at the corner of Yew Tree Lane; and Benjamin, whenever I renew acquaintance with him, is seized, with the golden cnp in his sack, in front of Pleasant Row Cottages.

The day was wintry and the sunlight ghost-like when a wintry and a ghost-like apparition came upon me. I was playing alone. I always did play alone; for Sally had a mighty idea of my gentility, and sternly forbade all avoidable contact with aboriginal infancy. I was naturally a little shy, and more than a little given to the building of wonderful castles. I preferred to exercise my architectural art alone; and had wandered away over the grimy pit-mound fronting on Sally's house, along the slimy canal which ran behind that Apennine, over the little Dutch-looking bridge, and into a certain mangy meadow, which then represented to me the very heart of Nature's solitude. At the end of this meadow was a delicious terror—a yawning precipice, which seemed to me of Alpine height and grandeur, although more recent visits assure me that this dreadful chasm is as mere a clay-pit as any in the county. Beyond it the earth burned slowly always, and the place was Bunyan's Valley of the Shadow of Death in dull weather, and on sunshiny days it was Sindbad's Valley of Diamonds. It was surrounded by a rickety wooden fence; and one of my delights was to hang over a broken stump, and—blinding myself from all knowledge of earth and sky—to give myself the fearsome pleasure of falling in fancy over that sheer precipice. This got to be a regular part of my nightly dreams at last, and I

did what I chose with the fancy, asleep or awake. I fell swiftly, and, suspending myself half-way, winged a leisurely spiral way upwards. I went head foremost or feet foremost, like a stone, and came without a shock to the bottom. Without ever having heard of Mr Daniel Home or Mrs Guppy, I was the equal of either, so far as voluntary levitation went. On the particular day I speak of I had got to my favourite stump, and after a lengthier waiting than usual, had just begun my delicious unwholesome journey, when I was startled out of the fancy by a sound which very nearly startled me into the fact. The sound was that of a quick footstep. So near I was to being startled into the fact, that if the man whose approach had broken my dream had not taken me by the petticoats, I should infallibly have fallen over. I was so energetically plucked from danger that I was thrown a yard or two into the meadow; and having had just time to be dreadfully frightened, and seeing that it was a stranger who had both frightened and rescued me, the proper thing for me at the moment appeared to be to cry. The man stood and looked at me, and frightened me still more. He was a young man, and evidently belonged to a very superior class to that I commonly mixed with or commonly saw. He had rings on his fingers, for instance, and wore a gold chain. He was well dressed, or rather his clothes were made of good material and looked new; but they were torn and splashed from head to foot. On his left side he had a streak of dry white mud from shoulder to knee. His face was handsome, but haggard beyond all description, and his lips were drawn back from the teeth in a very remarkable way. I have seen the same look on a dead face since then; but I had never seen it before, and it frightened me horribly. His hair was very wildly disarranged, and there was a dark blur of unshaven beard on cheek and chin. He stood and stared at me after having pitched me into the meadow; and when I had once or twice stolen a look at him, I grew so desperately frightened that I did not even dare to cry.

'What were you doing there?' he asked me.

I made no answer; and he muttered to himself: 'That's an act of Providence, anyway. I startled him into it, and I drag him out of it. Couldn't Providence have done as much for me, I wonder?'

There he laughed, and sat down on the grass at a little distance.

'Who are you?' he asked suddenly. 'What's your name?'

I managed somehow to say: 'Johnny Campbell.'

'Got any friends, Johnny Campbell?' he asked me.

I responded: 'Yes sir,' with inward quaking.

'Then go home,' he said, 'and tell them not to let you wander about in this wild way.'

'Yes sir,' I answered again, still in fear of his lips and his eyes.

He did not move, and I was too frightened to do so.

'What's to-day?' he asked me.

I told him 'Thursday.'

Then he mused for a while, and plucked a few blades of grass, and ate them slowly.

'How old are you?' he demanded, after this pause.

'Nearly seven,' I told him.

'Are you a sharp lad?' he questioned. 'Do you know how far it is from here to London?'

I made shift to tell him there was a milestone not far off which said it was a hundred and sixteen miles; to which he responded: 'Nonsense.'

Then he ate another blade or two of grass, and said to himself, though he looked hard at me the while: 'Let me see. Five days. And a life taken, and a life put in danger, and a life saved.'

He rose then, and after a glance over the broken railings, he looked back at me, and laughed, and said: 'There are better chances than that in the world, even yet, Johnny Campbell.'

With that he went away. What tick Memory plays me, I can guess; but he seemed to me rather to vanish into air than to disappear in any common fashion. I sat and cried, and shivered for a little while, and then went home, to find that day made doubly memorable.

When I reached Sally's house I was still crying. The man whom I had just seen had thrown me into a spot in the mangy meadow where the grass was covered with wet clay. I was not at all hurt; but I had covered my face and my hands with tear-moistened soil, and came as a perfect shock on Sally when I entered the kitchen.

'Oh, you dreadful, tiresome, dirty child!' cried Sally, making a dart at me and recoiling. 'O dear, dear! It's them nasty lads, I know. There; take off your pinner, and don't stand staring at me like a blue dog in a dark entry.' Sally's similes were all of an extravagantly unlikely sort, and this of the blue dog in the dark entry was the one in especial use in all cases of emergency or surprise. 'Come an' be washed. Them dreadful lads! I'd like to make an end o' the lot of 'em, that I would. You've been playin' with that there Johnny Wardle, I know.'

There Sally made a sudden courtesy. 'I beg your pardon, ma'am. I didn't see as anybody was here. What might you be pleased to want, ma'am? Will you take a seat, ma'am?'

I turned round, and seeing that a stranger had entered the house, took refuge behind the clock. The stranger was an elderly lady, dressed in deep mourning. She was very set and stately in bearing, and very set and stately in speech; but her face and voice were inviting. I have since then lost my childish faculty for reading faces; but in all my childish experiences, I was never once deceived in that regard, and certainly in them all had never lighted on a face which attracted me so much. The lady, in spite of Sally's invitation, remained standing.

'Your name,' she asked, 'is Troman?'

'Yes ma'am,' returned Sally. 'At your service, ma'am.'

'You lived for some years, I think, with Mrs John Campbell of Heath House?'

'Yes ma'am,' said Sally. 'Pore dear lady. I went to live with her when her got married, and I lived with her till her died, and see her die.'

'Yes; I have heard of you and of your faithful service'—Sally courtesied—'and of your kindness to her child.' Sally courtesied again. 'Is that the child?'

'I'm regular ashamed to shew him, ma'am,' said Sally, bringing me from behind the clock; 'but I wanted the kitchen to do my ironin' in, and so I let him go out and play himself, an' them nasty

lads about here has been and rolled him again, I suppose.'

By that phrase Sally signified the method by which certain of the young democrats of that region revenged themselves upon me for her proclamation of my unfitness to associate with 'the likes o' them.' It was their occasional practice to seize me when I strayed away from home, and to roll me in any conveniently muddy spot, until I assumed the aspect of an earthen image.

'Will you oblige me,' said the lady, 'by washing him?'

'Certainly, ma'am; I was just agoing to do it,' Sally explained.

'So I saw,' responded the lady, and seated herself.

'Though, goodness gracious knows,' said Sally as she took me in hand, 'as he was sent out this blessed mornin' as neat as ever was new pin, ma'am.'

I was forthwith taken away and washed and brushed, and having been inducted into clean socks and a new pinafore, was brought back to the kitchen. Then the lady asked me to sit upon her knee, and I did so.

'I suppose,' she asked Sally, 'that you knew nothing of this young gentleman's relatives—of his parents' relatives, I mean?'

'No ma'am,' Sally answered. 'I didn't know as he had a soul in the world as ud own him.'

'I,' said the lady, 'am his aunt. My name is Campbell. Mr John Campbell—your old master, the child's father—was my husband's brother. I believe he has no nearer relative than myself, and I propose to take charge of him.'

I looked across at Sally then, and slipping from the lady's lap, ran to my old protectress. She took me up and put her firm red arms about me.

'No ma'am,' said Sally, in a sort of quiet desperation. 'I can't dream o' partin' from the child.'

'But you must see,' said the lady, 'that it cannot be for his advantage to live here.'

'It ud be cruel, ma'am,' said Sally with a gulp, 'to part me and the child.'

'It would be far more cruel to the child to leave him here; and I am his natural guardian.'

'Well ma'am,' said Sally, 'I've been his un-nat'ral guardian now for pretty nigh three year, ma'am. I should like to know, ma'am, why he ain't been sought after?' I took him out of his poor dead father's arms, I did, and brought him home along with me and reared him, and didn't get no nat'ral guardians coming to ask a word about him.'

'I was away from England when Mr Campbell died. Your question is a very natural one, and your conduct does you very great credit. You shall be well paid for what you have done.'

I was staring hard at the lady all this time, and I noticed that she blushed deeply a moment after she had said this. I think it was at Sally's start of wounded indignation.

'You'll have to prove these words, as you're his aunt, ma'am,' said Sally very quietly, and folding me tightly in her arms. 'But if you are his aunt, ma'am, I suppose I can't hinder you from taking him. But O ma'am,' cried Sally, gripping me still harder in her earnestness, 'treat him kind. He hasn't been used to no mother-in-lawrin'.' There Sally cried very heartily.

The lady answered; 'I hear an excellent account of you, and the Vicar's wife assures me that you are a good domestic. Are you willing to take service? I have no doubt that I can find a place for you in my brother's household.'

'Will the child be there?' asked Sally.

The lady inclined her head and answered: 'Yes.'

'Then O ma'am,' answered Sally, rising with me in her arms, 'then O ma'am, how glad and willin'!'

'When can you be ready to go?' her visitor asked.

'I can be ready a'most as soon as you like, ma'am,' said Sally, setting me down and wiping her eyes with her apron. 'When mother comes in, I can tell her as I've got a place, and pack and start a'most at once, ma'am.'

'Then,' said the lady, rising, 'be ready for me at ten o'clock to-morrow. You will want to buy some things for the child. Let them be handsome, but plain and good. You know how a gentleman's child should be dressed, I suppose?'

'O yes ma'am,' Sally answered. 'He's rather shabby now; but I've done my best with him.'

'I am very grateful to you for it,' replied her visitor; 'and when I spoke of paying you for your trouble, I did not wish you to think that I meant only by money. This will serve you for such purchases as you will find it necessary to make. Pack for him, if you please, only such things as will be fit for his use when he reaches home.'

With that the stately lady set a piece of thin and rustling paper on the table; and having kissed me, and said good-day to Sally, she went away. My devoted guardian followed her to the door and made a final obeisance, and then ran back into the kitchen and took me up in one confused armful and sat down with me on the nondescript couch. There she kissed and cried over me. I cried for company, until Sally set me down and exclaimed: 'Bless the child's heart alive! what's he got to cry for? I knowed as heaven ud never leave the little innocent to grow up in a place like this. Didn't I, Johnny?' And therewith she knelt down by me and renewed her tears.

#### PERFUMERY FARMING.

VISITING the south of France some time ago, we were much struck—especially in the neighbourhood of Cannes and on to Nice—by the number of magnificent flower-farms—we can call them nothing else—which we saw in every direction, and the odour of which was perceivable long before coming near them. In this charming region may be seen in all their profuse luxuriance, acres of violets, of mignonette, and of cassie, farmed in the literal sense of the word, and raised not for their beauty, nor for sale in the ordinary nursery-garden fashion, but for the purposes of the perfumer.

There are four methods of obtaining the perfume of plants and flowers in general use—first, by expression; second, by distillation; third, by maceration; and fourth, by what is termed enfleurage. The first of these, *expression*, is the simplest, and is only used where the plant or flower contains an abundant supply of volatile or essential oil—that is, the quality which contains the odour or perfume. The *outer* rind of the lemon, of the orange, and

the citron are treated in this way. The parts are put into a stout cloth bag, laid on a perforated plate under a screw-press, and the oil trickles through to vessels placed beneath. When it is all pressed out, the oil is left to stand for some time, to separate itself from the water that drained through with it. Then it is poured off, carefully strained, and is ready for use—not as a perfume, but in the making up of oils, pomades, and essences.

*Distillation*, the second method, is chiefly used for lavender, cloves, herbs, seeds, and the commoner flowers which do not lose their odour when brought in contact by heat. The process is a chemical one, by which the spirit of the flower is distilled by heat; only in France, perfumers apply fire directly to the still, while in England we distil by steam.

*Maceration*, the third method, is very much used. It is rather a peculiar process, and the last one would think of as a way of getting perfume out of flowers. A quantity of the finest purified beef-suet is placed with clarified lard in a scrupulously clean porcelain steam-pan. When the fat is thoroughly melted and quite free from impurities, the flowers to be *macerated* are thrown in, and allowed to remain from twelve to forty-eight hours. The liquid fat is then strained, fresh flowers added, and the process is repeated as often as is considered necessary—the result being pomatum. The pomatum obtained is known as six, twelve, eighteen, or twenty-four, according to the strength of its odour. Perfumed oils are obtained in the same manner, fine olive-oil being used instead of lard and suet.

The last and most important method is *enfleurage*, a way very little practised by English perfumers, as it is dainty, expensive, and troublesome. First of all, square shallow frames with glass bottoms are spread over with a thin layer of clarified fat, then strewed thickly with flowers, and allowed to remain for some time. The frames are piled one upon another, so that the flowers are in fact shut up in a glass box with a layer of fat between. When the fat has absorbed all the odour, the flowers are replaced by others till the pomatum is sufficiently strong. Coarse cotton cloths are saturated with the finest olive-oil, laid on wire-gauze frames, and strewed with flowers. They are then placed under a screw-press, and the perfumed oil wrung from them as by *expression*. The pomatums so obtained give their name to a variety of perfumes according to the flowers used, or the combination of different flowers to imitate others. For example, the orange flower macerated in pomade is known as orange-flower pomatum. This when chopped up very fine and put into rectified spirit makes extract of orange flower which can scarcely be distinguished from the original, and is one of the most valuable bases to the perfumer, passing with slight modifications for sweet pea, magnolia, and perfumes of that kind. The orange-tree gives three different and decided odours; and the majority of sweet-smelling flowers give two according to their mode of preparation. Orange flowers for distillation are largely grown at Nice; those grown about Cannes are chiefly used for pomatums.

Odours are extracted from different parts of plants and flowers—from the root, as in orris and vitivert; the stem, as in cedar, sandal, and rose-wood; the leaves, as thyme, mint, patchouli; the

blossom, as roses, violets, &c.; the seed, as the Tonquin bean, the caraway; the bark, as the cinnamon. But all the more delicate odours are chiefly derived from the corolla or blossom. After the orange—which enters in some shape or form very largely into the composition of countless essences, pomades, oils, and cosmetics—one of the most useful plants to the perfumer is cassie. It is to be found in most of the favourite handkerchief bouquets; but alone it is of too sickly-sweet an odour to be agreeable. It is extensively grown at Cannes, and combines well with orange-flower, rose, tuberose, and vanilla. Bergamot is another faithful ally of the perfumer. It is an essential oil, obtained by expression from the rind of a species of citron, and is to be found in the majority of essences, particularly in the celebrated *Ess Bouquet*. Of itself it is not a particularly pleasant odour; but combined with orris, musk, or other fixing scents, it is very fragrant. It is best kept in a cool dark place, in closely stoppered bottles, which applies to all perfumes except essence or extract of rose; so that when ladies keep their perfume-bottles on the toilet-table in sunlight and gaslight, or, as is sometimes the case, on the mantel-piece over a fire, they should not be surprised if they soon lose their delicate subtle odour; in fact, the purer and better the perfumes are, the more susceptible are they to the influences of light and heat.

It is a curious fact that some of our sweetest flowers are unavailable for the purposes of perfumery. Sweet-brier, for instance, and eglantine can only be imitated. No process has yet been discovered by which their delicate perfume can be extracted and preserved; but spirituous extracts of rose pomade, of flower of orange, neroli oil—also produced from the orange, and verbenal—when cunningly combined, very fairly imitate both. Lily of the valley—another useless flower to the perfumer, though of exquisite scent in itself—is marvellously imitated by a compound of vanilla, extract of tuberose, jasmine, and otto of almonds. Almost all lilies are found too powerful even for perfumery purposes, and are therefore little used, even in combination with other odours, for it has been found in many instances that they do not harmonise well with the ‘fixing and disguising’ scents in general use. It appears from Dr Piesse’s little book on perfumes that most of our very sweetest flowers are only successfully imitated, as wall-flower, clove pink, sweet pea. Magnolia is too expensive to be genuine. Myrtle is very rarely genuine. Real sweet pea there is none, and heliotrope and honeysuckle are cleverly made up. Tuberose, vanilla, orange flower, violet, rose, jasmine, and cassie, with orris and vitivert, musk, and ambergris in proper proportions and combinations, are the leading ingredients in most perfumes. Mignonette, sweet as it is in the garden, is almost useless by itself to the perfumer; and tuberose, one of the sweetest, if not the very sweetest flower that blooms, combined with jasmine makes the perfume called stephanotis. By *enfleurage* it gives a most delicious extract; but it needs to be fixed immediately by a less volatile scent, or it will immediately evaporate. Fixed by vanilla or some other enduring odour, it is one of the most charming and useful essences in the perfumer’s *répertoire*, and enters into the composition of almost all the favourite

handkerchief bouquets. Cassie, otto of almonds, tuberose, and orris, form two-thirds of the violet essence generally sold. The genuine essence of violets is only to be procured at special places and at exorbitant prices.

Of fixing or permanent scents, the principal are musk, vanilla, ambergris, orris, and vitivert. Orris is perhaps more used than any other, and enters largely into the composition of all popular dentifrices. From the odours already known, we may produce by proper combinations the scent of almost every flower that blows, except the jasmine. It is the one perfume that defies spurious imitation. It seems almost needless to say that otto of roses comes chiefly from the East. The rose-fields of Kizaulik in Roumelia and the sweet valleys of Cashmere give us the *attar gul* renowned over the whole world. But there is a very sweet otto of rose made from the beautiful Provence roses that grow to such perfection at Cannes and Grasse. The flower has a rather subtle odour, arising it is said from the bees carrying the pollen of the orange flowers to the rosebeds. The otto is obtained by maceration and *enfleurage*.

The whole south of Europe is what one might call the perfumer's happy farming-ground. Cannes and Nice are especially famous. There, on the mild sea-coast grows the delicate cassie that can scarcely bear a blast; at the foot of the mountains, the violets are sweeter than if grown in the sheltered valleys, where the orange, tuberose, and mignonette attain to such marvellous perfection. But flowers are grown for perfumery purposes in many other places. Nîmes is famous for its rosemary and thyme, Nice for its violets, Sicily for its lemons and bergamot, and England is famous for lavender and peppermint; the latter always commanding a high price in foreign markets, as it forms the general mouth-wash used on the continent. The lavender grown at Mitcham and Hitchin is about eight times the value of that grown in France and Italy; and for ordinary use there is no sweeter perfume than good lavender water.

Just one word on the use of perfumes; and it is *moderation*. Persons, places, and things are all the better and pleasanter for a little sweet essence; but see that it is a little. If some persons are too lavish in the use of their favourite bouquet, and turn what was meant for a refined pleasure into a vulgar nuisance, their extravagance is to be avoided rather than the perfume itself. That perfumery is an important business is attested by the fact that the duty alone on imported perfumes, and the spirit used for their home manufacture, amounts to the annual sum of nearly fifty thousand pounds.

## STUDIES FROM LIFE.

'ABNER.'

BEING anxious, some years ago, to gain an insight into the mode of treating lunatic prisoners, I proceeded with two friends to an asylum which I shall name Doujonville Castle, the place having been once a feudal stronghold.

Conducted by an obliging turnkey, I emerged from a small doorway in an immensely thick wall, and found myself looking down from a considerable height upon an open court-yard, in

which several figures were moving listlessly about. Three or four flights of stone steps connected the lobby on which I stood with the court-yard below. As I peered over the iron balustrade before descending, I noticed about half-way down the steps a singular object, which I took at first to be a huddled heap of old clothes. A second glance, however, shewed me that the thing, whatever it was, moved, and at last I made the object out to be a human being in the hideous yellowish-gray garb of the prison. The figure was on its hands and knees, apparently engaged in slowly and laboriously writing or drawing with a piece of slate on the stone steps. Noting my curious scrutiny, the turnkey volunteered information.

'That's one of the lunatics, sir,' he said. 'Abner, we call him. A harmless creature enough, except when his fit is on, and then he's about the worst we've got.'

'Does he often have such fits?'

'Well, about four or five times in the twelve-month, sir. We can always tell when they're comin' on by the change in his look and manner, and then we keep a sharp watch upon him.'

By this time we were descending the staircase, and had come alongside Abner; but he never raised his head or took the slightest notice of our presence until the turnkey touched him and said: 'Well, Abner, how is it with you to-day? Don't you see there's visitors come to pay you their compliments?'

A mild, clean-shaven, vacant face—an absolutely expressionless face, was lifted to us for a moment, and a pair of large gray eyes, without a ray of intelligence or interest in them, rested for a second upon each of us in turn. Then without a word or a sign to shew that he was conscious of anything except the familiar sound of the turnkey's voice, Abner turned mechanically to his occupation again, and became engrossed in his slow, laborious scribbling on the step.

'What is he doing?' I asked the turnkey after we had passed.

'Why sir, that's the way he occupies himself every day, except when his fit is on, and we have to lock him up. He writes his name, you see, and a date and some queer flourish of his own, upon every step from the bottom up to the top; and when he has finished, he wipes every step clean and begins afresh. He's been at it ever since he first came here, fifteen years ago.'

'Is he a criminal lunatic?'

'Yes sir; he's in for murder. Killed a little boy with a pitchfork; but the jury brought him in insane. He was a schoolmaster once, and a very clever one too, I've heard.'

I turned and looked back at Abner. There he was on his hands and knees scribbling methodically, perfectly unconscious of everything around him. And so the days and weeks and months had rolled over his head for fifteen years! What a death in life! I thought, and wondered whether any gleam of reason or flash of memory ever for a moment illumined the dark, blank chambers of his brain; or whether the world was always as completely a void to him as it was at that moment.

My reflections were abruptly broken by a yell so startling in its suddenness, so appalling in its savage rage, that for the instant I was paralysed

with terror. Instinctively I thought of Abner, and cast a hurried and fearful glance behind me at the subject of my reflections. But no! That yell could never have come from him; he was still absorbed in his eternal scrawl. I saw by the scared faces of my companions that they had shared my apprehensions. The turnkey alone was unmoved; with a quiet smile, as of one to whom such awful sounds were as familiar as the cock-crow to ourselves, he set our fears at rest.

'That's from the female lunatics' ward, sir. Black Kate's in her tantrums to-day, and they've had to cage her, I expect. She's an awful one, is Kate—tears the clothes from her body, and rampages about sometimes for a whole week together. She's a fury, if ever there was one.'

We were relieved to find that there was no prospect of our being brought into personal encounter with the utterer of that fiendish yell, and did not envy those upon whom devolved the duty of 'caging' Black Kate in her 'tantrums.' By this time we had reached the court-yard, where some dozen or more male lunatics were moaning about. Some of these were drivelling, gibbering idiots; others, but for a certain restless, wandering expression in the eyes, might have passed muster as sane to one not used to detect the symptoms of lunacy. All of them were apparently quiet and harmless. One big simple-looking fellow, who like Abner had bereft a fellow-creature of life, had a rough model of a ship in his hands, and informed us that he had fought with Nelson at Trafalgar, as boatswain on board the *Victory*, when he was four years of age! The whole batch of them gave me the idea of having been turned loose into this court-yard like animals in a pen. There were no seats for them. No attempt had been made to provide them with employment or amusement. It was a melancholy sight to see them pacing backwards and forwards in as objectless and meaningless a fashion as the wild beasts in a menagerie. But what particularly attracted my attention were the 'cages,' of which there were six, occupying two sides of the square. They were oven-shaped dens in the wall, nine feet by four, with just enough room for an average-sized man to stand upright in the centre of the arched roof, and were fitted in front with iron bars of great thickness and strength.

'Is it in that kind of thing,' I asked, 'that Black Kate is "caged" just now?'

'Yes, sir,' said the turnkey in the most matter-of-fact tone. 'When they're very violent, we sometimes have to keep 'em there for a week or ten days. We feed 'em through the bars.'

'But how do you clean the cages out?' I inquired.

'Lor bless ye, sir, we dursn't clean 'em. It would be as much as our lives were worth to venture within the clutches of one on 'em when they're in them cages. There's Abner now; you wouldn't believe how strong that fellow is when he's got his fit on. He's a little chap, as you see; but he's more than a match for any two of us when he's bad; and it generally takes three of us to get him into the cage.'

I was not surprised that any human being, sane or insane, should resist to the utmost of his power an attempt to shut him up in one of those wild-beast dens and treat him like a savage animal; but it did seem incredible that the mild, vacant-faced,

inoffensive creature we had just passed should be capable of being suddenly transformed into a raging demoniac. I had begun to take an unaccountable interest in Abner, and I felt a strange curiosity to see him in one of these terrible paroxysms of fury. I confided this morbid desire to one of my friends. The turnkey overheard me, and turning sharply round, said with grim emphasis: 'Then you'd never want to see him a second time, sir, unless you're a glutton for horrors. It's an awful sight to see him when he's bad; and to hear his language when he's raving would appal you.'

I was half-ashamed of my idle wish; but I little thought it would ever be gratified, and that I should some day verify by experience the turnkey's forcible description of Abner in his fury.

We had made our round of the prison, and were leaving the place, when we were met by the governor, who knew one of our party, and courteously invited us to lunch. My thoughts were still running upon Abner; and on questioning the governor about him, I learned the full details of his painful and tragic story. They were as follows.

Twenty years previously Abner, who, though of humble parentage, was a young man of great promise, had found himself in a position to attain what had long been the dearest ambition of his life—a university education. He had scraped together a little money himself; and some friends who had faith in his powers had offered to make up between them whatever deficiency there might be. Every one prophesied for him a brilliant career, and he was himself elated with hope and joy. But his hopes were rudely shattered at a blow. His only sister, to whom he was passionately attached, suddenly lost her husband by an accident, and was left penniless with two children. Brother and sister had been left orphans when they were very young, and had been brought up together by an old aunt, their only relative. The aunt had died soon after her niece's marriage, and the young widow had no one in the world to look to for help and support but her brother. Abner made his decision at once. It was clear to him that he must sacrifice his ambitious hopes to provide a home for his sister and her children. The mastership of the National School in the little town of which he was a native fell vacant. Abner applied for the post, and obtained it. The salary was but small; but it enabled him to offer his sister and her children a home, and in that home they lived happily together for more than four years. Abner was devoted to the children, both boys, and loved them as if they had been his own. The elder of the two was especially the object of his affections, and his favourite companion. The child, now eight years of age, had twined itself close round Abner's heart when it was stricken with mortal sickness, and died. Abner's grief was uncontrollable; the loss seemed irreparable. After a while, however, he began to devote himself to the surviving child, and sought to console himself for the dead by the society of the living brother. But he was never quite the same as before the child's death. His sister marked a great change in him. He would give way to fits of depression and melancholy, from which neither her loving care nor the art-

less prattle of the child could rouse him. Things had been going on like this for some months, when one summer holiday at haymaking-time Abner took the boy out with him for a day's ramble. About noon he came back alone, and to his sister's inquiries after the child, answered that he had left it playing with some other children in the hayfield not far off, under the care of a neighbour, who had promised to see after the boy till he was tired of his play and wished to go home. The mother was satisfied with the explanation, but she noticed that her brother was unusually silent and moody at dinner. When the meal was over, he said to his sister: 'Come, let us go and see our children.'

She remembered afterwards that he had put an emphasis on the plural, but at the time she only understood him to mean her boy and his playmates.

They went together to the hayfield, and Abner led her to a shady corner of the meadow, where, comfortably ensconced in a hay-cock, the child lay apparently asleep.

'Don't touch him,' said Abner; 'he is too happy to be awaked.'

There was a strange pallor on the boy's face, which alarmed the mother. She was bending anxiously to see why the usually rosy cheek was so white, when Abner roughly seized her by the arm.

'Leave them alone,' he said in a hoarse whisper. 'Can't you see they are together, and are happy!'

Hardly heeding these strange words in her motherly anxiety about the pale face of her darling, she stooped and gently touched the child's cheek. It was quite cold. She started, then caught the boy frantically in her arms. His little limbs were stiff, and his clothes were drenched with blood. Uttering a piercing shriek of horror she fell fainting with the child in her arms. When the haymakers who were at the far end of the large meadow came up to her, Abner had disappeared, and at first they thought both mother and child were dead. The mother had only swooned; but the child was dead and cold, stabbed through the heart with a pitchfork, which was found hidden in the hay-cock.

All attempts to find Abner failed; but about ten days after the catastrophe, he returned to his own home so changed in appearance, so haggard and thin and ragged, that they hardly recognised him. No one ever knew where he had been during those ten days. He made no effort to escape, and was arrested in his own house. It was evident that his reason was completely gone. He was like a man dazed; and from that time till after the trial, he was not known to speak a word to any living soul. He was found to be insane, and sentenced to be confined in Donjonville Castle as a criminal lunatic for the rest of his life. That was Abner's story, and it had the effect of stamping his figure ineffaceably upon my memory.

Two years later I was in Donjonville again, and with a friend I paid a visit to the Castle. The same turnkey who had been our guide on the previous occasion piloted us over the building again. I asked if Abner were still there. After replying in the affirmative, he added, looking hard at me: 'Aren't you the gentleman, sir, that said the

last time you was here that you'd like to see Abner when his fit was on?'

'I am,' I replied.

'Then,' said he, 'if you're of the same mind still, you may have your wish.'

I felt the same morbid curiosity strong upon me, and accepted the turnkey's proposal.

Arrived at the court-yard in which were the cages, I started back in disgust and horror, for I could hardly believe that it was a human being that I saw before me. His voice had grown so hoarse that it had no sound of humanity in it, but was like the savage roar of a beast, and for the most part his ravings were inarticulate. And this was Abner—the mild-eyed, vacant-faced scribbler upon the steps, who had struck me as being the very embodiment of utterly harmless and inoffensive imbecility. Horrified beyond measure, I turned hastily away from the appalling spectacle of humanity degraded far below the level of the beasts.

When we had left the court-yard, I asked the turnkey how long Abner had been in the cage, this time. 'Three days,' was the reply; 'and will probably be in three days longer before we dare take him out.'

I had seen Abner at his worst, so far as his bestial ferocity was concerned. I was yet to have a proof of his diabolical cunning. As we were passing out of the prison quarter, the turnkey called my attention to a deep dent in the massive door.

'D'ye see that, sir?' he asked.

'Yes,' I replied. 'What is it?'

'That's Abner's doing, this last fit. He slipped away unbeknown to any one, when we thought he was as harmless as a child. He got hold of a spade somehow, that the masons had been mixing mortar with. Then he lay in the shadow of this dark corner, and waited till the governor was comin' through. Then he up with the spade when the governor's back was turned and let drive at his head. Just at that moment the governor stooped to pick up a key he had dropped, and the spade struck into the solid door here, two inches deep and more, just above his head. He turned to grapple with Abner; and he's a strong man too, but it would ha' gone hard with him if he hadn't sung out lustily, and two of us come up in time to rescue him. It was as much as the three of us could do to master Abner and handcuff him. And since then he's been as you've seen him. I never knew his fit come on so sudden or break out so bad.'

'The governor must have had a very narrow escape of his life.'

'I believe you, sir. If he hadn't happened to stoop just at that minute, the spade would have smashed his skull like an egg.'

It was thus I saw Abner for the second time, and it was long before the horrible sight ceased to haunt me. I was yet to see him a third time, but under very different circumstances.

Seven years had elapsed since the visit to Donjonville which I have just described, and again I found myself in that neighbourhood. Among the many changes which had taken place there during the interval was the erection, within a few miles of Donjonville, of a new Lunatic Asylum, conducted on the latest and most approved prin-

ciples of medical science. To this new Asylum all the lunatics from the Castle had been removed; and I was anxious to have an opportunity of contrasting the old and new style of treating the insane. That opportunity was afforded me by an invitation to one of the fortnightly entertainments at the Asylum.

In a spacious well-lighted hall there was gathered as orderly an assemblage as any I have ever seen. The programme consisted of music, recitations, and amateur theatricals—all of which were received with keen delight and appreciation. There was a good sprinkling of guests, but the bulk of the audience consisted of lunatics; and the latter seemed to me to take quite as intelligent an interest in the proceedings as the former. It was a wonderful and gratifying sight, and all the more so when I recalled that bare court-yard with its listless, mooning flock of perambulating imbeciles, and the terrible occupants of its hideous 'cages.' I was curious to know whether any of my old friends, and especially Abner, were among this decorous crowd. In the interval between the two parts of the entertainment, I got speech of the medical superintendent, and asked him whether any of the worst cases from the Castle were present that evening.

'They are all in the room to-night,' he said, 'except one who is in the hospital.'

'Is Abner here?' I inquired.

'Yes; and Black Kate too. Come with me and I'll introduce you to both. I am rather proud of those two.'

I followed in silence; and presently in answer to his call a pleasant-looking man, neatly dressed in black, came up to us. I never was more astonished in my life than when this decent, respectable person was introduced to me as Abner. I could hardly believe my eyes, so extraordinary was the change in him. There was a foolish vacant look indeed about his face still; but he spoke and answered questions sensibly; and when I mentally contrasted him with the Abner I had seen twice before, I felt that he was a rational and intelligent human being in comparison with either the unconscious imbecile or the raging maniac I had beheld previously. My whole stock of astonishment was so completely exhausted upon Abner, that it was merely with a mild surprise that I found the terrible Black Kate on introduction to be a quietly dressed, gray-haired woman, self-contained in her manner and gentle in her speech, who, but for the restless glitter of her bright black eyes—which had an unmistakably wild look in them—might to all appearance have been a nurse.

'Well,' I said to the medical superintendent, when we were left alone together after the entertainment was over, 'you have effected a miraculous transformation in those two at anyrate. I never saw Black Kate before, but I have heard enough of her doings. Abner, when last I saw him, was simply and literally a caged wild beast. I shall never forget his awful appearance as long as I live.'

'Ah!' replied the superintendent, 'the less said about those old days the better. The treatment of lunatics was barbarous and inhuman then; but people knew no better, and we must not be too hard upon them.'

I thought this was a very euphemistic way of

putting the matter; but I contented myself with asking how long Abner had been there. I was told that he had been two years and a half in the Asylum.

'And has he ever had any of his fits?' I asked further.

'Yes. He had two in the course of the first six months. But you may guess we had none of the "caging" business here. He was treated properly; and for two years he has never shewn the slightest symptoms of violence. You see we lay ourselves out to discover what employment or amusement can awake a ray of interest in a lunatic; and as soon as we have found that out, we always keep him amused or employed. The most violent are cured in a short time by that means.'

That was the last I saw or heard of Abner. I often think of him still; not as the imbecile scrawler on the steps, nor as the caged wild beast, but as the most signal instance I know of the triumph of the new system over that which to the credit of humanity has happily passed away.

#### A FEW WORDS ABOUT THE GUIDES.

No native corps in India has earned a higher reputation than the Guides, a regiment which was raised in December 1846 by Lieutenant, afterwards Lieutenant-general Sir Harry Lumsden, C.B., K.C.S.I., of Belhelvie. The corps consisted at first of three troops of cavalry and six companies of infantry. The men consisted of all the races about Peshawur, and were for the most part freebooters, who had during the stormy times preceding 1846 infested the neighbourhood, and especially the Peshawur-Attock road, which was so unsafe to the Sikhs that they could only travel it in large bodies. Many also had been Sikh soldiers, and others belonged to the predatory tribes beyond the borders. Not a few murderers were amongst them; and a large proportion sought service in our ranks in order to escape either punishment from the Sikh authorities, or to avoid private vengeance. To prevent these turbulent men from coalescing against their English officers, Lumsden wisely placed most of the different nationalities in troops or companies by themselves. Thus there was one Pathan troop, one Sikh troop, and one mixed troop; while in the infantry there was one company of Pathans, one of Goorkhas, one of Punjabee Mussulmans, one of Sikhs, and one composed of several races.

From the very first the Guides took part in numerous frontier skirmishes; and when, in 1848, Moolraj raised the standard of rebellion, Lumsden marched with the corps and took part in the siege of Mooltan. During the Mutiny, the corps, under Daly, marched from their station on the frontier to Delhi, a distance of seven hundred and fifty miles, in twenty-eight days. This unparalleled feat, moreover, was accomplished during the hottest part of the year. Within three hours of their reaching Delhi, the Guides were engaged with the enemy, and every one of their officers was wounded. As an illustration of the sort of work that continually falls to their lot, and how they perform it, we relate the following story.

In 1852, an expedition was sent out against the Khattuck Khails, occupying territory between Peshawur and Kohat. Who was in command of the force we do not know, neither does it signify,

but Major, afterwards Sir Herbert Edwardes, accompanied it as political officer. The enemy took up a strong position in a village at the foot of a high hill. Captain Turner of the Guides with a company of his regiment was sent to dislodge them. He did so in gallant style. The Khuttucks resisted stoutly; but the Guides were not to be denied, and soon the enemy were seen streaming out of the rear of the village and up the hill at the back, swiftly followed by Turner and his company. After proceeding a short distance, the Khuttucks reached a cliff, the only ascent to which was by a side-path only broad enough for one man to mount at a time. Speeding up this path, the Khuttucks lay down on the edge and opened fire on their pursuers. Nothing heeding, Turner pushed on till he too reached the foot of the cliff. He then found himself in an awkward predicament. Unwilling to fall back—indeed he would have lost half his men had he tried to do so—and seeing that it was hopeless to dream of attempting to reach the foe by means of the path, he ordered his men to get close under the cliff. In this position they were safe, but powerless, and could only wait for assistance. Dr Robert Lyell was assistant-surgeon in the Guides, a tall handsome man, in the prime of life. As much a soldier as a surgeon in heart, he had been watching the fight with the keenest interest when not engaged in attending to the wounded, and perceiving that his comrade Turner was in a dilemma, he hastened to Edwardes, and thus reported: 'Turner is in a regular fix. He can't get up that cliff, and he can't get away. I have been looking at the ground; and if you send a party up that spur, it will be able to get up to the top of the cliff and take the defenders in flank.'

Edwardes scanned the scene for a moment with his keen glance, then turning to Lyell, replied: 'All right. No one can manage the job better than yourself. Take some men with you, and do it. Come with me and I will get some sepoy for you.'

Going to a Goorkha regiment, he told the commandant to place a detachment at Lyell's disposal. Making a long circuit, Lyell reached the spur above spoken of, and began to climb its steep sides unseen by the foe. Full of ardour and strength, the Englishman strode up the hill, and soon distanced all but a handful of the gallant but short-legged little Goorkhas who panted close at his heels. On reaching the summit, Lyell cautiously peeped over the edge, and found, as he had expected, that he was on the verge of the shelf occupied by the enemy, and somewhat in their rear. He also saw that the attention of the Khuttucks was completely taken up with Turner and his Guides. About twenty-five yards from where Lyell stood, and between him and the enemy was a *sungur*—a sort of rifle-pit built up with loose stones. It was unoccupied, and Lyell determined to seize it. As soon therefore as he had got seven men together, he led them at a run for the *sungur*. The Khuttucks at the sound turned and fired a volley, which being at a short range, killed two of Lyell's men and wounded the remainder, Lyell himself being hit by a splinter of a stone. Lying down in the *sungur*, Lyell waited till some more of his men joined him. By twos and threes they rushed into the *sungur*, till

the total force present numbered twenty-five. Amongst them came Koer Singh. He was the *subadar* (native captain) of the Goorkha company of the Guides, and really had no business to be there. Seeing, however, Lyell starting off on his expedition, he had hastily followed. He was a little thin man, quiet and gentle in his manner, and always smiling. By no means the man who would by a stranger have been pointed out as likely to prove a hero. He was, however, a very lion in fight, and never so happy as when present where swords were flashing and bullets whistling in their deadly flight. The last man to arrive was Dal Singh, a *sowar* (trooper) of the Guides. He was a remarkable man. Owing to his signal gallantry, he was promoted to the rank of *duffadar* (corporal) after every skirmish; but his temper was so uncontrollable, his knack of getting into scrapes so unrivalled, that within six weeks he always found himself a simple *sowar* again. No more than Koer Singh had he any business to be with Lyell; but in his thirst for the excitement of danger he could not refrain from following, and leaving his horse behind him, strode up the hill as quickly as his long cavalry boots would allow him. When he reached the summit, he perceived Lyell and his small party in the *sungur*, and at once ran across to join him. As soon as he arrived, he said: 'Sahib, we mustn't stop here all day. I will jump on to the top of the parapet; they will fire at me; and we shall be able to rush on them before they can reload.'

Before Lyell had time to say a word, Dal Singh sprang on to the parapet, waved his sword, and by way of rousing them to action, hurled abuse at the Khuttucks. Every one of the enemy fired simultaneously at the man; and strange to say, missed him. Then Lyell, followed by Koer Singh and Dal Singh, dashed at the Khuttucks, who had not a single firearm loaded, and consequently fled before the impetuous attack. Lyell hastening to the edge of the cliff, shouts: 'They've bolted, Turner. Make haste and come up.'

Turner was not slow to respond to the invitation; and soon the two detachments were united, and in high spirits following up the Khuttucks. So hot was the pursuit, that the Khuttucks had no time to load, and were chased up the hill and over the further edge. There Turner and Lyell prudently halted. To keep the enemy on the move, however, they fired muskets, hurled stones, and sounded bugles till the Khuttucks were desisted far away quite at the foot of the hill.

Lord Dalhousie was so highly pleased with this affair, that he gave Lyell the very best appointment which could at the moment be bestowed on an assistant-surgeon, namely that of principal assistant to the opium agent at Patna. How little do we know what is for our good! The reward was fatal to Lyell. Five years later he perished at the hands of a Mussulman mob, a victim to his rash bravery. Thus ended, in the flower of his age, the promising career of the gallant, noble-minded, popular Lyell!

As to the other heroes of the fight with the Khuttucks; Koer Singh and Dal Singh were decorated with the Order of British India, and given the rank of *bahadur*. Koer Singh afterwards fell at the head of his company at Delhi. Dal Singh five or six years later got into such a scrape that unwillingly his officers were compelled to turn

him out of the regiment, and he disappeared from view. Turner, before this, had been attacked by a violent fever, which carried him off in the course of a few hours.

The *esprit de corps* of the Guides was shewn not by swagger or dandyism. They never boasted or made much of their exploits. Their pride consisted in taking it as a matter of course that any task however difficult or dangerous would be thoroughly performed. Neither did they indulge in any of the fopperies which are so common in irregular corps.

To illustrate the feeling which pervaded all ranks of this celebrated corps—a feeling which is still characteristic, as recent events can testify—we may mention, that on a certain subaltern's joining the corps, one of the older officers said to a native officer: 'Well, Lootuf Ali, what do you think of the new *salib*?' The proud answer was: 'No matter what sort of a *salib* joins us, we soon make a Guide of him.'

Of all the many gallant officers who have served in the Guides, none left a better name behind him than young Quintin Battye, who fell a few days after his arrival at Delhi. Almost his last words, as the life-blood was ebbing away, were: 'Dulce et decorum est pro patria mori' (It is sweet and proper to die for one's country). Young Battye was aide-de-camp to one of the Lieutenant-governors (we forget which), and was much petted, for he was a good-looking, most engaging lad. Fired with a love of distinction, he was not contented with a life of ease and comparative idleness; therefore, one day when the Lieutenant-governor asked what he could do for him, he eagerly replied: 'O sir, get me into the Guides; I could wish for nothing better.' Into the Guides therefore he was put. Scarcely had he joined the corps, when Lumsden the commandant received information from one of his spies that a certain freebooter would attack a neighbouring village the following night. Lumsden determined to catch him; and as the task was one requiring great local knowledge and craft, he selected not an officer, native or European, but a simple sowar. (Lumsden never allowed himself to be fettered by routine, but always selected the men best fitted for a duty, without regard to other considerations.) This man, whom we will call Peer Khan, was a small landholder, a man between fifty and sixty, and covered with scars. He would sometimes bare his right arm, and shewing the marks of numerous wounds, boastfully exclaim: 'The blood of seventy Hindus is on this arm.' Under his command, therefore, a detachment was ordered to march at dark on a secret expedition. Battye heard of the latter, and determined to join it. He had so recently joined that he had not yet got Guide uniform, so first binding him over to secrecy, he borrowed from a brother-officer a Guide coat and turban, and set off with the party as a simple volunteer under Peer Khan's orders. The next morning, the detachment returned unsuccessful, the freebooter not having appeared. As soon as he arrived in camp, Quintin Battye went to Lumsden and said to him: 'I have done very wrong sir, and I have come to tell you what I have done. I went out last night with Peer Khan. I could not help it; but I know I was wrong.' Lumsden, veiling his secret admiration for the gallant lad under a stern demeanour, reproved him severely, and

wound up by saying: 'I expect you to promise that you will never do so again.' The required promise was given, and it is needless to say faithfully observed. Our readers need scarcely be reminded that absence without leave, especially in troublous times, is a very serious offence in her majesty's service.

## MY WIFE'S INHERITANCE.

### IN THREE CHAPTERS.

#### CHAPTER I.—THE INHERITANCE.

MR CHARLES RUSSEL, once the most noted lawyer of Kinton, was dead. He had passed away in the night, full of years and honour—passed away so calmly and peacefully, that even the nurse could not tell at what precise hour the spirit had left the worn-out body.

I am, or rather was, a village doctor. At the time of which I write, I was about six-and-twenty years of age, and three years previously had bought a practice in the village of Cottam. It was not a large village; but being only about five miles from the important seaport of Kinton, it could boast of a good many somewhat pretentious villageresidences. These were inhabited, some by merchants of Kinton, who travelled to and fro morning and evening; others by men who had ceased to take an active part in business, and had retired to the country to enjoy a well-earned repose. To this latter class belonged the Mr Charles Russel whose death I have just recorded. To a small inherited competence he had added the savings of a successful professional career, and retiring to Cottam, had bought a small mansion on the outskirts of the village, called 'The Willows.' 'Wills,' the country people got to call it, referring—with a vague idea of wit—to the proprietor's previous fame as a conveyancer and maker of wills. Mr Russel had never been married, but had adopted the orphan daughter of his sister. Ellen Saunders at the time of my story was about twenty-one years of age.

It was not until I had been two years at Cottam, that I was introduced to Mr Russel. During this time he had more than once required professional attendance, but had always sent for the family doctor from Kinton. One day, however, a servant came in great haste for me to go to the Willows; 'for,' said she, 'master has fallen and broken his leg.' Of course I went immediately; but fortunately found matters not so bad as represented. Mr Russel had been walking in the garden, as was his wont, when he accidentally stepped sideways upon a stone, and his ankle twisting, he fell heavily forward. The result was a very bad sprain, aggravated by the age and weight of the sufferer. I soon had the boot off, and applied the usual remedies; and before I left he was very much easier. On my next visit he was still better; but I forbade him to use his foot in any way. Day by day I called, and each day found him improving, although he chafed considerably at the confinement, as he missed his usual walks. Gradu-

ally he began to talk of other matters—politics, literature, &c.; I found him to be an unusually well-read man; and as reading had always been one of my chief delights, we got on very well together. Mutual esteem quickly ripened into mutual friendship; and at length I was invited to visit him one evening, an invitation of which I was not slow to take advantage. When I arrived, I found him sitting in an easy-chair, with his foot on the leg-rest; for as yet he was unable to get about. Beside him was a small chess-table, with the men all in their places.

'I was just about,' he observed, 'to have a game of chess with my niece; but she has been called away for a little while. By-the-bye, do you play?'

'A little,' I answered; the fact being that chess used to be a very favourite game of mine; but not having played for years, I was somewhat doubtful of my powers, and therefore answered cautiously: 'A little—not much.'

'Do you mind playing with me? It would be quite a charity, I assure you, for I am heartily weary of sitting here alone.'

'I will try with pleasure,' I replied; and with that we commenced.

I soon found that, good player as I was, he was slightly better; and at the end of the evening, he was two games ahead. This put him in great good-humour, especially as his niece, who had now joined us, had witnessed the old gentleman's victory.

'There is some satisfaction,' he was pleased to say, 'in playing with you, as you are difficult to beat. I sometimes play with Ellen here; but it is almost like playing with the right hand against the left, where all the schemes originate in the same mind. I know all her moves almost before she takes them. She always opens in the same way, and hardly ever originates a fresh attack.'

'Well, uncle dear, you cannot expect me to be as deep as you are. You know you often used to say: "Girls never *can* reason."'

Hitherto I have hardly mentioned Ellen Saunders, although I had often seen her. Perhaps some of my readers would like a full description of her, the colour of her hair and eyes, the shape of her nose and ears. If so, I am afraid I must disappoint them. I really cannot describe her; and yet in my eyes she was one of the most beautiful creatures I had ever seen. I say in *my* eyes. Perhaps in yours, dear reader, she would not have appeared so; it depends on your taste and sex. I, however, had no doubt at all on the matter.

Well, that first evening at chess was followed by a good many more. Two or three times a week I would find my way to the Willows, and always received a hearty welcome from the old gentleman. So things went on for three or four months. During my visits, Ellen was constantly in and out of the room, ready to attend to her uncle; and when leisure permitted, she would bring her

work, and sitting opposite the chess-table, would occasionally watch the game. Sometimes she was accompanied by another young lady, who I afterwards learned was her hired companion. Miss Leclerc—for that was her name—had entered Mr Russel's family as governess when Ellen was about fourteen years of age, she herself being only seventeen. When Ellen's education was completed, the governess was transformed into the companion, and such she still remained at the time of my visits. I, however, did not see much of her, as she did not often come into Mr Russel's sanctum.

I have said that Ellen often watched the game; and I cannot tell how it was, but whenever she did so, I was almost invariably checkmated. I suppose I was nervous, and played badly. At anyrate, lose I did; and yet I would not have had her away for the world; for by this time—I may as well confess it—I was deeply in love with her; and what if I did lose a few paltry games of chess? As long as her sweet eyes watched my proceedings with interest, I was well repaid. I may say parenthetically that I always took my revenge when she was not present; for by this time I had regained my old play, and was Mr Russel's master at it.

Up to this period no word of love had passed between us; and sooth to say, I knew not whether it would be agreeable either to her or her uncle. Nay, I was almost inclined to think that it was wrong for me to entertain such a feeling, under the circumstances in which I had been introduced to the family. Right or wrong, however, I felt it to be a settled fact, and I could no more help it than I could help breathing. This deep feeling, joined to the uncertainty of its propriety and to a vague sense of its hopelessness, quite unsettled me; indeed, so much so that I resolved to stay away from the Willows—at least for a time. I think I should have persevered in my resolve to stay away; but by the end of the week I received so kind a letter—remonstrating at my absence—from Mr Russel, that my determination gave way, or rather, I may say, gave place to another. This was to speak to him, to admit my affection for his niece, and to crave his permission to address her. 'By so doing,' I said to myself, 'one source of uncertainty will at anyrate be removed.'

The same evening found me again at the Willows; and taking advantage of Ellen's absence, I told Mr Russel all—in a nervous disjointed manner, I have no doubt, but still plainly and simply. I did not praise myself, nor did I in a mock-modest style speak of 'unworthiness, &c. &c.'

The old gentleman heard me to the end, speaking never a word, but looking with half-closed eyes straight into my face; a habit acquired no doubt in his professional career.

'I am pleased, Mr Wallis,' he said at length when I had finished, 'to hear this confession, because I have seen for some time "how the land lay," as the sailors have it.'

'You have noticed it!' I exclaimed in surprise.

'Yes,' he repeated. 'We lawyers are trained to observe little signs. Many a time an almost imperceptible look of surprise, or the faintest shadow of dismay on a man's face, has given me the clue

in a difficult case. Can you think then, that signs so plain as you have given could be overlooked by me? No; my friend. I needed not your present confession to tell me that you love my niece; and yet, as I have said, I am pleased to hear it, because it confirms the estimate I had formed of your character. What that estimate is, I need not say, except that I am quite willing that you should try to win her affections. Had it not been so, I should not have written the letter of yesterday, but have found some means of causing you to cease your visits entirely.'

On hearing this my heart was almost too full for utterance; I grasped him by the hand, and thanked him most heartily for his great kindness.

'Mind,' he continued, 'I can say nothing about Ellen. You have my consent to try to win her; but beyond this I cannot go. She must please herself. My advice, however, is, do not hurry matters; continue your visits as heretofore, and you may perhaps find opportunities of observing how her inclinations tend.—But there! Whenever was the advice of a practical old lawyer—and a bachelor to boot—taken by a young fellow in love! So go and do whatever your heart, tempered by gentlemanly feeling, dictates.'

But I must hasten on; this is not a love-story, and I have very much more to tell. I took Mr Russel's advice in one respect—that is, I continued my visits to the Willows, and was happy to perceive that they were agreeable to Ellen. In short, I gradually won her regard, confessed my love, asked her to be mine; and before a year was out we were fully engaged. Had I had my way, we should have been married at once; but just at this time Mr Russel's health began seriously to fail. He never seemed to be quite himself again after the shock of his fall, and now appeared to be failing very fast. But as his health became feebler, his affection for Ellen seemed to increase, and in a minor degree for me also. I can hardly explain the liking he had taken to me, except that having no relation in the world but Ellen—at least not to my knowledge—he centered all his affection upon her; and as I loved her also, he loved me too for loving her. This may not be the correct explanation; but at anyrate it was the only one that occurred to me.

One day—I shall never forget it—a servant brought me a message that Mr Russel wished to see me in his bedroom. When I arrived there I found him still in bed, where I had seen him in the morning, for this was one of the days—occurring pretty frequently now—when he found himself too unwell to get up.

'I am very sorry to see you like this, uncle,' I said—for by this time we had become very familiar, I calling him uncle, and he addressing me as Alfred—'I thought you looked better this morning.'

'Ah, Alfred! these east winds are too much for me; they go through me, as people say, and I find myself best in bed.—Well now, I have sent for you because I have something particular to say to you. I may not be long for this world; I sometimes think I shall never get about again. At anyrate, I thought it advisable to make my will. Of course, in doing so I, as you may well suppose, needed no assistance. Having made scores of wills for other people, it would be strange if I let any one else make mine.

Now, as I have great faith in your integrity and honesty, I am about to adopt the unusual course of shewing it to you. There it is; read it carefully through.' Not a little surprised, I took the paper, and read as follows:

'I, CHARLES RUSSEL, of the Willows, Cottam, declare this to be my last will and testament. I bequeath to Elizabeth Watkins, my housekeeper, the sum of one hundred pounds. I bequeath to Jeannette Leclerc, the companion of my niece, the sum of fifty pounds. I also bequeath to my nephew, Charles Russel, the sum of two hundred and fifty pounds. And as to all the rest, residue, and remainder of my real and personal estate, I devise and bequeath the same to my niece, Ellen Saunders, her heirs, executors, administrators, and assigns absolutely and for ever. And I hereby appoint my said niece sole executrix of this my will. In witness whereof I have hereunder set my hand, this 2d day of February 1870.

CHARLES RUSSEL.'

Then followed the attestation clause, signed by two witnesses.

When I had finished, I remained silent a few moments, and seeing an inquiring look on my face, he said: 'I have let you know this because, loving no one in the world as I do Ellen, I have left all to her. At the same time, I think she ought to have the advice and assistance of some one who knows more of the world than she does. This advice and assistance I have every confidence that you will render, especially when I consider the relation in which you stand to each other.'

'But what of this nephew?' I asked. 'I have never heard of him before.'

The old man's face grew dark as he interrupted: 'Do not mention him, I pray. I have forced myself to leave him a little, but I never wish to see or hear of him again.' Then, after a pause, he continued: 'There; put the will back in its envelope and seal it up; you will find my seal on the table.' This done, he said: 'Now, place it in the desk, and then come here again. I have another paper to shew you.'

The desk referred to was one I had often noticed standing on a table at the other side of the room; it was not a large one, only about eighteen inches long, twelve inches wide, and at the back nine inches high, with a lid sloping down to about three inches in the front. It was made of some dark wood, and was evidently very old. Having placed the will therein, I said: 'Had I not better lock it?'

'Yes; it would perhaps be as well. But lately I have not done so, as I have only kept writing materials in it; and now I am afraid the key is lost. I have not seen it for a long time. But—with an appearance of sudden recollection—'if you wish to keep the will safe, I will tell you a secret: in that desk there is a compartment known only to myself; follow my instructions carefully, and I will tell you how to open it.'

'I am all attention,' I replied.

'Well, first raise the front lid, and you will see before you, at the back, six small drawers arranged in three rows of two each. Now pull the middle top drawer quite out of its place.'

'Done!' I said, peering into the cavity thus formed. 'But I see nothing except the back of the desk.'

'Ah! what you see is not quite the back,

resting fact of the existence of a Jewish colony in Southern India, and from the circumstance that a highway was thus open between Palestine and India, we cannot be astonished at this other equally interesting fact, that when the Portuguese came to India three centuries ago, they found at Malabar a community of *Syrian Christians* who are there to this day.

To the north of the city of Madras, situated on a narrow neck of sandy land, between the ocean and an inland salt-water lake, stands Ennore. This was once the sanatorium for the English inhabitants of Madras, almost their only retreat from the fiery land-winds of their hot season, and where newly married couples were wont to betake themselves to spend their honeymoon. But now Ennore is deserted; for the English of our days are more fortunate than their fathers. Having the ubiquitous railway, they can rush away from the scorching heat of the plains to the pleasant plateau of the Mysore country and to the glorious mountain ranges of the Neilgherries. Still this deserted village of Ennore holds a place in my memory, not merely on account of some pleasant days spent there, but by reason of a melancholy incident that made a sad impression on my mind at the time, and which was recalled the other day by a paragraph in a London newspaper. That paragraph—alas! one of many such—was to the effect that three large ships which had sailed from their respective Indian ports some months before, had never more been heard of, and were therefore given up as lost. One Sunday morning, my friend, who had a bungalow at Ennore, was roused by his servants, who came with the information that three dead bodies were lying on the sandy beach, having been tossed up by the rolling waves. Having gone out, he found them to be the lifeless forms of three English sailors. Carefully and reverently he had them borne up, and laid in a large grave beneath a few overshadowing palm-trees, my friend reading over them the English service for the dead. All that could be said of these sailors was that they had perished with some ship that had foundered in the Bay of Bengal. I confess to sentimentality, if it be sentimentality, for by those graves I have more than once stood, and mournfully thought of the mother in her English home wearily waiting for the return of her sailor-boy; and of the anxious wife straining her eyes through storm and darkness for the long-looked-for ship that bore the husband of her youth, and she

Expectant of that news that never came,  
Gained for her own a scanty sustenance,  
And lived a life of silent melancholy.

I remember being told by a ship-captain that on an outward voyage, off the coast of Ceylon he one day counted ten ships that were in sight. Suddenly a cyclone encircled them; it became dark as midnight. The storm was fierce, but did not last long, for speedily it swept on in its devastating course. But the work of destruction and death had been wrought. Not a ship was to be seen. His own, the narrator told me, was a shattered wreck; but as to the others he could say nothing. Some of them may have passed safely through the tempest and been lost to view; whilst others it was to be feared had been engulfed amidst the foaming billows. And so perish many

of the brave and true; impenetrable darkness shrouds their death; and nothing more is seen or heard of them, save when a kindly wave washes their bodies upon the beach, as it did to those sailors whom I saw buried on the Indian shore.

#### TO THE LADIES.

WHEN bills are long, and Credit low,  
And things are bad as they can be,  
And Banks go down with sudden blow,  
And nought is sure—but Penury!  
When 'Pater' in his private den  
Looks sad, and savage as a bear,  
Because his funds are low—O then,  
Dear Ladies—of your debts beware!

Your gorgeous gown of new silk stuff—  
Will surely 'do' a second time!  
Of hats and bonnets, you've enough!  
Your jackets too are in their prime.  
No need to 'run up little bills,'  
Because your last are not yet paid,  
Nor multiply a thousand ills  
By bringing others to their aid!

You see how 'Pater's' rugged brow  
Is seamed with lines of care and grief.  
The cause is plain—and even now  
His case seems quite beyond relief.  
His income—just five hundred pounds,  
Is nothing—when a thousand's due.  
Things really are beyond all bounds.  
The reason, Ladies, lies with you!

'So many wants,' you always say;  
'So many things we have to buy;  
And money runs so fast away,  
That we can't pay (although we try);  
And so the bills just grow and grow  
Like mushrooms, only not so good.'  
And 'Pater' paces to and fro  
His sanctum, in a horrid mood!

I think you sometimes might refrain  
From buying—when you cannot pay;  
The reason is so very plain  
That 'money runs so fast away!'  
Restrain expenses—stay at home;  
Make 'Pater' happy if you can;  
And then whatever crash may come,  
'Pater' will be an honest man!

W. H.

The Conductors of CHAMBERS'S JOURNAL beg to direct the attention of CONTRIBUTORS to the following notice:

- 1st. All communications should be addressed to the 'Editor, 339 High Street, Edinburgh.'
- 2d. To insure the return of papers that may prove ineligible, postage-stamps should in every case accompany them.
- 3d. MANUSCRIPTS should bear the author's full *Christian* name, surname, and address, legibly written.
- 4th. MS. should be written on one side of the leaf only.
- 5th. Poetical offerings should be accompanied by an envelope, stamped and directed.

Unless Contributors comply with the above rules, the Editor cannot undertake to return ineligible papers.

PRICE 1½d.

## EYESORES.

ABOUT thirty years ago, on visiting a new and rising town at the mouth of the Thames, the first thing that invited our notice was a handsomely built terrace facing the sea. All the houses were completed and apparently occupied, except one at the middle of the row, which remained in that ghastly rudimental condition usually known as 'skeleton.' The doorway was closed by a few deal boards. The windows were open holes in the wall. The roof was on; but the whole interior was a vacancy without floors or staircases. Birds and bats could flit in and out at pleasure. The only inhabitants were a colony of stray cats, which were here visited by the resident cats in the neighbourhood; the whole in a friendly way holding cheerful soirées when the rest of the world were in bed. Ordinarily, an aged tabby, reputed to be the Queen of the Cats, sat on a lower window-sill in the pride of possession, and was ostensibly guardian of the establishment.

The question soon asked by visitors to this charming new watering-place was why the skeleton house at the middle of the terrace remained unfinished and unoccupied. No one could give a satisfactory answer. The house had so stood for years. The owner of it was well known. When appealed to for an explanation, he condescended to reply by saying with perfect suavity, but in a manner designed to close the interview: 'That house, sir, is a mystery!' And this was all that could be got out of him. In vain were all remonstrances by speech or writing to the effect that the house was a public Eyesore, that its present condition was damaging to the property in the neighbourhood. 'The house was a mystery!' With that everybody had to be satisfied. Sarcasms in the local newspaper on the subject went for nothing. The owner of the spectral house was of that thick-skinned order of beings who are impervious to assault. Wrapped up in his own notions, the world was nothing to him. He would do as he liked. Endless were the speculations concerning his intentions. Some

thought he had felt affronted in consequence of certain arrangements connected with the general plan of the terrace, and took this method of revenging himself on the other proprietors. Others less charitably thought that he was a regular 'Eyesore Jack,' and was waiting to have his ownership bought up at six times its value. How long the Eyesore lasted we cannot tell. Death, we think, must have years ago settled the matter. The mystery, whatever it was, must surely be revealed. The mysterious building, we hope, has now got in its windows, and been thoroughly furbished up like the other respectable dwellings in the row.

EYESORE JACK, of whom the owner of this strange house may be held to have been a kind of type, was no fabulous character. As a living entity, he had strutted his day on the stage. Wholly wrapped up in self, and with some capital to start with, his plan of operations was original. It consisted in making himself a general nuisance. Cunningly looking about, he watched opportunities of acquiring patches of ground, on which he would build something so hideous, that the neighbours were fain to buy him out at almost any cost, in order to rid themselves of the Eyesore. In this way, besides pocketing a large sum, he enjoyed the pleasure of a successful strategist, and was encouraged to look out for a new field of enterprise. A gentleman purchasing a landed estate for the purpose of being improved, beautified, and laid out as a choice place of residence, was viewed as fair game. Ascertaining in what direction was to be the view from the windows of the mansion, Jack quietly considered where he could manage to plant his Eyesore. Fortune was perhaps favourable for the wretch's manoeuvre. He made himself proprietor of a small spot; and there, when the mansion was sufficiently advanced, he commenced to rear his unintelligibly odious group of buildings. The owner of the splendid new mansion became alarmed at the growth of this new and unforeseen phenomenon. What is that strange jumble of brick walls, chimneys, and tiled roofs, rising up right in front of the library

and drawing-room windows? At first, there is the usual mystery; and then comes the startling intelligence that the nondescript jumble is to be unitedly a slaughter-house, a manufactory of pig-meat, and a candle-work.

Consternation! Lawyers consulted! Negotiations, of course, ensue. Jack must be bought up, no matter at what cost; there is no help for it. The land he had acquired was a freehold, and the use he proposed to make of it was beyond challenge. Accordingly, Jack was not easily dealt with. Besides standing complacently on his rights, he had much to say for the probable success of his multifarious undertakings. He stood greatly on his project of manufacturing pig-meat. The composition was a scientific discovery of his own, and from it alone he expected to make a fortune. 'But why should he fix on this particular spot for his great enterprise? It was quite unsuitable for manufacturing purposes.' 'Not at all; it was exactly the thing. There was a convergence of roads near the place, and room to expand as the business increased,' &c. In the negotiations throughout, Jack was cool and imperturbable. Instead of the mean sneak and rascal that he was, he appeared to be a man of enlarged views of commercial industry, and of the most perfect probity. The affair ended as might have been anticipated. Jack is bought up at an enormous advance on his outlay, and walks off with his booty. The jumble of buildings disappears. There is a sigh of relief throughout the mansion that had been so scandalously menaced.

In the works of Gilpin and 'Capability Brown,' on the laying out of landscapes, serio-comic stories of this kind cast up. Gilpin, we think, mentions a case not unlike that just referred to. It was that of an Eyesore Jack who set down a butcher's shop within view of a gentleman's mansion. Gilpin saw through the trick, and resolved to circumvent it. Allowing the Eyesore to be completed, and rejecting offers of a compromise, he planted a group of trees, which effectually shrouded the unseemly cluster of buildings from observation. Finding himself outwitted, the projector of the Eyesore gladly disposed of his property for a small part of what it had cost him. In the metropolis, cases of encroachment in the form of Eyesores for furtive purposes are continually occurring, and if not compromised, frequently become subjects of litigation.

The world was created in the exuberance of natural beauty. Man has defaced it with his absurdities. Greed, selfishness, stupidity are never at rest in introducing the element of ugliness. Even when taste interposes to do that which will be pleasing to the eye, there is always some wretch at hand who is ready to vex and interrupt. Eyesore Jacks intrude in all quarters. It is no excuse that they are only doing what they please with their own. 'The higher moral law prescribes that we are not entitled to perform acts which interfere with the rights and comforts of our

neighbours. Offence must not be given unless under some paramount necessity. It is very true that a man may do what he likes with his own property; but it is with an important qualification. He may not, without incurring the character of a savage, inflict a perpetual Eyesore on one of Nature's beauteous landscapes. See, however, what abominations are in this respect every day perpetrated, and generally productive of grumblings and discomfort.

We all admit that excavations must take place for the purpose of procuring stone, slate, coal, iron, and so forth; but that is no proper reason for creating permanent Eyesores in the shape of great heaps of mineral refuse. We have a right to complain that the heaps, in their offensive ugliness, are not in due time either hurled back into the chasms whence they came, or tastefully covered with shrubs and herbage. On a hill-side opposite a gentleman's residence is seen a rude gap with a vast heap of slaty debris poured down the slope, producing what is undoubtedly a grievous Eyesore. The hill in its rich beauty of purple heather towering to a peak is cruelly defaced by a capacious wound inflicted on its side. The slate has ceased to be dug; but there apparently, till the end of time, is that unsightly scar in the mountain-side, with its cold and barren wreckage—things of ugliness for ever. A picturesque valley, crowned with poetical and historic interest, and to which tourists of taste make a pilgrimage, is heartlessly injured through the indifference of a land-proprietor. At the outlay of a few pounds at most, the Eyesore might at least be concealed by a group of pines; but any such remedy would be beyond usual routine. Another case occurs to remembrance. The last time we passed Ballalulish, when on a visit to Glencoe, we observed that the wreckage from the slate-quarries had been so copiously poured into Loch Leven as nearly to reach the island where the Macdonalds were interred after the massacre in 1692. A scene no less beautiful than abounding in pathetic interest was in the course of being irretrievably damaged, without, as far as we know, a word of remonstrance. The defacement of scenes of this kind surely comes within the category of national disaster!

Detached Eyesores like these mentioned are as nothing when compared to what assail the traveller through the 'Black Country' and some other districts of England. Miles of odious heaps of slag, cinders, ashes, incumbering the surface of the land, and excepting where small patches have been spared, shrouding the face of Nature in unmitigated ugliness. Brooding over all is an atmosphere loaded with smoke, which the inhabitants necessarily breathe, and that envelops animal life in perpetual impurity. Swept along in the train, you have occasion to note the vain struggle which Nature has to maintain against the encroachment of Art. Little bits of hawthorn, the relics of hedges, are reduced to the condition

of gradually perishing stumps. Rills which may have been lustrous streamlets in their day, straggle on in discoloured pools. The very sparrows, the hardiest and most audacious creatures in existence, have a subdued, dirty, dragged, broken-hearted look, and seem as if they could scarcely muster up a chirrup. If they could speak, they would probably, in the fashion of the period, appoint a deputation to wait on mankind, and represent their wrongs in having the country of their old traditions shamefully laid waste. But as in the case of many other deputations, the sparrows, we fear, would be bowed out with no prospect of substantial redress. Eyesoreism is master of the situation.

To all appearance, the proprietor of any coal-pit is at liberty to cover as much of his land as he pleases with rubbish, and so let it lie a spectacle of disgust till doomsday. This is doing what you like with your own, with a vengeance. A Society has been organised to protect ancient buildings from outrage. Will nobody utter a protest against abusing the surface of the earth? We do not see how the practice of blotting out portions of the habitable globe with coal-dust or metallic débris is to be vindicated. It would not be more absurd to allow an Eyesore Jack in his fiendish whimsicality to sink a tract of fertile country under the waters of the ocean, and thus invade the means of public livelihood. We do not doubt that questions of this kind will by-and-by come up for popular debate, and we should prefer that they were averted in time.

Large towns are for the most part a combination of Eyesores. Few of them have been constructed on a plan pleasing to the sight. Confined thoroughfares, projections where there ought to be nothing of the kind, clusters of old buildings going to wreck, but rented to masses of people who furtively prey on the community. Here and there we find a city which, after a desperate struggle with opposing ratepayers, is in the way of getting rid of its Eyesores and assuming a healthy condition. Much of this kind of improvement has lately been effected in the metropolis. But nowhere have Eyesores been so thoroughly and effectually attacked as in Paris, which, with some few things to set to rights, must be allowed to be the most beautiful city in the world. What are styled the 'manufacturing towns' of England are, generally speaking, a disgrace in point of atmospheric impurity; and not less scandalous is the state of their rivers, which constitutes a new species of Eyesore, alarming in its scope and dimensions.

A curious thing about Eyesores is that they are not generally recognised as being hateful to the senses. Accustomed to venerate the humdrum or the ugly, vast masses of people are not able to discover that there is anything particularly wrong. The setting down of a candle-work or a pigs-meat manufactory in the midst of a pleasure-ground would not strike them as objectionable.

We happen to know a pretty country-town which still cherishes an antiquated abattoir in its principal thoroughfare, as if such were quite an appropriate arrangement. A certain sharpening of the intellect is required to distinguish between the beautiful and the ugly, the appropriate and the incongruous, the salubrious and the unhealthful.

'Whatever,' says the author of the 'Tour to the Hebrides,' 'withdraws us from the power of our senses, whatever makes the past, the distant, and the future predominate over the present, advances us in the scale of thinking beings.' Well spoken, old Samuel; but the majority think only of the commonplace affairs of everyday life. When they are moved to run after sights of natural or historic interest, it is on the principle of following in the crowd like a flock of sheep. Of the many thousands of English tourists who land in Staffa every summer from Hutcheson's favourite steamers, comparatively few seem to have any distinct notion of what they have come to look at. One of these visitors, a burly well-dressed gentleman, on being shewn Fingal's Cave, sulkily murmured: 'Only a parcel of rocks—a regular imposition!' A personage of similarly neglected culture, whom we once encountered on a visit to Iona, could see nothing to interest him in the ancient stone crosses and ruins. 'I have seen,' said he, 'much better wooden crosses on the roadsides in Belgium.' 'But,' said we, interposing, 'think of these ancient stone crosses and ruins being connected with the history of St Columba.' 'Columba! I never heard of such a person. Where did he put up?' 'Somewhere hereabouts,' we replied; 'and the ruins are valued as reminding us of the dawn of civilisation and Christianity under his rule, in this part of the world more than a thousand years ago.' 'All stuff! Give me the wire and the rail; these are the true civilisers!' 'So you really care nothing about Iona?' said we to our new acquaintance on sitting down to dinner in the steamer. 'Certainly, there is nothing worth looking at in this paltry island—a lot of miserable thatched huts, and ruinous old buildings, only fit to be broken up as road-metal. I would rather see a good slab of beef before me than all the ruins in the world!' Shade of Johnson! We incidentally learned that the depreciator of Iona was a well-to-do 'Butterman' from the City.

Considering the enormous spread of railways in all directions, it is matter for surprise that they have done so little to deface the aspect of the country. Engineers, we think, have rather tried to avoid creating Eyesores than otherwise. The worst case we know of is the projection of hideously ugly, iron viaducts across some of our rivers. Nothing more offensive to the eye could have been contrived. The people in the neighbourhood offer no adverse criticism. They have not yet been schooled in æsthetics, and take it all as right. On the whole, on the score of Eyesores and inconvenient detours, the land-proprietors have been more to blame than engineers. At the starting of the railway system, many owners of land would not have the lines to come

near their property on any account. Quite as many of them endeavoured to overreach the railway companies by the most exorbitant extortions. The result has been the carrying of lines in an improper direction, damaging to the interests of the country. Some sad cases of Eyesores could be pointed out as arising from these causes. Avarice and stupidity are more to be blamed than mechanical engineering. Onlookers who charge the railways with going in a wrong direction to the injury of some agreeable suburb, are not aware that errors of this kind were unavoidable, owing to the determined opposition that was presented by interested parties. We know the case of a landowner who, by opposing the passage of a railway through his estate, caused it to be taken a long way round about; and now he is doing all in his power to have his lands and mineral fields intersected by railways. Such are among the triumphs of short-sighted stupidity.

Eyesores of a grotesque nature sometimes occur in connection with works of art. The blunders committed in setting up ugly statues in public places are becoming so notorious as to be a national evil. Clearly, some reform in this particular is required. The way to prevent these Eyesores would be not to subscribe to them, though that might be to do violence to the feelings. In a subsequent article, we may call attention to the Eyesores in connection with ecclesiastical edifices, of which the country has for some years been manfully struggling to be rid; and we are glad to think with a considerable degree of success.

Early in the present century there sprung up a laudable spirit of planting trees in bare and open spaces for the sake of beauty and shelter. Among these planters, Sir Walter Scott was conspicuous for his enthusiasm, as was demonstrated on his estate of Abbotsford. The trees employed were chiefly of the pine order, including the larch and spruce. We would not venture to say how many hundreds of thousands of acres were so planted and inclosed in the north of England and Scotland. Through such operations, extensive districts of country, formerly bare and unsightly, are now clothed and beautified. Yet, it has not been all beautiful. It is amusing to observe how, in removing one kind of Eyesore, another was sometimes inconsiderately created. So long as the arboriculturists confined themselves to operating in square masses, or belts of plantation, they did pretty well. When they attempted figures, on the ground of variety, they committed ludicrous blunders. It matters little what the figures be when executed on the level. It is very different in the case of planting on hill-sides. There, as the trees grow up, the figure, whatever it is, stands boldly in outline. We have thus no end of Eyesores in the shape of plantations. A favourite figure has been that of a fiddle. Another resembles a giant's head and shoulders, and a considerable number resemble coffins. A vast variety are so fantastic with outs and ins as to be indescribable. To ordinary passers-by, these several shapes are of no consequence. When constantly viewed from the windows of a country mansion, they become tiresomely annoying. One does not like to have a group of trees the shape of a fiddle or a giant's head and shoulders, constantly presented to him when looking out of window. The planters who perpetrated these absurdities are all dead and gone.

They passed away under the pleasing impression of being public benefactors, and so they were to a certain extent. Their only blunder consisted in heedlessly inflicting Eyesores on their unoffending neighbours. The error may be avoided in any fresh experiments in planting.

Eyesores of whatever kind arising from stolidity of character, or indifference, though often bad enough in their way, are not to be spoken of with the vehemence of detestation we would employ in cases of noted malignity and avarice. The Eyesore Jacks who deliberately plan the robbery of their fellow-creatures in the manner of which we have offered some examples at the beginning of the present paper, are only to be classed with the most worthless specimens of humanity. In their nature they partake of that demoniac agency which in the fervid language of Milton was concerned in the expulsion from Paradise. They can be thought of only with a sense of loathing. Possibly the exposure of their tricks by Gilpin and others has materially lessened their numbers. We hope it is so. There would be satisfaction in knowing that the race is extinct. At all events, there is the comforting reflection that the baser sort of Eyesore Jacks are not endowed with the privilege of immortality. They die out some time or other. And we are so thankful for it as to be inclined to compliment Death for his performances. Yes, KING DEATH! thou art in some points of view a highly estimable person, a Jolly Old Fellow. Frequently thy feats fill our hearts with anguish; but thou art likewise a kind friend, a brave deliverer from oppression. By thy means, at the appointed time, and when human laws are ineffectual in bringing relief, the world is happily rid of monsters of iniquity who, in their vile schemes, would render God's fair earth nothing short of a scene of desolation, a wilderness of sorrow and despair.

W. C.

## A LIFE'S ATONEMENT.

### CHAPTER II.—HISTORY.

*There was trouble here, as elsewhere, after all.*

A HOUSE with many gables. A quaint red-bricked old building, half overgrown with ivy, and bosomed high in trees. A house on an island, which joins east and west to the mainland by two rustic wooden bridges thrown across the pleasant river. The place—built at half-a-dozen different eras—has some sign of having been fortified once upon a time. Cromwell's people were answerable for a few of its gables. There was still a remnant of a gray stone wall, over which, as the country legends told, the men of Red Rose and of White fought fiercely one peaceful summer evening. It was an old old house, and of a pleasant aspect. The flush of its red brickwork was like that of a ripe old age. The ivy curled tenderly about its corners, and draped them with a beauty not their own. The river went calmly round the island, and the opulent landscape on either side smiled peacefully with many a corn-field. There is no fairer region at this day in all the fair western county. There is no place a painter might better love to study, or a wearied Londoner more rejoicingly dwell in, anywhere. And the whole scene had about it a sweet and balmy air of rest. In the trees the rooks were

cawing with afternoon solemnity. The kine stood udder-deep in grass, and switched the flies from their flanks in lazy contentment. The bells of a distant church were ringing a wedding peal. One could have closed his eyes here, and lying broadcast at the river-side, have listened to the waving boughs and the laughing river, and the humming gnats and the chattering rooks, and all the sweet and grateful sounds of country-life, until at last he might have fancied that this was the sort of peace which belonged to the world in the olden time before Care was born.

The heat of summer was in the air. The peace of summer was on the river and on the fields and on the murmuring trees. Such sounds as lived could only serve to make the general silence sweeter.

But there was trouble here, as elsewhere, after all.

There were two young fellows walking up the lane which led from the neighbouring village of Wrethdale to the western bridge. They went in silence for a while, and one of them, olive-complexioned and heavily moustached, switched viciously with his walking-stick at the ferns and foxgloves. He was a handsome young fellow, with some affectations in dress which seemed to bespeak him an artist. He wore a bronze-coloured velvet jacket, for instance, and his wide-awake hat was of the same material; he carried between a daintily gloved finger and thumb a well-blackened *meerscham*. His companion, who regarded him with a certain contempt, was by some two or three years his elder, and whilst much fairer in complexion and much slighter in build, bore a strong resemblance to him. As they walked, the younger grew more and more vicious in his cuts at the foxgloves, and the elder more and more anxious in his looks. When they reached the bridge, they paused.

'It's not a bit of use, Will,' said the younger. 'You *must* do it, and you must rely on me. I promise faithfully that I'll raise the money. I know I can raise it long enough before the time comes.'

'You didn't raise it last time, Frank,' returned the elder. 'I don't see how I am to help you.' He spoke very earnestly and with a very sympathetic voice and manner.

The other turned away angrily and answered: 'That's all nonsense. You have but to sign your name, and the thing's done. If that fellow should come down upon me, and the governor should know of it, it would break his heart.'

'But, Frank,' returned the elder, 'I had the greatest possible trouble in meeting the last, and this is even larger. I don't want to say anything hard, but I think I know you better than you know yourself. If you get out of this scrape, you'll just go quietly back to London, and be very careful for a week, and be very careless for three months afterwards. Then you'll suddenly wake up to the fact that there's another bill to meet, and that you can't meet it. I am sure I should not be able to meet it, if I should accept it and you should fail.'

Frank made no reply, but stooping, gathered a handful of loose pebbles, and dropped them one by one into the stream.

'Is there no other way?' the elder asked. 'Can't you get the man to wait?'

'Can't I get the tide to wait? Can't I persuade Nelson's Column to take a walk down Fleet Street? Look here! If I don't pay Tasker off at once, he either has me in his clutches for ever and drains me dry, once and twice and thrice and again; or he comes down here, coolly presents himself to the governor, and breaks the old man's heart. Because that's exactly what it means. You know that, Will, as well as I do.'

The other shook his head in a mournful way, as not at all disputing this unpleasant view of things.

'Well now, on the other hand,' the younger resumed, 'all you have to do is to put your name on a piece of paper, and to make yourself easy about the rest. I'm sure I'm sorry I didn't pay the other; but I give you my word of honour I will meet this. Now, old man, trust me. Give me a chance.'

'Frank,' says the elder, 'if I had the money, I would give it to you with all my heart. You ought to know that. And you ought to know what signing that bill may mean. You know your own affairs better than I can know them, a great deal better than you let me know them. Before you ask me to repose so much confidence in you, you should repose a little in me.'

'It's a shameful business,' said the other doggedly, 'and so much I have told you already. I won't humble myself by telling you more. You can help me if you like; and if you don't like, you can kill the governor.'

'That's a very happy specimen of your way of reasoning,' said Will, with a quiet scorn in his voice; 'and quite in accordance with what I've seen in you for some time past.'

Frank turned round on him fiercely.

'You're a pretty brother! A nice, kindly, trustful, amiable fellow! Well, take your way. I wash my hands of it. I have done. I have made the only appeal it was in my power to make. I find it rejected, and there's nothing for it but to go back and hang myself.' With that he threw his elbows savagely on the rail of the little bridge and stared moodily at the water.

'I wish you would use a little common-sense, Frank, and be a little reasonable,' the elder brother pleaded in a nervous way. 'You can't wash your hands of it, except by paying the debt and amending your life.'

Frank makes no answer, until the elder lays a hand upon his shoulder, with an appeal: 'Come, Frank, I don't want to speak too harshly, and you know that I'll help you all I can.'

'The fact is,' Frank replied savagely, 'that I'm a selfish, egotistical beast. You're quite right, Will, and you don't say to me half I deserve. But I do really believe that I'm honest in saying that I am a thousand times more concerned for the governor than I am for myself. I've acted like a fool and a villain; and if the punishment hit nobody but me I could bear it.'

'Frank! Frank!' exclaimed the elder, 'you confess too easily.'

'I know,' said Frank impatiently. 'You're right again. I'm a shallow good-for-nothing beast, and the only grace I have is that I can be sometimes brought to own it.'

'The worst of that is,' Will murmured inwardly, 'that you think an admission a repentance.' Then aloud: 'Don't you think, Frank, that if you

allowed me to explain all this to the governor, the thing might be honourably arranged? I don't like this underhand way of doing things. Why should you and I go about drawing and accepting bills?

'The governor shall never know it with my consent. Why should you ask me to shame myself in that way? Why need he know it? Why need he be grieved with it?'

'Will you give me your promise that you'll not wait for the bill to become due before you begin to think about meeting it?'

'By Jove! I'll do anything on earth,' the other answers. 'I'll live on bread and cheese—I'll work like ten men. I wish I could get you to believe me. I know I came down here and made professions of reform before; but this has been such a wearing grind of anxiety, that I shall never involve myself in this way again.'

'Will you do this?' said the elder. 'Will you promise to send me half the amount of the bill the week before it falls due? If you'll undertake to do that, I'll undertake to meet the bill, and you can pay me the balance afterwards. I shall have a little loose coin then.'

'Bill, you're a brick!' exclaimed the younger. 'Will I do it? Won't I do it? I tell you there's nothing in the world I wouldn't do.'

'Or couldn't do?' queried Will. 'I don't want to know what you are willing to do, but what you are able to do. Can you do it? Don't speculate. Be sure.'

'I can do it,' Frank replied; 'and I promise you that I will.'

'Remember, Frank,' said the elder with a grave and anxious face, and with his hand again on his brother's shoulder.

'And remember, Will,' said the other gaily, 'that I am not an utterly abandoned cut-throat yet. I shall have to grow a little in that direction before I can neglect a thing like this, and make you such a villainous return for all your kindness. It shan't cost you a farthing. I'm going to turn over a new leaf. I have had enough and a great deal more than enough of this business. I'll work like a slave when I get back. I'm to be B.A. in half-a-dozen years at the outside. Watch the career of this talented young artist, and see what becomes of him.'

And with that the handsome young gentleman cocked his velvet hat a little more than usual, and struck a theatrical attitude. At this the elder laughed. The two suddenly shook hands, and then without further parley crossed the bridge together, passed a swinging gate, and came upon the lawn of Island Hall.

On the lawn stood an old gentleman and a child. The child's face was turned to the newcomers, and with a joyful little screech she rushed past the old gentleman, and precipitated herself upon the younger of the brothers, and being lifted by him, hugged and kissed him most outrageously. Her caresses having been returned, the young lady struggled to get down to the lawn again, and being landed, danced round the young fellow like a fairy, clapping her hands and laughing. This young lady was some five years of age. Her sunny little face was brimming over with laughter, and as full of saucy humour as a face could be. The dimpled little hands hovered here and there restless and light as falling snowflakes;

and what with her golden hair and her rapid childish motion, she played round the object of her welcome like a very sunbeam. Pausing before him with clasped hands and an expression of sudden gravity, she announced: 'O Franty, I've tum home.'

'Now,' said Franty, leaning back on his walking-stick and smiling at her lazily, 'I should never have guessed that.'

The little damsel, susceptible to satire, explained with dignity: 'I've tum home for dood.'

'What!' asked Frank, 'not going back to Auntie any more?'

'No,' said the little damsel very gravely; 'I s'an't go back to Auntie's. But,' she added, with such a flash of head, hands, feet, and body as only feminine childhood can accomplish, 'Auntie's tummin' here.'

'Hillo!' Frank exclaimed. 'That's news.—Is that a fact, father?'

'Yes,' says the old gentleman, in a languid and even rather lackadaisical voice; 'she's here now, and has made up her mind to stay with us.'

'Ah!' said Frank, and walked across the lawn and into the house.

'It's rather a good thing,' said the old gentleman, with a voice so querulous that he seemed to be complaining of a very bad thing, 'that Frank's not at home so much now as he used to be. Poor Bertha and he don't get along well together. But as for you, Will,' he went on in the same querulous complaining voice, 'you are a sober-sided, sensible fellow as my-self, and we must do our best to bear with her crotchets, poor thing, and to make her as happy as we can.'

'Who's poor thing?' inquired the young lady.

The old gentleman laughed, and patted her shining head.

'What sharp ears these little people have, Will.'

His son smiled in answer; and the little damsel at the sight of his smiling face, clapped her hands and laughed aloud.

Frank emerged from the house, and took the child on his shoulder, and danced with her round the lawn.

'He's a good-hearted fellow,' said the father in his querulous voice, 'I wish he would be a little steadier.'

'I think he will be,' answered Will. 'We have had a very serious talk this afternoon, and he tells me he has quite made up his mind for hard work and quiet living.'

The old gentleman smiled wily and answered: 'I am very glad to hear it, Will, very glad. They tell me up there, you know, that he is extremely clever. I am no judge of art; but people who do know something about pictures, tell me he is certain to rise.'

Mr Fairholt made this statement with the voice and manner of a man who complains weakly of the meanness of a dishonourable friend.

'I was up at the Academy on the fifth of last month,' Will answered. 'As I was going in I met Spiuks, and he carried me off to Frank's picture in a most triumphant way, telling me it was one of the cleverest things of the year and safe to sell.'

'It hasn't sold?' asked his father.

'I think not,' Will responded. Then across the

## A LIFE'S ATONEMENT.

lawn: 'Frank! Has that picture of yours at the Academy sold?'

'No,' says Frank, pausing in his dance. 'But there's a noble swell after it. He's working through his agent, a fellow who always buys for him. He wants it for one-fifty, and I've priced it at two hundred. There are a lot of mean dogs who won't buy through the Secretary, but pester the painter as though he were a retail tradesman. The picture's worth the money, and I shan't let it go for less. But my noble swell is an awfully tight-fisted ruffian, and I am afraid I shall lose him.'

Mr Fairholt stood rubbing his hands together discontentedly and as though he had a fretful little quarrel with them.

'Don't take less than you think it worth,' he said. 'But two hundred pounds is a good deal of money to pay for a picture.'

'Why, bless your soul,' returned Frank, 'there are fellows who can get a thousand by slashing over a square yard of canvas with a brush like a broom. And I have put a good honest six months' work into that picture.'

Will laughed rather mischievously, and asked: 'Do you count the six weeks' flutation at Brighton in that good honest six months' work, old fellow?'

Frank grinned responsive: 'Why not? A man must keep up the artistic fervour somehow. —Mustn't he, Polly?'

Polly, seated on his shoulder and listening to the conversation, laughed on being thus appealed to, and the dance began again. The old man after looking on for a time, went into the house, and Will lit a cigar. The scent of a brown-paper fusee reaching Frank's nostrils, he suspended the dance.

'There, Polly! That's enough. Now run away and kiss Aunt Bertha.'

'What for?' asked Polly.

'You mercenary little creature! For love!'

Polly made one rose-leaf of her lips, and shook her head.

'Then for sixpence,' said Frank, taking the coin from his pocket.

Polly's countenance relaxed. She nodded, and having secured the coin, started off at a run; but paused in the doorway, and gave warning with a triumphant laugh: 'I shall turn back again.'

'Give me a weed, old fellow,' said Frank.

Will produced his case; and Frank having carefully selected his cigar and lighted it, tilted his hat, and said, whilst his gloved hand strayed amongst his curls: 'Will, if you can accept this bill to-night, I will drive over to Hetherton first thing in the morning, get it cashed at the bank, take train up to town, pay this pestilent villain immediately, and get back to-morrow evening.'

'That's impossible,' Will responds. 'You couldn't leave Hetherton before twelve, and the mid-day train from Hetherton reaches town at four-forty. I'll accept the bill all the same. How long do you purpose staying here?'

'I want to make a week of it,' Frank answers. 'The fact is,' he continued, throwing his hat on one side and straightening himself with a slight swagger, 'I want to see something more of Maud, and I want her to see something more of me. And now that the murder's out, I don't mind telling you, Will, that what I think and feel about

her has done more to tame me than even this confounded thing of Tasker's.'

There was a pained look in Will's face as he turned away, and a little quiver in his voice as he said: 'I hadn't fancied that you cared for her at all, Frank.'

'Well, one doesn't like to go about making a row over these things before they are tolerably certain,' returned Frank, dragging softly at his black moustache and smiling.

Will surveyed his cigar, and knocked off the ash with the tip of his forefinger. Then he whistled a bar or two from *Semiramide*. 'Do you mean to say that you are tolerably certain?'

'Yes,' said Frank, setting his feet apart, and throwing his walking-stick across his shoulders, so that he took an end in each hand. 'I'm not a vain man; but I think I could make any woman fall in love with me, provided always that she had no prior engagement—no "priority" attachment," as that fellow says in the *Pickwick Papers*. The fact is, you know, that a fellow's only got to be not downright ugly and not downright stupid, and he can marry any woman for the pleasure of making love to her.' Therewith the modest and ingenuous youth passed his hand carelessly through his curls, smoothed his moustache, and proceeded, his voice being pleasantly muffled by his cigar: 'I'm not talking of those bred-and-born flirts one meets in town. I'm talking of women who are worth marrying. Now you know, with such a woman, if her heart's free, you have only to care about her, and to tell her so'—

'And she drops into your mouth like an over-ripe plum. Eh?'

'Exactly.'

'I'm not of your opinion, Frank. I think a woman who is worth marrying is won in rather a different fashion.'

Frank looked down with a glance of good-humoured and amused compassion.

Will, with his straw-hat pulled over his eyes, was very closely examining his cigar when he asked: 'Have you any especial reason to think as you do about Maud?'

'Ye-es. I feel pretty safe. I feel sure she likes me, and I'm going to make a dash for it this evening. I'll either make a spoon or spoil a horn. I have to dine there, and it's time I dressed and was off. Won't you wish me luck, old fellow?'

Will, with a not over-successful attempt at a laugh, responded: 'I'll wish you a little more humility and a little more knowledge of women.'

Frank patted him on the shoulder, patron-like: 'All right, my venerable wiseacre. I shall have news for you when I come back. Do you mind telling Jack to get the dog-cart ready? Thanks.' With that the modest and ingenuous youth disappeared with a light and airy step.

Having fulfilled his commission, Will sat down on a garden-seat and smoked for a while.

'What's to be done now?' he asked himself. 'Ought I to stand on one side and let him win? Does it matter to him as much as it matters to me? I don't know what spoiling my life might mean, but I can guess one thing about Frank. If he cares for Maud as much as I do, and doesn't get her, he'll go to the bad altogether. I wonder

whether it's because he feels more intensely, or because he never controls his feelings? I can't make up my mind about anything yet. I must wait and see—I must wait and see.'

With that he strolled in a melancholy humour back to the bridge, where he dropped pebbles into the river, and was presently startled from a dismal day-dream by the passage of Frank in the dog-cart, with the groom beside him.

'Ta-ta,' shouted Frank. 'Five to one, I win!'

Will shook his head in answer. The dog-cart turned a corner of the lane. The sound of the wheels died away, and Will went on dropping pebbles in the stream, and thinking—thinking—thinking—whilst resolve grew stronger and his heart grew fainter every moment.

At last he said: 'Why should I waste my heart by dropping them one by one? Let the lot go.' With that he threw a handful of pebbles into the stream and walked, a little moodily, home.

### THE ASCENT OF THE MATTERHORN.

GREAT mountains never fail to exert a singular fascination upon those who come within the range of their influence. In early as in later times—among the barbarous as well as the civilised—this influence has manifested itself in a conspicuous manner. But it is only within comparatively recent times that the scaling of the higher mountain summits of the globe has been raised into something like the dignity of an art. What the mountaineer formerly did for the purposes of pleasure or the chase, the man of science now does in order to extend his knowledge of the forces and operations of Nature. The first ascent of this kind which attracted the attention of the scientific world was that of Mont Blanc by the Swiss naturalist M. de Saussure, in August 1787; and the narrative in which he embodied his achievement had for his contemporaries all that charm of novelty which a former generation had derived from the fictitious adventures of a Robinson Crusoe. M. de Saussure was not the first to make the ascent, which had been accomplished in the previous year by Dr Paccard and the guide Jaques Balmat. Until that time, the inhabitants of the valleys at its base believed the mountain to be both unscaled and unscalable; but since then, it has been ascended perhaps hundreds of times; and under the auspices of our modern Alpine Clubs, it has become a favourite and fashionable resort of those adventurous spirits who are fain to fill up the intervals of fox-hunting at home in winter, by the more hazardous sport of Alpine climbing abroad in summer. But while 'the monarch of mountains' was thus more than ninety years ago subdued by the foot of man, and while scores of his subordinate peaks have yielded to the same irrepressible power since, there was one other of the Pennine Alps which for long continued to wear inviolate his crown of inaccessibility. This was Mont Cervin, or the Matterhorn. Numerous attempts had been made upon it by the bravest and most skilful of our mountaineers, scientific and otherwise; but each and every attempt was baffled till in 1865 its ascent was accomplished by a little party of hardy English climbers. The narrative of that ascent is now before us, as told by one of its leaders, Mr Edward Whymper—(*The Ascent of*

*the Matterhorn*, by Edward Whymper. London: John Murray, 1880.) The book is not a scientific one. If readers go to it in the expectation of finding the natural phenomena of the Alps discussed as has been done by Professor Forbes and Professor Tyndall, they will be disappointed. They will find nothing here about the competing theories as to the structure and movements of glaciers, or much that is new even as to the superficial geology or the external aspects of the great Alpine range; but they will find instead a tale of stirring adventure, of hardy daring, of well-earned success, told with much picturesqueness and descriptive power, accompanied by pictorial illustrations that place the reader all but face to face with the scenes they portray. The ascent of the Matterhorn is not the only feat of climbing engrossed in the narrative; and if the literary effect and continuity of the main exploit is somewhat marred by the introduction of the episodes which detail the minor adventures, yet by many readers this may be regarded rather as a relief than otherwise; and it must be said, even with these breaks and disjointings, that no page of the book is devoid of interest.

In 1861, Mr Whymper made a successful ascent of Mont Pelvoux, one of the Dauphiné Alps; and of the other summits which yet remained virgin, two especially excited his admiration—namely the Weiss-horn and the Matterhorn. Subsequently, however, rumours were afloat that the former had been conquered; and the climber thereupon directed his attention exclusively to the latter. The Matterhorn, it may be here mentioned, is a peak of the Pennine Alps, nearly fifteen thousand feet high, situated between Switzerland and Italy, about forty miles north-east of Mont Blanc, and twelve miles west of Monte Rosa. Previous to 1861, numerous attempts had been made to scale the mountain; but no one had managed to reach a greater altitude than thirteen thousand feet, the remaining two thousand feet being generally acknowledged as inaccessible. The peak of the mountain, says Mr Whymper, 'rises abruptly, by a series of cliffs which may properly be termed precipices, a clear five thousand feet above the glaciers which surround its base. There seemed to be a cordon drawn around it, up to which one might go, but no farther. Within that invisible line, gins and affits were supposed to exist. The superstitious natives in the surrounding valleys spoke of a ruined city on its summit wherein the spirits dwelt; and if you laughed, they gravely shook their heads; told you to look yourself to see the castles and the walls; and warned one against a rash approach, lest the infuriate demons from their impregnable heights might hurl down vengeance for one's derision.' In appearance the Matterhorn is always imposing; and in regard to the impression it makes upon spectators, it stands, says Mr Whymper, 'almost alone among mountains. It has no rival in the Alps, and but few in the world.' Judging of the formidable-looking peak by the drawings in the book, it looks like one of the Egyptian pyramids set on a mountain ten thousand feet in height—as steep and as forbidding as any pyramid, but without the steps which in the latter assist ascent, and with great precipices of ice and snow girdling its base.

Mr Whymper's first scramble on the Matterhorn

was made from the Breil or east side, and he was accompanied by one guide only. He only reached what is called 'the Chimney,' a height of twelve thousand six hundred and fifty feet, when his guide refused to accompany him farther, and he had to return. He made other four attempts in 1862, one in 1863, and two in 1865—eight in all; the eighth, which was successful, being by the Zermatt or northern route. In one of his attempts in 1862, he had the hardihood to go alone, and even attained a height of thirteen thousand four hundred feet. But his hardihood nearly cost him his life. 'Time sped away unregarded,' and after reaching an altitude of twelve thousand feet, where he had formerly left a tent, he had allowed night to come upon him. 'The sun was setting, and its rosy rays, blending with the sunny blue, had thrown a pale pure violet far as the eye could see; the valleys were drowned in purple gloom, whilst the summits shone with unnatural brightness. . . . By-and-by, the moon as it rose brought the hills again into sight, and by a judicious repression of detail, rendered the view yet more magnificent. Something in the south hung like a great glow-worm in the air; it was too large for a star, and too shady for a meteor; and it was long before I could realise the incredible fact that it was the moonlight glittering on the great snow-slope on the north side of Monte Viso, at a distance, as the crow flies, of ninety-eight miles.' He stayed in the tent all night, and in the morning proceeded yet higher. He reached the ~~Saint~~ Tower, a huge precipitous rock, standing up like the battlements of a castle. Without assistance, he could not proceed farther, and returned. In the course of his descent, he had to turn the angle of a fearful cliff, in the hardened snow of which it was necessary to cut steps for his passage. In attempting to pass this corner he slipped and fell. 'The slope was steep on which this took place, and was at the top of a gully that led down through two subordinate buttresses towards the Glacier du Lion, which was just seen, a thousand feet below.' In his fall he was dashed now upon rocks, now over ice, gathering momentum as he descended. Fortunately, he never lost his senses; and the last bound, which sent him spinning through the air, landed him on his left side among rocks, which momentarily retarded his progress; and a few frantic catches brought him to a halt in the neck of the gully and on the verge of the precipice. 'Bâton, hat, and veil,' he says, 'skimmed by and disappeared; and the crash of the rocks—which I had started—as they fell on to the glacier, told how narrow had been the escape from utter destruction. As it was, I fell nearly two hundred feet in seven or eight bounds. Ten feet more would have taken me in one gigantic leap of eight hundred feet on to the glacier below.' He was terribly cut and bruised, the blood gushing from two gashes in the head; but he managed to scramble to a place of safety, and then fainted away.

Readers of Dr Livingstone's Travels will remember a passage in which that intrepid missionary gives an analysis of his feelings in the few terrible moments of consciousness which succeeded his being struck down by a lion, and when it seemed to him that death was inevitable. Mr Whymper gives a similar analysis of his sensa-

tions at the time of the above accident. He says: 'I was perfectly conscious of what was happening, and felt each blow; but like a patient under chloroform, experienced no pain. Each blow was naturally more severe than that which preceded it, and I distinctly remember thinking: "Well, if the next is harder still, that will be the end." Like persons who have been rescued from drowning, I remember that the recollection of a multitude of things rushed through my head, many of them trivialities or absurdities which had been forgotten long before; and more remarkable, this bounding through space did not feel disagreeable. But I think that in no very great distance more, consciousness as well as sensation would have been lost; and upon that I base my belief, improbable as it seems, that death by a fall from a great height is as painless an end as can be experienced.'

Mr Whymper's eighth and successful attempt on the Matterhorn was made in July 1865, in company of Lord Francis Douglas, Mr Hudson, Mr Hadow, and three guides. On the first day, they did not ascend to a great height; and on the second day they resumed their journey with daylight, as they were anxious to outstrip a party of Italians who had set out before them by a different route. Difficulty after difficulty was surmounted. 'The higher we rose, the more intense became the excitement. What if we should be beaten at the last moment? The slope eased off; at length we could be detached (from the rope which bound the party together), and Croz and I dashing away, ran a neck-and-neck race, which ended in a dead-heat. At 1.40 P.M. the world was at our feet, and the Matterhorn was conquered. Hurrah!' They had beaten the party of Italians, whom they saw on the south-west ridge, twelve hundred and fifty feet below, and who did not prosecute the ascent farther. For an hour the successful climbers revelled in the scene which lay at their feet. 'There were black and gloomy forests, bright and cheerful meadows; bounding waterfalls and tranquil lakes; fertile lands and savage wastes; sunny plains and frigid plateaux. There were the most rugged forms and the most graceful outlines; low perpendicular cliffs and gentle undulating slopes; rocky mountains and snowy mountains, sombre and solemn, or glittering and white, with walls, turrets, pinnacles, pyramids, domes, cones, and spires! There was every combination that the world can give, and every contrast that the heart could desire.'

Alas! their naturally triumphant feeling of pleasure was but short-lived. They had commenced their descent, again tied together with ropes. Croz, a most accomplished guide and a brave fellow, went first; Hadow, second; Hudson, as an experienced mountaineer, and reckoned as good as a guide, third; Lord F. Douglas, fourth; followed by Mr Whymper between the two remaining guides, named Jangwalder, father and son. They were commencing the difficult part of the descent, and Croz was cutting steps in the ice for the feet of Mr Hadow, who was immediately behind him. 'A few minutes later, a sharp-eyed lad ran into the Monte Rosa Hotel, saying that he had seen an avalanche fall from the summit of the Matterhorn on to the Matterhorn-gletscher. The boy was reproved for telling idle stories; he was right, nevertheless, and this was

what he saw. Michel Croz had laid aside his axe, and in order to give Mr Hadow greater security, was taking hold of his legs, and putting his feet one by one into their proper positions. . . . At this moment, Mr Hadow slipped, fell against him, and knocked him over. I heard one startled exclamation from Croz, then saw him and Mr Hadow flying downwards; in another moment Hudson was dragged from his steps, and Lord F. Douglas immediately after him. All this was the work of a moment. Immediately we heard Croz's exclamation, Old Peter and I planted ourselves as firmly as the rocks would permit; the rope was taut between us, and the jerk came off us both as one man. We held; but the rope broke midway between Jangwalder and Lord Francis Douglas. For a few seconds we saw our unfortunate companions sliding downwards on their backs, and spreading out their hands, endeavouring to save themselves. They passed from our sight uninjured, disappeared one by one, and fell from precipice to precipice on to the Matterhorn-gletscher below, a distance of nearly four thousand feet in height. From the moment the rope broke, it was impossible to help them. So perished our comrades!

The bodies of three of the men who thus miserably perished were afterwards recovered; but that of Lord Francis Douglas was never again seen. It is a melancholy ending to an otherwise delightful book, and may well excite a feeling of surprise that so many brave and useful men can thus be found year by year hazarding their lives for what is in many cases no higher purpose than that of pleasure or sport. The death of Lord Francis Douglas and his unfortunate companions formed the subject of much unfavourable comment at the time both in this country and on the continent; yet the fashion of Alpine climbing is in no whit abated, and the terrible cliffs of the Matterhorn have since then had still other victims. When a high scientific or other worthy object forms the incentive to such hazardous undertakings, the deed becomes heroic, whatever the issue; but when pursued—as is too frequently the case—without any adequate end, it resolves itself into something that is almost suicidal in its reckless tampering with life. This is acknowledged by Mr Whymper. Many persons, he says, get upon the Matterhorn who ought not to be on a mountain at all; and 'if the number of accidents continues to increase at the present rate, it will ere long not be easy to find a place of interment in the English churchyard at Zermatt.'

It only remains to add that the volume is adorned by wood-engravings in the highest style of the art.

## MY WIFE'S INHERITANCE

### IN THREE CHAPTERS.

#### CHAPTER II.—HOW IT WAS LOST.

AFTER the incidents mentioned in the last chapter, nothing particular occurred for more than a month. I had several conversations with Mr Russel; but the will was never brought out again. I also cautiously sounded Ellen as to her cousin Charles; but she could tell me very little about him, except that he was the son of her uncle David, and on

his father's death—which occurred when Charles was about fourteen years of age—his uncle took him to his office and home. He was a fine bright clever lad; but when he was about eighteen, he seemed to fall into evil courses. His uncle bore with his irregularities for some time, but at length could do so no longer, and therefore requested him to find apartments for himself in some other quarter of the town. 'From this time,' continued she, 'I saw very little of him, although he still continued his attendance at the office. It appears however, that his conduct, instead of getting better, became worse; and shortly afterwards I heard that he had been sent away altogether. I never rightly understood the exact cause of this, as dear uncle would never talk about it, and was always angry when it was mentioned. I believe, however, it was some forgery, which would have brought disgrace on the office had not uncle paid a considerable sum of money to hush it up. 'That,' said Ellen in conclusion, 'is now four years ago; and since then I have heard nothing of him, except that he is living in London; but how I have no idea.'

This was all I could learn of the nephew at that time, though I had reason to know more of him afterwards.

My readers may perhaps wonder why Ellen and I did not get married forthwith, as everybody seemed in favour of it; but Mr Russel's state gave us great anxiety, and we certainly could not think of our own happiness while his health was so precarious. It would have been really unkind to have taken her from him just at that time, and my professional duties obliged me to live in the village. We were now in the middle of March, and all hoped that as spring advanced the old gentleman would rally; but alas! our hopes were doomed to disappointment. He gradually became weaker; and by the end of April it was plain to me that his end was approaching. I now hardly left the Willows, except in the daytime, just to run round to my other patients. We had engaged a nurse to wait upon him at night, Ellen performing that service during the day. For the last few nights I slept in a chair in a small adjoining dressing-room. At length it seemed to me that the last night had come, and Ellen and I remained in anxious expectancy together in the same little room. Mr Russel was asleep, but we gave strict orders to the nurse to call us when he awoke. We waited till daylight, but the call never came. He had passed calmly and peacefully away—the loving heart and once active brain were for ever at rest.

According to his request, we buried him in the quiet country churchyard, in a plain and simple manner. There were very few mourners. Ellen and myself, together with a Mr Benson from Kinton, occupied one coach; and Mrs Watkins and Miss Leclerc another. At the grave, however, the funeral cortège was joined by a tall dark young man, and Ellen whispered to me that it was her cousin Charles. He was dressed in complete black, and behaved in a proper and becoming manner. When all was over, and we had

returned to the house, I was much surprised to see him also enter. His temerity and coolness astonished me, as certainly he dared not have done so during his uncle's lifetime. As, however, he really belonged to the family, and as the will was about to be read, in which I knew he was mentioned, I told Ellen to speak to him, and invite him to stay. 'Perhaps,' I said to myself, 'his presence here may be taken as a token of repentance.' It did not occur to me just then that it was somewhat strange that he, without intimation, should have known the exact day and hour of the funeral.

Leaving them all seated in the drawing-room, I went up-stairs, opened the secret receptacle and brought out the will. It was in the long envelope, sealed as I had sealed it, and endorsed: 'The will of Charles Russel, February 2, 1870.' Returning, I passed it over to Mr Benson, requesting him, as an old friend of the family, to break the seal and read it. He took it, and holding it up in full view, asked if we were all willing that he should do so. As no one objected, he opened the envelope and drew it forth. I daresay it was an anxious moment for some there—Ellen, Charles, Mrs Watkins, and Miss Leclerc; but as for me, knowing already the contents, I was quite calm. 'I, CHARLES RUSSEL, of the Willows, Cottam,' began Mr Benson in a steady voice, 'declare this to be my last will and testament. I bequeath to Elizabeth Watkins, my housekeeper, the sum of one hundred pounds. I bequeath to Jeannette Leclerc, the daughter of my niece, the sum of fifty pounds. I also bequeath to my niece, Ellen Saunders, the sum of two hundred and fifty pounds.'—

'What!' I interrupted. 'Read that again, please.'

Mr Benson, with a look of surprise, did so, and went on: 'And as to all the rest, residue, and remainder of my real and personal estate, I devise and bequeath the same to my nephew, Charles Russel, his heirs, executors, administrators, and assigns, absolutely and for ever. And I hereby appoint my said nephew sole executor of this my will. In witness whereof I have hereunder set my hand, this 2d day of February 1870.'

I was thunder-struck. Again I requested him to repeat; and once more it came out clear and plain, that with the exception of the legacies named, all the property was left to Charles, and he also was left sole executor. I was dumb-founded, and at last exclaimed: 'That cannot be the true will. I have seen another, the real will, and it is just the reverse of that. Let me see it myself'—

'Not so fast, if you please,' interposed Charles. 'It seems that I am sole executor; that will therefore now belong to me, and I do not intend that you shall have it in your hands.'

'But,' I contended, 'that cannot be the real will, as I have seen another.'

'Then perhaps you will produce that other which you pretend you have seen. You cannot, of course, because there is no other; and this gentleman'—turning to Mr Benson—'will bear witness that the seal was unbroken. Perhaps you know Mr Russel's seal, sir, and handwriting?'

'Yes,' replied Mr Benson; 'as it happens, I know both as I have had many dealings with him.'

'Then what is your opinion of the genuineness

of the will which this gentleman'—with a sneer towards me—'seems to question?'

'Oh, as to that, I cannot see the shadow of a doubt. At the same time, knowing what I do'—with a significant look at Charles—'I confess I am somewhat surprised.'

'Indeed! Well, I don't see anything surprising in it. My uncle probably discovered that I was innocent of the crime laid to my charge, and took this method of making amends; and I must say it was very handsome of him. Besides, I am the son of his brother, and of the same name as himself, and he no doubt wished to keep everything in the family.'

'All this sounded very plausible; but it was to me only the more aggravating, as I knew perfectly well that his uncle was as bitter against him at the end as ever he was, and I said so. At this Charles lost his temper, or pretended to do so, and exclaimed: 'Look here, sir; I don't know who you are, and I don't want to know. I only know that you are not one of the family, nor is your name mentioned in the will. It seems to me that you have meddled in this affair long enough. Let me remind you that this house is now mine—mine, sir; mark that; and I must request you to take your departure at once. If uncle's will has not been made as, I daresay, you would have made it, and you think you can upset it, I can only say, you know your course; the law is equally open to you as to me. I tell you plainly I shall take the will to a solicitor at Kinton to-morrow and get it proved at once; and you can take whatever steps may seem to you fitting. At present I decline to hold any further communication with you.'

I was almost speechless, as much with rage at the cool way in which I was turned out as at the disappointment I felt both for Ellen and myself; but, seeing nothing could be done, I left the room, beckoning Ellen to follow me.

'This is a severe blow,' I said when we were alone; 'and I am very sorry for you.'

'Don't say that dear; I too am sorry; for it is a severe and totally unexpected blow; so inexplicable too. But my sorrow is more for you than myself. You will have to take me now as an almost portionless girl, instead of the rich heiress you were led to expect.'

'Oh, my darling, you know I shall only be too pleased to have you, rich or poor; but do you not think it would be well for you to leave this house and take apartments in the village, until I can arrange for our marriage? It is not likely you will be very comfortable here.'

'Nay; I do not quite see the necessity for that. Charles will not turn me out; he was never unkind, though wild and, I am afraid, wicked. But dear, is it not too soon after uncle's death to talk of our marriage?'

'I know what you mean, Ellen; you think "What will the world say?" Well, under ordinary circumstances, I should not urge it; but these are not ordinary circumstances. You have no home here but on sufferance, and so the sooner you come to mine the better.'

'Well, we will talk of that to-morrow, when we have had a little time to think.'

I bade her good-night, for in truth I wanted a little time to think. That Mr Russel had really made another will totally altering the disposal of

his property, I could not believe; his whole conduct and conversation forbade it, and yet how else explain the will as it was read that afternoon? To be sure he might have done so, without saying anything to me about it; but I could not bring myself to think so.

When I retired to rest, I fell asleep, no nearer a solution. The last thing I remember was that I determined to go to Kinton the first thing in the morning and consult Mr Sparks, a legal friend of mine. This resolution I duly carried into effect, and luckily found him at his office and disengaged. After the usual greetings and a little ordinary conversation, I opened the subject uppermost in my mind; and that he might clearly understand it, I gave a detailed account of my connection with the Russel family. I recounted the old man's affection for his niece, and the confidence he reposed in me; and then narrated the incidents of the interview in which Mr Russel shewed me the will and its contents. I then dwelt upon the death, funeral, and reading of the will; the contents of which were so totally different from what I had expected. This done, I asked his advice and opinion.

'As to my opinion,' he said, 'I must have time to consider; but my advice is, that you leave the matter in my hands for a few days, and I will see his solicitor and examine the will myself. I suppose there is no question of the validity of the signature? Who were the witnesses?'

'Their names are James Dobson and William Green.'

'Ah! Well, come to me in three days, and bring them with you; or if they cannot come, bring a specimen of their handwriting. By-the-by, who were the witnesses of the will which you read in the presence of the old gentleman?'

'Unfortunately, I cannot remember.'

'That's a pity; still, it does not matter much. The chances are that Mr Russel had the same men, and you can easily find out if they witnessed his signature at two different times; or if not, Cottam is not such a large place that it would be difficult to find out if any other two men ever acted as witnesses.'

'Then you think two wills were really made?'

'Why, what else can I think? You yourself saw one, and another was produced.'

'But could not the one I saw be altered?'

'Ah! that is an exceedingly difficult matter, and almost certain to be detected. Besides, who was to do it? You say it was kept in a secret receptacle, known only to Mr Russel and yourself; so that it really does seem to me on the face of it that he changed his mind, and made another will some time between his conversation with you and his death. The old will he would doubtless destroy at the same time. But leave the matter in my hands, and I will look into it.'

As this was all that could be done, I took my leave, and returned to Cottam. The next day I sought out Dobson and Green; and as they could not go to Kinton, I asked them to give me a specimen of their usual signature. They both remembered witnessing Mr Russel's signature to a paper; but neither had done so more than once. With this information I waited upon Mr Sparks at the time appointed. He was ready to receive me, and entered upon the matter at once.

'I have seen the will,' he said, 'and I am bound

to say it seems correct in every particular—not a sign of an erasure or alteration in any part. Everything is written in the clear concise style for which Mr Russel was so noted. We lawyers of Kinton have had many opportunities of seeing wills made by the same hand, and I for one have no doubt that the one shewn me is the genuine work of Mr Russel. Whether it was made before or after the one you say you saw, is another question, which can only be decided by the production of—what I may style—*your* will, if still in existence. Until you can produce that, I see no help for it but to let things take their course.'

'But can we not oppose the proving of the will?' I said with some heat, not being pleased at the idea of giving up the fight so easily.

'My dear sir, I should only be too happy to enter a *caveat* for you, or rather in the name of Miss Saunders, for you can have no standing in the matter, not being of kin or a legatee; but what should we gain unless we can support it in a court of law? and I confess at present I see no grounds to act upon. We cannot say on account of undue influence, when, by your own shewing, all the influence, if any, was on the other side. Nor can we bring evidence to prove that Mr Russel was incapable of making a will; the very clearness and precision of it prove that he was.'

'But,' I still persisted, 'what do you make of the will which I read with Mr Russel's sanction and in his presence?'

'Well, in truth I cannot make anything of it. Produce it, and I daresay I shall do better. But I'll tell you what I think an opposing counsel would say. He would first say that doubtless Mr Russel altered his mind, made another will, and put it in the desk without telling you. Or, he might suggest that you read it after dinner, possibly after sundry glasses of wine, and that, in fact, you *misread* it, reversing the names, the "wish being father to the thought."

'Then is there no side on which we can attack it?'

'No; I am afraid not; and I am too much your friend to advise you to take proceedings in law with no better ground than you have. We might perhaps say that the purport of the will is against the weight of evidence as to his intentions; but what proof have we that it is so? Principally his conversations with you; and it would certainly be pointed out that your evidence could hardly be disinterested, as it is well known that you are engaged to the niece, the other devisee. Besides, a man's intentions are very difficult to gauge; what he intends to-day, he may *not* intend to-morrow. No; my friend. This plea, as against a will so properly drawn up and executed as this is, would count as absolutely nothing. Moreover, it is counterbalanced by the plea set up by the nephew, that most probably his uncle, when looking over his papers, and finding that said nephew was not so guilty as was thought, had taken this means of making amends. Again, his nephew bearing the same name as himself, he may have wished to perpetuate it in a much more effectual manner than would be done by leaving his property to a niece, who was about to marry an alien to his blood. I have more than once known such considerations have much weight.'

Plausible as all this sounded, I neither could nor would believe it, although it was evident that

Mr Sparks' faith in *my* will, as he called it, was very considerably shaken. However, seeing no help for it, I was obliged to submit; and this is how my wife's inheritance was lost.

### THE OYSTER.

THE life of the oyster, usually pictured as one of utter helplessness and unbroken seclusion, is by no means spent in unvarying repose. In the spring of the year, when all Nature is full of tender love and restless activity, the mother-oyster also is visited by the ruling passion, 'the icy bosom feels the sacred fire,' and soon afterwards a large quantity of milk-white fluid, which the microscope shews us to consist of almost invisible eggs, is found to have been generated in the animal. Unlike most marine creatures, however, the oyster does not abandon her eggs and leave them to the mercy of winds and waves; for the eggs are retained in their earlier stages within the parent-shell, and are hatched within the sheltering folds of her own body. By the opening of the shell, a dense mist is spread all about in the water, and the young brood scatters far and wide.

Upon their first appearance in their new career—thrown as it were upon their own resources, these tiny atoms of ocean life are all life and motion, flitting about in the sea as gaily as the butterfly roams from flower to flower. They are odd little cherubs, consisting, like the angels of the old masters, of nothing but a couple of wing-like lobes on both sides of a mouth and body of as yet exceedingly diminutive size. The wings, fashioned to rudimentary shells, are covered on the surface with countless minute microscopic hair-like processes called *cilia*, which move incessantly up and down, and thus enable the little creature to roam at will. After a period of perpetual joy and vivacity, those which have escaped their thousand voracious enemies finally settle down upon some suitable resting-place; the romance of their lives is at an end; they become steady domesticated oysters. When the brood start from their mother's safe home they number nearly a million; before they can find a new habitation, it has been calculated that at least nine-tenths of their number have perished.

After they have attached themselves to some permanent resting-place, on what is called a good 'spatting' ground, the little wings, now useless, gradually dwindle and shrink, until they disappear like the tail of the tadpole when it changes into the full-grown frog. Then they begin to grow slowly, from the size of a pin's head at two weeks to that of a pea at three months; when they are a year old they are perhaps as large as a lady's watch; and at the age of five years they are in their prime. The shell remains frail and tender until they attain the size of a crown; but is hard and complete when they become fit for the table, at their fourth year of life. If they should escape the gluttony of

man, or the wiles of certain marine enemies which we shall presently describe, they die at the appointed time, leaving their shell, thickened by old age and adorned with rings, which shew their years like the rings of a tree, to serve as a monument for times to come.

When looking at the rough shell and the shapeless mass within, we little suspect how beautiful is the structure of the animal, and at how many countless points it is susceptible to influences from the outer world. But if we put an oyster into a vivarium, and then aid our feeble sight by the object-glass of the microscope, we are struck at once by the countless tiny hairs or cilia which now are seen to vibrate incessantly on the two fringing leaflets or gills. It has its nervous system too, very simple as far as we know; a 'mantle,' in whose folds its young are so tenderly kept for a long time; and the heart itself, with its two chambers and its gentle pulsations, shewing clearly that the oyster feels and enjoys, though it may have but obscure sensibilities and limited instincts. Then there are other portions of its frame which, since we now know that nothing in created beings is the result of chance, we may safely assume to be symbols of organs more fully developed in higher animals—anticipations, it may be, of limbs and senses given to other creations, and, for aught we know to the contrary, badges of the relationship which exists between these lower and despised beings and man himself in all his sublime strength and beauty.

The oyster is not visibly endowed with the senses of higher forms, save perhaps with a low and diffuse sense of touch, and with that of hearing. The incessant motion of the cilia guide us to the belief that the animal never ceases its efforts to attract food within its domain. Like many other lower forms of animal life, the oyster may be a voracious feeder! There is no outward eye perceptible, as, in fact, there is no head to which it might lend light in its dark home; and yet the oyster is exquisitely sensitive to every change of light, and finds in this susceptibility at least one means of protecting itself against an enemy. The ear is, on the contrary, very fully developed, a strangely curious organ, consisting mainly of a number of diminutive grains shut up in a transparent prison, and there dancing in perpetual motion, which changes with every sound that strikes upon the outer walls.

The question has often been raised why this delicious mollusc should not be eaten all the year round. The prejudice, however, which forbids it during the months which have no letter R in their names—

Those four sad months, wherein is mute  
That one mysterious letter that has power  
To call the oyster from the vasty deep—

is not altogether unfounded. In May and June they generally spawn, and then their life-blood is essentially changed, for the benefit of their posterity, and their own flesh is lean and unpalatable. Besides, however productive they may be, a conscientious lover of the mollusc will hardly reconcile himself to the barbarous waste of swallowing, with each living parent, a million of

offspring. Hence in England they are rarely brought to market before the first days of August, when the 'common oysters' from Colchester and Faversham appear gradually; but the 'melting natives' are not seen before the beginning of October, reach their meridian of perfection at Christmas, and disappear again towards the end of April.

In the remaining months, however, they throng the markets of the world, and are 'the only meat which men eat alive and yet account it not cruelty,' as old Fuller says quaintly. 'For this is their great merit, that one may eat of them to-day, to-morrow, and for ever, and as many as one wants, and yet their presence hardly makes itself felt; while they gratify the palate, quiet the excitement of certain nerves which we call hunger, and leave no feeling of satiety, no reproach, no remorse for the following days.' The true way to eat them, profitably to taste, health, and enjoyment, is of course to eat them raw and without condiment; for vinegar, pepper, or lemon-juice all spoil the natural flavour of the bivalve. The only good dressing is its own gravy, which is not sea-water, as many fancy, but the life-blood of the mollusc, which it sheds when the shell is forced open. If dressings are not allowed, some drink to accompany the oyster on its way, is generally considered indispensable. Strong wines and liquors should be eschewed; these beverages simply pickle the oyster at once, render it indigestible, and deprive it of its best qualities as nutritious food. Lighter French wines are less objectionable; but porter and ale, and, better still, half-and-half, are considered the true liquid accompaniments of this incomparable delicacy.

Natural beds and banks of oysters are found in all the seas of the temperate and torrid zones, now stretching out miles upon miles in all directions, and now rising so high that ships are wrecked on their crests. And thus it has been apparently from time immemorial, for gigantic structures, consisting of fossil oysters, are found in many places. In Berkshire, a colony of oyster shells covers more than six acres; in the states of Massachusetts and Georgia, enormous breakwaters are formed between the firm land and the hungry ocean—ramparts twelve to fifteen feet high; the lower layers of coarse fossil, but the upper strata alive. On the west coast of the American continent, as, for example, on the Chilean seaboard, vast surfaces are covered with fossil oysters, which have been raised by volcanic and earthquake action, and now tower to the height of sixty feet or more for thirty miles at a stretch.

Among living oysters, however, there is as great difference as among the races of men. Those of the United States are generally acknowledged to surpass all others in size and luscious flavour, and even English travellers aver that they are superior to their own famous Whitstables. Next to the American come undoubtedly the English oysters, of which there are many varieties, the best growing on submarine-rocks, an inferior kind on sandbanks, and the coarsest on muddy bottoms. Scotland boasts of her Orkney oysters, but is even more justly proud of her 'Pandores,' so called because they are found near the salt-pans in the neighbourhood of historic Prestonpans, and caught, it used to be said, by a bit of magic. The fishing crews kept up while

the dredging went on, a wild monotonous chant, to which they ascribed great virtue, and sang:

'The herring loves the merry moonlight,  
The mackerel loves the wind;  
But the oyster loves the dredger's song,  
For he comes of a gentler kind.'

It may be safely said that wherever the oyster appears in sufficient quantities, human beings are found ready to consume them as fast as they can be procured; but the poor unsuspecting mollusc has enemies near home, in its own native element, and close upon its borders. The arch-enemy is the sleepy, stupid-looking star-fish, which eats them as spat, or even when grown to a considerable size. Often at the very time when the sanguine fisherman gets ready to reap a rich harvest from a well-stocked oyster-bank, he finds, upon coming to the grounds, that the foe has been there before him, and millions of star-fish have settled down, like a flock of wild-pigeons in a field of wheat. Generally, they prefer the spat or very young oysters, which they take whole into their capacious mouths, and there digest slowly. But how does a soft and tender creature like the star-fish manage to get at the full-grown mollusc in its impregnable fortress? The ancients had a story that they watched it till they found it incautiously yawning, and then slyly slipped their greedy fingers between the valves to keep them open, while they devoured the contents. Poetically rendered, the story runs thus:

The prickly star creeps on with fell deceit  
To force the oyster from its close retreat;  
When gaping lids a widened void display,  
The watchful star thrusts in a pointed ray,  
And of its treasures robs the rifled case,  
And empty shells the sandy hillocks grace.

This is of course a mere fable, as the soft pulpy rays of the star-fish would be squeezed off in an instant. Its murderous assault is far more curious. The first step in the process is for the enemy to close upon its prey, folding its slimy arms tightly over it, so as to hold itself in the proper position. Then it applies its mouth closely to the victim, and as it cannot, by any artifice of its own, put the oyster into its stomach, it deliberately proceeds to put its stomach into the oyster! It begins slowly but steadily to push out this organ through the mouth—probably, as suggested by some naturalists, emitting some acrid fluid, which paralyses resisting power—and to wrap the oyster in the folds of the capacious bag. Patience always does its work, and in due time the hapless native opens its shell and surrenders the succulent contents to the devourer.

Another enemy shews, if less originality, at least equal perseverance. This is the whelk, which although endowed with very slender means of locomotion, appears in vast multitudes when least expected on the oyster-bed which it deems ready for use. It assails the shell boldly from above, and with marvellous patience drills, by means of its sharp tongue, provided with row upon row of flinty teeth, a hole in the upper valve, by which it gets at last fairly inside, and then enjoys the dainty food! Mussels come by myriads when young, and cover the luckless oyster with a fine ropy texture, which catches mud and sand, and finally smothers them. Even

the elements combine against the helpless creature; heavy gales of wind at times roll them up in ridges several feet deep, when mud and seaweeds settle on them and choke them speedily; or frost and snow and ice kill large numbers when they are not safely sheltered at a depth of at least three or four feet of water.

All the voracity of man, however, and all the persecution of enemies do not destroy enough oysters annually to prevent them from forming gigantic deposits in various parts of the globe. For if left to themselves, oysters, as we have already said, attain a considerable age; though the exact number of their years has not yet been fully ascertained. The expert fisherman, it is true, can tell at a glance and to a nicety the precise age of his flock. He examines the successive layers on the upper shell, technically called 'shoots;' and as each of them, overlapping the lower, marks a certain period of growth, he thus determines the age of the inhabitant. These layers, it seems, are regular, and laid in even succession one upon the other, until the oyster attains its maturity, which is generally fixed at seven or eight years; but after that time they become irregular, are recklessly piled upon each other, and make the shell look bulky and ill-shapen. As some molluscs in tropical seas have been found with shells nine inches thick and of enormous size, it is fair to presume that the oyster, when left to its natural changes and unmolested, may reach a patriarchal age and even outlive that of man.

### ODD WAYS OF PUTTING THINGS.

PUTTING things in an odd way is the vocation of professional wits and humorists; but they are not permitted at all times to monopolise the privilege, as we shall proceed to shew.

Mr Naismyth, a celebrated Edinburgh dentist, finding himself inconvenienced by the noise made by the students of the Free Church College, wrote to request that they would be more moderate in their applause, or find some other way of expressing it than stamping upon the floor. Dr Chalmers the well-known divine laid the dentist's complaint before the offenders, and begged them to avoid giving cause for its repetition, saying he should be sorry indeed to give offence to a gentleman so much in the mouths of the public.

When President of the United States, Abraham Lincoln was inclined to a rough-and-ready style of argument.

'It is a disgrace to the country,' said a disgusted government clerk, 'that such a boor should be President!' What made him say so was this. He had asked the President to give a brother, who had been honourably discharged from the army, a place in the Civil Service. 'Let me see,' said Lincoln, 'I believe you yourself are a clerk in one of the departments?' 'Yes, sir,' said the applicant; 'I am in the Treasury Department.' 'I thought so,' continued the President. 'And your father holds an office in Washington, does he not?' 'Yes, sir; he is the chief of a bureau in the War Department,' replied the office beggar, beginning to feel rather uncomfortable. 'Is there any other member of your family holding office under the

government?' was the next query, answered with: 'Yes, sir; I have a younger brother in the Interior Department.' Whereupon Lincoln put him out of his misery by saying: 'Well, then, all I have to say to you is that there are too many hogs, and too little fodder!'

When Naples was ruled by King Bomba, his majesty one day paid a visit to the ship of an English commodore, lying in the bay. While the commodore was receiving his royal visitor on the quarter-deck, a member of the Neapolitan suite, cruising about amidships, mistook a wind-sail for a pillar, and leaning against it, suddenly went below head foremost. The only witness of the accident, an old tar, thereupon made for the quarter-deck, and having saluted, said: 'I beg pardon, commodore, but one of them ere kings has fell down the hatchway!'

The father of a Virginian girl suggesting to his intended son-in-law the advisability of his settling a sum of money upon the lady, the ardent lover, unprepared to meet such a demand, coolly replied: 'It is not my purpose to purchase a wife. When I desire to do so, I shall go to the cheapest market—Africa.' In an untenable position it is occasionally well to assume the rôle of injured innocence. An Arbroath man, over-fond of a wee drop, having beaten his wife at night, and forgotten all about the domestic difference by the morning, looked at her damaged face, and anxiously exclaimed: 'Gudeness preserve us a'! lassie, whaur hae ye been?' Enlightened as to his part in the matter, he cried, as though he were the aggrieved one: 'O dear, O dear! it's an awfu' thing ye winna keep oot o' hairn's way!' Another injured innocent, quite equal to the occasion, was Silbermann, gamekeeper to the father of Louis-Philippe. Carpeted by his master for selling his game to a butcher, he boldly denied doing so. 'No,' said the master, 'you don't sell it; but you exchange it for mutton.' 'That's true,' quoth the unabashed keeper. 'You said, monseigneur, that I might eat the hares. Well, I like mutton better. It is better for me, you see, while for you it comes to the same thing.' An odd way of putting it!

A gentleman, travelling in the same carriage as the pretty daughter of a rich Pennsylvanian lumber-merchant, chatted with her until she grew drowsy, when he vacated his seat for one by the side of a shrewd-looking old fellow. As they were whirling by a high mountain, his neighbour called his attention to it, and went on: 'Six or eight years ago that mountain was covered with a fine forest, worth at least ten thousand dollars. Now there are nothing but stumps, and the land is scarcely worth a cent. The net produce of that mountain lies over there in that seat. It has taken all that lumber which her father owned to raise and educate that girl. Some of you young men, if you were given your choice between the mountain yonder, as it now stands, and the net produce on that seat, would take the net produce; but give me the stumps!'

Probably the young men looked to getting land and love, like the Aberdeen lass who replied to her sire's inquiry: 'Fat's this I hear ye're gaun to dae, Jennie?' with: 'Weel, I'm just gaun to marry that fann over by there, and live wi' the bit mannies on't;' putting the case in as matter-of-fact fashion as the American journalist who informed all whom it did and did not concern that:

'Old John Robinson's youngest son, Frank, lately made a contract, in presence of a minister, to provide for Miss Frankie Bailey for the term of her natural life.' Smarter still at euphemism was the daughter of an American judge. She happened, at a dinner party, to be placed next an unsuccessful litigant, whose cause had been heard by her father. Ignorant of her identity, he aired his grievance, and to the dismay of the company rated the judge severely. Becoming suddenly suspicious that something was wrong somewhere, he turned to his fair neighbour, and expressed the hope that the judge was not related to her. 'O dear, no,' said she; 'only a connection of my mother's, by marriage.'

Over-curious people are not easily silenced, but the feat is to be accomplished. An old gentleman complaining that his glasses were not strong enough to serve his turn, was told by the optician that they ought to be so, seeing they were 'twos.' 'What have you got after twos?' inquired he. 'Number ones,' was the reply. 'And after ones?' 'Oh,' said the optician, 'if you don't find *them* strong enough, sir, you will require a dog and a string.' The following colloquy took place outside a house in an American city, between some country visitors, unable to obtain entrance, and a German living next door. 'Jane not at home, did you say?' 'Nein, Chane's nod at home.' 'Where is she?' 'She's gone the cemetery down.' 'When will she come back?' 'Oh, she won't come back already any more; she's gone to stay; *she's det!*' A stranger, passing a churchyard and seeing a hearse standing hard by, inquired who was dead. The sexton informed him. 'What complaint?' asked the inquisitive one. Said the old man: 'There is no complaint; everybody is satisfied.' One man remained unsatisfied when he read in a Californian newspaper a paragraph respecting the vexed question of how Cain obtained a wife: 'You want to know where Cain obtained his wife. Upon any subject of a public nature we never refuse to throw the desired light. But this is altogether a different thing. It is a family matter, with which we do not care to meddle. Cain died some time before many of us were born, and such idle curiosity respecting the family affairs of a deceased person we regard as most reprehensible, and calculated to violate the sanctities of domestic life.'

Sheridan once declined to take a walk with a troublesome feminine admirer, on the plea that the weather would not permit; and being caught by the lady as he was sneaking out for a stroll, countered her remark that the weather seemed now to have cleared up, with the bold asseveration: 'Yes, madam, enough for one, but not enough for two.' Enough for one would, however, have been held enough for two, had the lady been as attractive as the fair one to whom a youthful admirer wrote: 'I want you to come around to our house. If you cannot get anybody to come around to your house, and fetch you around to our house, I will come around to your house, and fetch you around to our house.' He evidently meant business, although his method of putting things was as odd as that of the gentleman who would not hear of sharing his fortunes with a partner because: 'If you make anything, you don't get it; and if you lose, you have to lose it all;'

or the wit who fought shy of crossing weapons with Lady Ashburton, not, as he said, that he minded being knocked down; but he could not stand being danced upon afterwards.

#### A DIALOGUE.

'DAINTY little lady,  
Listen, pray, to me;  
Canst thou ever love me?  
Canst thou? say to me.'

'Ere I tell you that, sir,  
You must prove to me  
That my heart with you, sir,  
Safely kept will be.'

'Prudent little lady,  
Thou hast stolen mine,  
Surely, while thou hast it,  
I must value thine.'

'That is proof enough, sir.  
Further would I know  
What about me 'tis, sir,  
Makes you love me so.'

'Simple little lady,  
Hast thou not been told  
That thy silken tresses  
Shine like burnished gold?'

'Answer that is none, sir;  
I need scarcely say  
Even golden hair, sir,  
Quickly turns to gray.'

'Modest little lady,  
Clearest summer skies—  
Blue, and calm, and cloudless—  
Pale beside thine eyes.'

'Ah! but you must own, sir,  
Though that may be true,  
Age will never spare, sir,  
Eyes of deepest blue.'

'Cruel little lady,  
Shall I praise thy lips,  
Or thy fairy fingers,  
With their rosy tips?'

'There will come a day, sir,  
When these hands shall lie  
Quiet, and these lips, sir,  
Never frame reply.'

'Then, my little lady,  
I can only say  
That it was thy goodness  
Stole my heart away.'

'Goodness not my own, sir,  
Given each day anew;  
Lov'st thou me for that, sir?  
Then I love thee too.'

## SUNSHINE AND STORM IN THE EAST.

SUCH is the title given to Mrs Brassey's new work, consisting of an account of cruises in the Mediterranean in 1874 and 1878.\* The book being two distinct narratives of journeyings over nearly the same ground, is much less compact in character than the authoress's voyage round the world, nor is it so interesting in its detail of sea adventures. There is, however, the same lively off-hand manner, and we are introduced to scenes in connection with affairs in the East which are still under discussion. In looking over the volume, with its numerous finely executed wood-cut illustrations, one feels almost envious, not only of Mrs Brassey's good-luck in being able to make such delightful excursions in the 'Sunbeam,' but of her singular facility in presenting so faithful a record of what she saw and experienced. There is something more than this to excite surprise. It is her industry and power of endurance. She encounters storms with the fortitude of an 'old salt,' fills up every spare moment in writing or finding subjects for illustrations, and on all occasions on landing at strange ports, sets off with members of her family on horseback, to see places of interest—if need be, bivouacking in tents on the journey. No ordinary fine lady would be fit to undergo a tenth part of what, with apparent cheerfulness, she managed to overcome.

After remaining only a few days in England, on returning from a cruise to the Arctic Circle, Mrs Brassey proceeded on her voyage to the East. The 'Sunbeam' started from Hastings, 4th September 1874. There was a fine run to the Straits, and an opportunity was taken to visit Tangier and Ceuta, on the African side of the Mediterranean. On the 18th October, the 'Sunbeam' reached Constantinople, of which a vivid account is given. The Turks had not yet experienced the horrors of the Russian invasion, and everything was going on in the old heedless way; so that Mrs Brassey was favoured by seeing the

Sultan's court and palaces in all their glory. The bazaars were in full swing. It was amusing to observe the Turkish ladies with their attendants 'admiring and bargaining for second-hand dresses, all very smart in trimming, and of the most gorgeous colours, though somewhat soiled. I have often wondered what became of old ball and dinner dresses; but now that I have seen the enormous quarter of the bazaar devoted to the sale of these articles of apparel, I cease to do so.' From this fact we should imagine that the now impoverished state of affairs in Stamboul will have told seriously on the English export of ladies' second-hand dresses. We learn that on all hands young Turkish ladies were beginning to adopt European usages, and to rebel against the old-fashioned Turkish restrictions.

Mrs Brassey had excellent opportunities of gathering facts concerning the domestic affairs of the Sultan which would not have been afforded to any male writer. Some of the particulars are curious. 'The Sultan,' she says, 'is not allowed to marry; but the slaves who become mothers of his children are called Sultanas, and not allowed to do any more work. The Sultanas may not sit at table with their own children, on account of their having been slaves, whilst the children are princes and princesses in right of their father. The princesses may see men, and choose whom they like for their husbands. If they fix their affections on a married man, he is obliged to get rid of his wife or wives, and is not allowed any wife but the princess, who keeps him in the strictest order, and either disgraces him or has him bowstrung should he offend her seriously.'

The children of the Sultan are indulged and pampered in a way that seems perfectly monstrous. A droll incident is related. The youngest son of the Sultan, a boy nine years of age, would be an Admiral, with a gorgeous uniform and sword corresponding. In this whim he was indulged; but the child also insisted on having a war-ship on which he could hoist his flag; and that was not so easily managed. There was a bridge building which would prevent the ship

\* London: Longmans, Green, and Co. 1880. 1 vol. 8vo.

from floating up to the palace. The contractors were ordered to open the bridge to let the ship pass. To this they very naturally demurred, as the work of two or three months would have to be undone. But the orders of the Sultan were imperative. Afraid at the risk of losing their heads, the contractors obeyed. The bridge was taken down; and a large ironclad being brought out from the docks, was moored in view of the nursery window, to gratify the child with the sight of a flag being hoisted—thus causing enormous inconvenience to the whole town for months, to say nothing of the waste of money, of which the Sultan paid very little, and for the loss of which, I imagine, he cared still less. As appropriate to the story, a wood-cut likeness is given of the child-admiral in the full uniform of the Turkish navy. From this and similar follies, we learn how the enormous loans made to the Porte were squandered without any consideration as to consequences.

The descriptions given of court-life and of visits to places near Constantinople are among the most interesting parts of the book. Early in November, the 'Sunbeam' heaved up anchor, and proceeded down the Dardanelles to the Greek islands, amidst which there was some agreeable sailing—the scenery of Zante, Cephalonia, and Corfu being specially charming. We learn that since the gratuitous cession of these islands by England to Greece, things have not turned out so well as the natives expected. The roads are not kept in repair, and the taxation is excessive. 'Every respectable person to whom we have spoken bitterly laments the departure of the English from their occupation of the islands, and gives the most dreadful account of the Greek government, which in these islands is hardly a government at all, but simply a system of bribery and corruption.' At Corfu, the authoress adds: 'The poor islanders lament the loss of British rule, under which at one time they used to complain that they were only slaves. They find the difference now, when the Greek government neglects them utterly, except to impose enormous taxes; and the patriotic idea of being governed by a Greek king does not seem to console them much.' It is to be hoped that matters have since mended with these Greek islanders; but if not, they have only themselves to blame. After visiting Greece, the yacht was turned towards Naples, and the voyage terminated at Marseilles. The party on board, thence travelled homeward through France, and arrived in England on the 2d January 1875. So ended the first cruise.

The second excursion was designed to embrace a wider range in the Mediterranean, including a visit to Cyprus. On the agreeable principle enunciated by Moore, that 'when pleasure begins to grow dull in the east, we may order our wings and be off for the west,' the intention had been to start in the summer of 1878; but Mrs Brassey was unwell, and the wings were not put in motion till the 20th September. As usual, the 'Sunbeam' was equipped with all that was needful for the trip. With three masts and powerful sails, this handsome private yacht could match any sailing-vessel in point of speed; but when occasion required, the sails could be lowered, the funnel raised, and steam brought into play. This,

we would call the perfection of sea-travelling. Living, as it were, in your own house, and able to rest or go forward in every clime according to fancy, the enjoyment is complete—

'Where the sun loves to pause with so fond a delay,  
That the night only draws a thin veil o'er the day;  
Where simply to feel that we breathe, that we live,  
Is worth the best joy that life elsewhere can give.'

The following were the members of the party: Thomas Brassey, M.P., owner and captain; Mrs Brassey, Mabelle Annie Brassey, Muriel Agnes Brassey, and Marie Adelaide Brassey (the two last being young children, ordinarily spoken of as Mynie and Baby), Dr Hoffmeister, and the Hon. A. Y. Bingham, by whom the very beautiful sketches in the work were executed. To these might be added three female domestics, with stewards and cooks; besides a crew consisting of mates, coxswains, engineers, and store-keepers. All told, there were thirty-eight persons on board. The saloon sitting-rooms are described as being fitted up with great elegance, and provided with books and musical instruments, for the solacement of the party. There was a stock of medicines for any emergency. By previous arrangements, letters and newspapers were to be posted to the principal places it was designed to touch. Mr Brassey appears to have been well qualified as a sailing-master and commander. Observations were daily taken, and a reckoning kept of the miles travelled; so that those on board could at any time know where they were. The yacht was, of course, furnished with Marryat's signals, by which questions could be asked or answered with vessels passing. These signals, which consist of small slips of bunting, that can be instantly run up to the mast-head, are a kind of maritime wonder. As arranged by the late Captain Marryat, and now universally adopted, vessels within sight of each other can keep up a conversation to the extent of many hundreds of questions and answers—the whole defined in a dictionary, which is ever ready at hand. When properly worked, these signals add immensely to the comforts of life at sea, independently of their value for nautical purposes. The reputation of the 'Sunbeam' led to no end of courtesies. On all occasions, the party and crew of the yacht kept Sunday according to English customs. Mr Brassey acted as chaplain, by reading prayers and a sermon. As to music for the service, Mabelle presided at the piano; and the sailors, some of whom had good voices, joined heartily in the singing. We have thus a pleasant picture of life on board the 'Sunbeam.'

There was rather rough weather at starting, but by the 24th September the yacht had run 224 miles, with scarcely any sail set. There was a short stay at Vigo, on the coast of Portugal, to give exercise to the children, and to allow of Mrs Brassey picking up in health. All were benefited by the sunshine and walks among the trees. The next landing was at Cadiz, in Spain, whence there was a run by train to Seville, at which the grand object of attraction is the cathedral, a building of matchless beauty, over which Mrs Brassey waxes quite enthusiastic. 'Every time one comes back to this beautiful building, whether the interval has been long or short, it affords increased pleasure and delight. A special interest and grandeur

are attached to the place, I think, from the fact that the name of the designer is entirely unknown. He worked for the love of God and of his art, not for the sake of personal fame; and the creation of his brain is now admired by thousands as each year rolls on.' Such is a just tribute to this marvellous Gothic edifice, which, with its marble fountain and environing orange-trees, contributes so materially to substantiate the saying, that 'he who has not seen Seville has seen nothing.' The party returned to the hotel exhausted with sight-seeing, their way being through a suburb 'where all the inhabitants were enjoying the evening air, sitting on their door-steps, singing and laughing, their hair always elaborately dressed with flowers, however squalid their attire might be.'

On the 8th October, the yacht dropped anchor outside the New Mole at Gibraltar. Visits to various places ensue. 'We went to lunch with Lord and Lady Napier at the convent, and heard a good deal of interesting conversation about India and Afghanistan. Lady Napier had an afternoon reception. It was a pretty sight in the semi-tropical garden, to see the people moving about, or sitting on the bright-coloured chairs and sofas under the trees, or enjoying lawn-tennis in the cool of the shady court. The children of the party, including our own, were entertained at the other end of the garden.' In the evening, Lord and Lady Napier with suite made a return visit to the 'Sunbeam,' and had tea. Everybody at Gibraltar is delighted with them. Moving on in a day or two, the yacht proceeded along the African coast. One of the stopping-places was Oran, a French town, where the hotels and cafés are said to be 'excellent and very cheap.' Good view here of the Atlas Mountains. From the African coast, the 'Sunbeam' shot across to the island of Sardinia, where an opportunity was taken of viewing the old Greek and Roman remains near Cagliari, the site of the ancient Caralis. Then proceeding to the coast of Italy, the party enjoyed a visit to Paestum and Vesuvius. At Pompeii they were specially favoured by being allowed to see some new excavations.

Next was the cruise to Cyprus, the western point of which island, near the ruins of the ancient Paphos, was reached on the 7th November. A considerable part of the narrative is devoted to Cyprus, and for this we must refer readers to the work of Mrs Brassey, who while doing justice to its beauty and fertility, laments the tendency of its climate to produce typhoid fever. The island has to all appearance been ruined in every possible way by the disgraceful mismanagement of the Turks. Its towns are in ruins, its mountains stripped of trees, its marshes left undrained, and its harbours choked up. Riding across the island, the party reached the British encampment at Nikosia, where they were hospitably entertained. At Famagousta, where there is a proposition of improving the harbour, a sad scene of desolation is presented. 'If Famagousta presents a melancholy appearance from the outside, the spectacle within is still more depressing. In the midst of the dust and ruins of the houses and palaces, once containing a population of three hundred thousand souls, are now to be found a few miserable mud-huts, the habitations of some three hundred people. Three churches remain standing

where once there were two hundred; and in the streets, only a few cadaverous-looking creatures may be seen gliding about like ghosts.' At the Government House, all the servants were down with fever. As regards a tendency to fever in Cyprus, there is something quite incomprehensible. Malaria, owing to want of drainage and defective cultivation, may have much to do with it. The strange thing is that, as Mrs Brassey was told, 'even at a height of three thousand feet above the sea-level the fever asserts its sway.' How this insalubrity is to be remedied, is somewhat puzzling. We doubt not, English physicians and engineers will get at the cause of the evil. Meanwhile, from the poverty and scarcity of population, native produce is surprisingly cheap. In doing some marketing, a large quantity of tomatoes, onions, and other vegetables sufficient for all on board the yacht cost only two shillings, and a 'nice fat sheep' was bought for thirteen shillings.

Farewell was bid to Cyprus, November 20. The weather was fine, the sea smooth. The evening was so warm that the party played cards on deck by moonlight, a circumstance which contrasts with the cold foggy condition of the weather in England at this season. Onward the 'Sunbeam' plied its way to Rhodes, celebrated for having once been the residence of the Order of the Knights of St John, and whose vacated palatial dwellings are still in tolerably good condition. The party lodged for a week comfortably, at a neat little inn—a quaintly arranged place with a mosaic pavement, kitchen in the yard, bedroom in a veranda, everything where it was least expected to be; and charming little peeps of scenery from every quarter.' Off again at sea, and passed Patmos, where St John wrote the Apocalypse.

The yacht arrived off Seraglio Point at Constantinople on the 1st December. What a change since four years ago! The Sultan deposed, and another in his stead. The harem dispersed. Evidences of misery on all sides. 'Constantinople,' says our authoress, 'has lost much of its glitter and glory; but the mud, squalor, and misery remain, and are increased tenfold.' The bazaars in a half-deserted condition. 'The slaves from the harems are constantly bringing valuable jewels and plate to be disposed of for a little money, not having themselves the least idea of their value. In this way we picked up some beautifully inlaid turquoise belts, carved ivory cups, old silver, and other things, by the merest chance. A friend of mine saw five splendid hoop gem rings, each worth nearly a hundred pounds, sold by a slave to a Jew for one pound each. . . . No more gorgeous silken-lined carriages, drawn by white horses, and guarded and attended by eunuchs, slaves, and soldiers; no more less pretentious equipages, from which step ladies attired in silk and satin, and sparkling with jewels, their bright eyes imperfectly concealed by their yashmaks and feridgees. All these are past and gone, and all that can now be seen are a few poorly dressed ladies making their small household purchases.' Such is the graphic picture presented of the desolation that has at length deservedly overtaken the most atrociously miscondacted government on the face of the earth. The sins of the Turks have assuredly found them out. But things are not yet at their worst. More terrible humiliations await the Porte and all belonging to it.

Space does not permit us to extend our notice of this agreeable work, which from its attractiveness will be found, we presume, in every public library. Only a word at parting. In returning from Constantinople, the yacht experienced some heavy gales, but fortunately without any disaster. The party left the 'Sunbeam,' not without regret, at Malta; and again returning home through France, were once more in England on the 8th January 1879. The reception at Battle Abbey was as usual marked by a merry peal of bells, every ope, dogs big and little included, testifying their happiness on the safe return of the family. Mrs Brassey is happy in the few lines of verse with which she heads her chapters; the last being about the most appropriate in the series:

'Tis sweet to hear the watch-dog's honest bark  
Bay deep-mouthed welcome as we draw near home;  
'Tis sweet to know there is an eye will mark  
Our coming, and look brighter when we come.'

Our feeble voice may be permitted to mingle in the general chorus which welcomes Mrs Brassey into the list of English writers, and also to congratulate her on the wholesome and cheerful choice of subject which she has so successfully struck out for general entertainment. W. C.

## A LIFE'S ATONEMENT.

### CHAPTER III.—HISTORY.

*Costly and cumbrous vulgarities choked these gilded salons.*

THE Hartleys were new people, and were not yet entitled to call themselves 'county.' No man knew exactly how rich old Hartley was, though he passed as a sort of Croesus. But his mansion was new even to rawness. His coat of arms was original even to absurdity. The whole style of the man was too brassy, too obtrusive, too florid, too everything but gentlemanly. He was an old man and an ugly and a vulgar, and his dress was loud and ostentatious. He had bought a huge estate down there, and had christened it Hartley Park. He had 'built unto himself a gorgeous mansion, and had christened it Hartley Hall. He had provided himself with a stud of horses, the like of which the county could not shew. His servants were attired in an overwhelming livery. His greenhouses rivalled my Lord Chesterwood's. He kept open house, or something very like it, the whole year through; and he gave on his first coming numerous entertainments for the benefit of the county people, from which the county people coldly stayed away. The rooms of Hartley Hall were more plenteously furnished with buhl and ormolu than a west-end upholsterer's warehouse. Costly and cumbrous vulgarities positively choked these gilded salons. Pictures from the hands of the first modern artists—for art was here as new as everything else—graced the wall in such profusion as almost to hide the very papering. Everything was on a scale of barbaric and unregulated splendour.

Benjamin Hartley of Hartley Hall had two sons. One was still at Cambridge, and the other was an extravagant Lieutenant in the Fourteenth Plungers. That gallant regiment lay just then at Cahir, and County Tipperary knew Lieutenant

Hartley well. Lieutenant Hartley, of Hartley Hall, possessor of unlimited cash and unlimited credit, and heir-expectant to a colossal fortune, was well-enough received among the county people here; and Horace St John Hartley of Jesus found little difficulty in the gratification of his desire for the companionship of the noblest swells just then known to Cambridge. For both the Lieutenant and the student had gotten that air of age their father lacked. Their father would be new to the end of his days, and would continue new if he could live to be as old as Methuselah; but both the lads had a rare power of adaptability. In the days when their father sent them to Eton, there were fewer of the sons of the newly-rich within its walls, and the two young fellows were not long in acquiring the airs of *ton*. The opportunities thus offered, and acquired, had tended to make them somewhat ashamed of their father and of his newness. They were rarely seen at home except at unavoidable seasons; and when forced to meet the author of their being and the contriver of their fortunes, they bore themselves with a distant hauteur in which the old man rejoiced.

'For'—so he sometimes mused—and so in the genial after-dinner hour would sometimes openly declare—'I ain't a gentleman, and I know it; but both Arthur an' Horace are gettin' to be regular tip-top swells. It ain't natural as they should look with a lot o' respect on me. I should despise 'em if they did. But I don't stand no nonsense, mind you. They do as I tell 'em; I take care o' that. I don't know as Solomon was so remarkable wise after all. He says he don't know whether a wise man or a fool is to come after him and collar his coppers. Well, I do. I've got two as sharp lads as you'll find anywhere, with a good eye to the main-chance, both of 'em; and a regular swell style about both of 'em as would ha' made my hair stand on hend to look at twenty year ago. And when I've dropped off, the lads'll come in an' put things straight. These county folks, with their high-strung notions, won't cut them, I bet. No, no. It's different with me. I've been in coal and iron and taller, and cotton and stocks and shippin', and pretty nigh everything. They call that sort of thing low, down here. And so it is low. But it's a bit hard lines on a fellow too. The man as does the work and gets the money can't enjoy it. At least he can't enjoy it thorough. But them as comes after him, them as he's scraped for and worked for, and toiled for and moiled for, they'll be able to come in with their Heton lingo and their eye-glasses, and run the rig with any of 'em. And as for coin, they'll go beyond 'em. In point o' coin, I ain't far off shakin' hands with old Coutts, and that's a fact. Big houses ain't always the warmest, and I don't know as if I was to go and tick off thousand for thousand along with him, as I mightn't have something to spare after all.'

So the old heathen communed with himself and with divers of his chosen. He had his good points. Like many men who have striven after money all their lives and have denied themselves greatly, he was, now that his fortune had grown secure, lavishly generous. His good-nature was genuine. His pretty niece had not even to wheedle in order to find liberal comforts for her favourite poor. The clergyman of the parish

never appealed to him in vain. 'No; hang it! Mister,' said old Hartley, when the parson first called on him and let loose upon him the simple annals of the poor of those parts—'No; hang it! Mister; I won't have that in *my* neighbourhood. But I'm not agoin' to keep the thunderin' village either. Look here,' continued Benjamin with a wink. 'Tell the beggars as I'm a hard-fisted dog as parts with his money like blood. Just keep up that bit o' gainmon between ourselves, will you? But you can exercise your influence, you know, an' grind a fi'-pun' note out of me once in a way; don't you see?' The cleric departing, gave it forth that Mr Hartley was one who did good by stealth and blushed to find it fame; but when this statement got back to Benjamin's ears, he grinned satirically, and surmised that the parson was not a man of business. 'It's a fine thing to have a reputation for hardness,' said the old gentleman. 'It saves a deal o' trouble.'

How came Benjamin Hartley with such a niece as Maud? How, in the name of all that is wonderful, came such a dainty flower to grow from such a rough and gnarled old stock? For rough and gnarled the stock must surely have been which produced Benjamin Hartley, Esquire. But years before this story opens, Benjamin's sister married—very high in life, as people who knew her then fancied; securing no less a person than the young Dissenting minister of the Black Country village she dwelt in. She was a woman of much innate refinement; and her husband—spite of the fact that he was a Dissenting parson—was a scholar and a gentleman. He was dolefully poor, and died young; and his wife followed his example early. Thus their one child, a daughter, was left to the mercies of Providence; and, said Uncle Benjamin, 'Providence turned up trumps in the shape o' me.'

There was another sister who had married later; who married a man whose affairs were flourishing, and who was so very far above the family, that he looked down upon it with a bitter disdain, and never, after his marriage, by a word acknowledged it. His name was Campbell, and he was a wealthy iron-master. Somehow or other, he came to grief, and died utterly penniless, leaving behind him one son, aged three years. Old Hartley was ignorant of this child's existence. Had it been otherwise, he would have given him a home with Maud; for he was not a man who bore malice, and had long since forgiven and forgotten John Campbell's disdain, and had never lost his affection for John Campbell's wife. But the years had come between them, and he knew nothing of their fall from prosperity, or of their death.

Just now—on this especial summer evening—Mr Hartley stood in his drawing-room in expectation of Frank's arrival. The Fairholts were the only county people who might be at all considered caught. Old Hartley knew well enough that they cared very little for him or his house, or even his money. He recognised the magnet which drew the two young fellows to Hartley Hall, and watched their attentions to Maud with much complacency. 'There's Mr William'—so he thought over matters—'has got a very pretty little estate. I know it's entailed, and he can have Maud if he wants her. But I'm rather in favour o' the young un. He'll have next to nothin'; but I like him. He's a

fine handsome chap, with lots o' spirit and fun in him, an' there's no takin' him for anything but a swell, anywhere. I've got two lads o' my own to look after, so they can't expect to get much along with her; but I shall hand her a cheque for a quiet little ten thousand on her wedding-day, and they can set up on *that*, anyhow, even if the young un gets her. Let the gell please herself—that's how I look at it.'

'Maud!' said the old man aloud, waking from his reverie. 'Ain't it time young Fairholt was here?'

At this moment young Fairholt was ushered in, and met with a loud and vulgar welcome.

'Aha! How d'ye do? Thought you wasn't comin'. Glad to see you, Mr Fairholt. And how's the Hiland? And ow's all at the 'All?'

'Everybody is well, thank you,' Frank answers; but he is already turning to shake hands with Maud. That young lady blushes a little as she comes to meet him, but receives him with great cordiality. A gorgeous menial announces dinner, and there are half-a-dozen other gorgeous menials distributed over the desert of Turkey carpet in the dining-room. Warm as the weather is, there is an aspect of arctic coldness about this huge apartment, and there is a sense of desertion in the very look of the great table. It would seem as though a score or so of people had been invited and had not come; and the three sit down in the Turkey carpet desert, before that table-land of snow, as in a magnificent but enforced isolation.

Will you look at Maud through her lover's eyes or through mine? For my part, I am free—in parliamentary English—to confess that I have seen prettier faces, though I have not seen many more lovable. Of what use is it to attempt to draw a portrait in words of a pretty young Englishwoman? How can the pen catch those gracious little turns of the head—those marvellously minute modellings of cheek and nose and lips—those tender graces of the eyes—those helpless yet fearless and endearing ways which go so far to make the charm of sweet eighteen? I can tell you that Maud is tall and slim and graceful. I can tell you that she has brown hair and hazel eyes. 'But girls with hair and eyes are everywhere.' I can tell you that her complexion is most daintily clear and sweet, and that her mouth is most eminently kissable. I could catalogue a score more of her graces; but what would this suffice you? My brother of the brush goes beyond me in this matter altogether, and Frank in twenty minutes could present you with a random smutch in colour which would tell you more about her in this regard than Dickens himself could have told you in a twelve-month.

Dinner is not a matter of much account to female eighteen and male four-and-twenty, when they chance to be at the same table and are in love with each other. Old Hartley's presence troubled the young people little, for he said nothing he could avoid saying, and seemed buried in his own fancies. Just a little tell-tale shot was fired across the table now and again from Frank to Maud, and from Maud to Frank, and they both grew a little shy.

Dinner being over, the millionaire broke silence: 'We'll take our wine up-stairs, if you please, Mr Fairholt. The ladies is very near a fiction in this here instance.'

So Maud's rising was the signal for host and visitor to follow. Maud's taste had evidently been busy about the room they now entered. There was no barbarism of splendour here. Everything was quiet, refined, and graceful. The windows of the room looked out on the park. A sweet prospect. The evening was still young. The blue of the sky was a little more tender, the gleam of the sunlight a little mellower on the park landscape and the pleasant river.

'For my part,' said the retired capitalist, arranging himself comfortably in an arm-chair, 'I don't take wine after dinner. I'm contented with a drop o' brandy an' a bit of ice. But there's anything you like here. Try that there sherry. My Lord Chesterwood himself can't beat that, I'll bet. Melted gold, it looks like, don't it? And by Jove! sir, that's pretty well what it amounts to. Now I shall just take my nip, and then I shall take my nap, and leave Maud to take care of you, sir. I can't do without my snooze after dinner.'

The old gentleman's appetite had been diminished by no such cause as that which had spoiled the dinner of his young companions. He had well eaten and drunken, and his nap came readily. A bassoon-like note again and again repeated, monotonous but mellow, accompanied and proclaimed his slumbers, and Maud and Frank were left to their own devices.

'Would you'— Frank began, and stopped there.

'Would I'— said Maud, hinting a continuation.

'I wanted to suggest a stroll in the gardens. It's dreadfully hot here.'

'Shall I rouse Mr Hartley?' Maud asked.

'Nonsense, Maud! Do you care to walk? It looks so peaceful and calm outside that it seems almost a sin to stay indoors.'

'It does indeed,' Maud answered, and for a moment disappeared. When she returned, she had thrown over her head a something of dark lace, the edges whereof fell to her waist—the merest pretence of preparation for out-of-doors. She and Frank were on very close and confidential terms of friendship, and were perhaps nervously inclined to parade this to themselves, because they both knew very well that there was something more than friendship, behind its pleasant mask. They chose a shady walk which led through well-laid gardens to the Park. At the Park gate they stopped. The silence had grown a little embarrassing, for neither had spoken since they had left the house.

Frank broke the bonds of quiet with an effort: 'I go back to town in a day or two.'

'Indeed!' Maud said. 'So soon?'

'Yes. It goes sorely against the grain; but I have some matters of importance to see to, and I must get back almost at once.'

'It is too bad, Frank. You are more than half pledged for the picnic on the first. You are a very faithless and inconsiderate person.'

'If you are going to scold, Maud, I must smoke. I can endure the ills of life with greater philosophy when behind a cigar than under any other circumstances. Are you provided?'

'Yes sir; I am provided,' responded Maud, producing a cigar-case. 'Knowing that we could not possibly spend five minutes together without quarrelling, and knowing that you can never

quarrel with decent politeness unless you smoke, I have stolen Uncle's case.'

'You are a very accommodating antagonist,' Frank answered, accepting the proffered cigar. He did not light it at once, but leaned with his elbows on the gate and looked thoughtfully across the Park.

'Well sir,' said Maud with a pretty air of harmless impudence. 'Get your battery in order. The enemy advances in full force.'

'No,' returned Frank, looking round upon her; 'I shall not fall back upon my reserves until my present forces are expended. I shall withhold my fire.'

'Very good,' Maud answered gaily. 'The enemy's advance-guard declares itself. Why were you so stupidly silent during dinner?'

'I plead guilty to the silence, but deny the stupidity.'

'You change ground already, sir, and try to escape from the battle-field to the law-court. But I am willing to encounter you there. On what ground do you deny the stupidity?'

'On the ground that I was mentally engaged in a wise admiration.'

'A wise admiration? The admiration of your own face and figure in the glass behind me? I caught you twice.'

'I am grateful for the complaisance which pronounces such an admiration wise.'

'And I,' returned Maud, 'am astonished at the vanity which accepts so absurdly false a compliment.'

'I return to the old simile,' Frank replied. 'My outposts fall back for the protection of the main body, and the artillery prepares for action. Will my courteous enemy assist me?'

'Your courteous enemy has stolen a box of vestas, and now proffers them.'

'My courteous enemy is thanked for her courtesy. But now a truce to truces. There goes the first puff from the artillery. The action begins in earnest, and the forces of the Frank make reprisals. Why were you so stupidly silent during dinner?'

'The enemy grows insolent.'

'Maud!'

'Sir!'

'Let us be serious.'

'I am more than serious. Come sir. For

Front to front the bannered hosts combine,  
Halt ere they close, and form the dreadful line.'

'Oh, bother Tom Campbell and his dreadful line! Maud, let me speak. I'm going back to town almost directly, and I have something I must say to-night. I shall not see you again for heaven alone knows how long.' He throws his cigar over the gate, and takes both her hands in his: 'Maud, I love you!'

The saucy eyes were lowered. Maud made no answer. Frank relinquished one hand and stole an arm round her waist. She attempted no repulse. He kissed her, and her head dropped down upon his shoulder. So they stood for a while.

I can scarcely find the heart, in pursuance of my function as story-teller, to take them from each other's arms. They will never be so happy as they are at this blessed moment, any more. There was a something which welled up in Frank's

heart and surprised him. An infinite protecting tenderness. An emotion at once vast and vague; comprising within it all possible loves; of fatherhood and brotherhood and childhood. He thought of his own follies and his own unworthiness, and his eyes were a little dimmed with tears. There was a sharp compunction in his breast as he laid a hand on each cheek and gently forced back the blushing face until the shy eyes were raised to his and dropped again, and the shy sweet face was nestled at his heart.

'Look here, Maud!' said Frank very earnestly. 'You don't know what a pack of imperfections you have taken hold of. I've been an idle, careless, butterfly sort of fellow: I have never been in earnest in my whole life about anything but you; and I want to make confession; and I want love to absolve me; and I want to promise that I'll be a thousand times more industrious and more manly in life than I have ever been before. I want to promise this; and I want to have it on my mind always that I have promised. And when I think of you, darling—and that will be always—I shall think of this confession and this promise. And just to make the promise all the more sacred, give me your hands, dear. Tell me for the first time that you care for me.' And so, by love, and love's confession, Frank Fairholt vowed himself to manhood.

The lovers lingered in the garden. The light grew softer and fainter. Through a long vista in the Park they could see the pale summer moon low on the horizon. It was a time and a place of peace, and joy had no tumult now. They talked—as happy lovers will—of the future. They filled it with bright visions of home and of homely joys. Was there any sorrow in the sky at all? None. There was no cloud even so large as a man's hand.

But Time will not stay his course, even for happy lovers. Parting came at last. A pleasant parting. Good-bye and Good-bye often repeated. A tender warfare in which each was resolved to bless the other last. Good-bye. Good-bye.

Was there any sorrow in the sky? Was there a cloud so large as a man's hand? Yet did these happy lovers meet no more for ever.

## A PERILOUS ADVENTURE IN TIERRA DEL FUEGO.

IN TWO PARTS.—PART I.

In the year 1851, the *Nautilus*, a barque of three hundred tons burden, was chartered by the Chilean government, and placed under the command of Captain Lopez de Ferrande of the Chilean navy. The object was to make a fresh survey of the Strait of Magellan and the adjacent coasts. Among those who sailed on board this vessel was the writer of this present paper.

On the 13th of September—early spring in the southern hemisphere—of the year above mentioned, the *Nautilus* sailed from Valparaiso, and arrived off Cape Desolation, at the western entrance of the Strait, on the 29th of the same month. It is not my purpose to furnish any report of the survey; therefore I shall merely mention that the vessel remained on the service until the 1st of

August of the following year, when the task having been completed, she sailed to return to Valparaiso. During our long sojourn in that gloomy region of the earth, it was the chief relaxation of the officers of the ship to go on shore to shoot *guanaco*s, a species of alpaca which abounds on both shores of the Strait. It was on one of these excursions on shore that the circumstances occurred which I am about to relate.

On the 4th of May 1852, the *Nautilus* lay moored to a rock in deep water close to the cliff, in a narrow creek on the Tierra del Fuego or south shore of the Strait; and early in the afternoon of that day, a numerous party, consisting of Captain de Ferrande; the surgeon of the ship; Don Enrique de Guzman the second officer, who was the son of the chief owner of the vessel; myself, and others, went on shore on a shooting expedition. We had capital sport; and it was still early in the evening when we prepared to return on board. While, however, the sailors in attendance were collecting the spoils of the chase—comprising eight guanaco's, ten or twelve foxes, and several birds of different varieties—Don Enrique, who was standing by my side, apart from the others of the party—from whom we were concealed by the 'bush'—espied a herd of guanaco's on the side of an acclivity near by.

'Look yonder!' he exclaimed in English, which language he spoke fluently. 'Our rifles are loaded. Let us have another shot before we return to the ship. That is the finest herd we have met with to-day.'

He crept cautiously towards the herd, and I followed him. Guanaco's, though very timid, are not keen of scent, and may be approached without much difficulty, if the hunters can keep out of their sight; but before we got within rifle-range of the herd, the animals took alarm and started off at full speed. Still we followed, forgetful of our companions in the ardour of the chase, until, having plunged into the heart of the bush, and missed the path, we had to own ourselves completely lost! To increase our difficulties, the dense gray fog or mist, called by the Spaniards the *müsgo*, was rising in the east, and rapidly increasing in density. This mist is peculiar to the shores of South America, or at all events I have never met with it elsewhere. It is most frequent in the fall of the year—that is, in the months of April, May, and June; and it usually rises suddenly at nightfall, sometimes advancing with great rapidity, but oftener creeping over the ground at as it were a snail's pace. Though very light in colour, no object at any considerable distance off can be seen through it; while objects near by that are visible assume a shadowy aspect, and are enormously magnified.

Don Enrique called my attention to the shroud-like mist that was approaching, and that threatened speedily to envelop us in its folds.

'Let us make our way towards the coast,' said I. 'If we follow the line of cliffs, we shall find the ship. Otherwise, we may wander about in this confounded bush all night.'

We soon reached the cliffs, and then continued our course westward, the mist still slowly approaching, but as yet a considerable distance in our rear;

and despite the unpleasantness of our position, we stopped for a few moments to gaze upon the prospect presented to our view—fascinated as it were by its melancholy aspect. Perhaps there is no scenery in the world so desolate, so gloomy, so savage in its features, and withal so melancholy as that of Patagonia and Tierra del Fuego. I have stood in the Pass of Glencoe while a wintry storm was raging around me; I have visited in the fall of the year some of the wildest fiords on the west coast of Norway; and have stood on the summit of the cliffs in Iceland when night was closing in, and gazed upon the bleak surrounding rocks and crags, and upon the stormy waves of the Atlantic rolling far down beneath my feet. But though in each and all of these places the scenery is savage and gloomy as need be, it lacks the utter desolation that is the chief feature of Patagonian scenery.

Already the air was growing chilly, though during a few hours at noonday the sun had shone brightly, and the heat for a while had been oppressive; for the nights are always cold on these dreary shores, alike in summer and winter, and summer snow-storms are by no means infrequent. Usually, however, whether in summer or winter, the sky wears a dark leaden aspect, and seems to hang strangely near the earth; while the generally stormy sea is of a muddy, greenish hue, different in appearance from any other part of the open ocean. The cliffs rise to the height of from seven to fourteen hundred feet, almost perpendicularly from the waters that wash their base—the black rugged rocks of which they are composed appearing to be heaped carelessly one upon another—Ossa piled on Ossa in wild confusion, and threatening to fall at any moment.

The Strait of Magellan, three hundred miles in length, varies in breadth from a mile and a quarter to thirty and thirty-five miles; but in the narrow creeks in one of which the *Nautilus* lay moored, the towering cliffs, viewed from a short distance off, seem almost to touch one another. The island of Tierra del Fuego narrows almost to a point at its western extremity; and now, standing on the cliff above the creek, we had a view alike of the opposite shore of Patagonia and of the Pacific Ocean to the southward. It is frightful to gaze down into one of these narrow creeks from the summit of the cliffs. Often when on shore we were accustomed to crawl on our hands and knees to the edge of the cliff and look down into the dark abyss, shuddering as we gazed upon the waters—looking almost black as ink—that rolled beneath.

Little did Enrique or I think at such times that the time would come when we would stand together midway above the fearful gulf, a narrow ledge of crumbling rock alone preserving us from falling into its terrible depths!

Now, though we were anxious to outstrip the approaching misgo, and get back on board the ship ere night closed in, we still lingered, gazing upon the mournful prospect, ever changing, and growing more and more gloomy as the shadows of evening crept over it. Notwithstanding the gradual approach of darkness, we knew that there would yet be nearly an hour of twilight; and we watched the flight of the albatrosses and Cape pigeons and other sea-fowl peculiar to the latitude, as they hastened in from

seaward to their dismal eyries in the crevices of the cliffs, filling the air with the sound of their discordant screams. Seemingly near to us, though in reality many miles distant, was the island of Cape Horn, with the singularly curved cone rising from its centre, a dismal, storm-lashed beacon, warning mariners not to approach too near the fatal coast. It had been nearly calm, but the wind was beginning to rise, and though still light, was howling mournfully as it swept through the numerous creeks and inlets. The shudder of the dying day was upon land and sea alike.

A short distance from the shore, between the island of Tierra del Fuego and Cape Horn, two huge grampuses had risen to the surface to breathe and to amuse themselves with their clumsy gambols. Every now and again the huge monsters raised their black, arched backs high out of the sea, each time spouting a vaporous jet high in air, and then falling back with a tremendous plash—faintly audible at the spot where we stood—dived down, and disappeared from our sight, to rise again, in an incredibly short space of time, a quarter of a mile distant. The noise produced by the spouting sounded, in our fancy, like the long-drawn sighs of some giant Titan bemoaning the sad fate that compelled him to wander for ever amidst the desolation of a ruined world.

Turning about, we beheld, on the other hand, close beneath our feet, the dark abyss of which I have spoken, and the gloomy shore of Patagonia, over which the shadows of night were now gathering rapidly. But the misgo was creeping nearer and nearer, and the ever increasing chilliness of the atmosphere urged us to hasten our return to the ship.

Don Enrique, who was a few paces in advance of me, hastened on, calling upon me to follow. I obeyed the call; but scarcely a minute elapsed ere my companion, with a cry of terror, suddenly disappeared. I thought that he had stumbled into one of the numerous holes or crevices on the summit of the cliff, and sprained his ankle or otherwise hurt himself, and I hurried on to his assistance. In an instant I felt my feet slipping from under me, and found myself sliding swiftly down. In vain I tried to stop myself—I only slid the more rapidly. Presently I felt as though I had slipped over a ledge, and was no longer sliding but falling into the dark depth beneath the cliff. The horror of those few moments—they could have been but a few moments—is indescribable. I gave myself up for lost, and my whole life from childhood upwards seemed to pass in review in my memory. I thought of home, so far away; of friends whom I should never see again, and who probably would never know my fate; of my shipmates on board the *Nautilus*, so near by, yet from whom I should soon be separated for ever; of the warm, snug, well-lighted cabin where they were enjoying themselves, and vainly looking for me to rejoin them. It is said that the wild fancies in dreams occur only at the moment before waking. In those few moments I lived a lifetime. I was brought up suddenly with a jerk that almost precipitated me into the gulf beneath; and I found my feet resting upon a narrow ledge of rock not more than eighteen inches wide, which appeared to extend upon my right hand

along the whole line of the cliff. I had slipped down one of the slopes which here and there break the level line on the top of the cliffs, the short moss-like grass with which they are overgrown becoming slippery as ice or frozen snow, when slightly damped by the dews of evening, after the sun has shone warmly upon it during the day.

My first thought after I recovered from this shock was of Enrique. I could not see him, and I believed that he had fallen to the bottom of the abyss.

'Enrique! Enrique!' I shouted several times in vain. At length, to my great relief, he faintly responded to my call. He too had been brought up by the same narrow ledge of rock to which I owed my safety. But he was separated from me by a slight projection of the cliff, around which the ledge appeared to run; though, at the distance of a few yards to my left, it broke off suddenly, the cliff at that spot appearing to rise perpendicularly from its base to its summit, which I judged to be at least a hundred feet above my head.

'Are you on the top of the cliff?' cried Enrique.

'No,' I shouted. 'I slipped down the slope. I am standing on a narrow ledge of rock. I was afraid that you were lost.'

'O Dios! what will become of us?' he exclaimed.

'We must try to regain the summit,' I replied. 'Can you come to me, or shall I try to reach you?'

Enrique made no reply; and fearing that he had fainted, I determined to try to get to his assistance. In the first place, however, thinking that it would be best for both of us if I could regain the summit, as I might then make a rope of a portion of my clothing, and let the end down to my companion, I tried to climb up the slope, though for several feet above my head—to the spot where I had fancied I was falling perpendicularly into the abyss—the cliff was almost straight up and down. Still I tried my utmost to clamber up. I dug my finger-nails into the rocky earth, and strove to find a foothold on the little projecting points of rock. But though I broke my nails in the attempt, I could obtain no sufficient purchase whereby to raise the weight of my body, and I slipped down immediately. However, I made a second attempt, and this time climbed a few feet above the ledge; but I slipped down again, and so heavily, that a portion of the ledge near its edge crumbled away with the shock of my fall, and I tried no more. The risk was too terrible to venture a third time.

'Are you still safe, Enrique?' I now inquired; and this time he faintly answered: 'Yes.'

'I'll try to get to you,' I said.

But this was no easy task, for the ledge did not run in a straight line. In some places it rose slightly, in others it fell, while it narrowed in spots from eighteen inches to not more than half that width. I now took off my shoes, and left them where I stood. Fortunately, both Enrique and I wore thick-ribbed worsted socks, which enabled us to obtain a firmer foothold than we could otherwise have secured. My rifle, to which I had clung while slipping down the slope, had been jerked out of my hand by the sudden shock

when I was arrested by the ledge, and had fallen into the dark depth beneath. But though I afterwards grieved sorely over its loss, I thought little of it at that moment. Having nothing now to encumber me, I endeavoured to grope my way along the ledge, pressing my body close to the side of the cliff, while I placed one foot before the other with the utmost caution. I did very well until I reached the projecting point which concealed Don Enrique from my sight. But at this point, though it projected but a few feet, the ledge inclined slightly upward, while it narrowed so much that I could not have placed my feet side by side. Yet round this point I had to make my way, pressing close to the side of the cliff on my right hand, and conscious that a mis-step, or the slightest feeling of giddiness, or the least crumbling of the ledge itself, would hurl me headlong into the now invisible depth—seven or eight hundred feet. I scarcely dared to draw my breath. I dreaded lest each successive moment should be my last; but I succeeded in rounding the point, when the fearful footpath widened; and in a short time I stood safe by the side of Enrique, who seemed to have hardly yet recovered from the first effects of the shock he had experienced.

I had no little difficulty to persuade him to move onward. He would have remained where he was; but the ledge at this spot was little more than twelve inches wide, and had we remained where we stood, it is not likely that either of us would have seen the morning light. If we had been seized with vertigo, or if for a moment we had closed our eyes in sleep, we would surely have fallen from our giddy perch, while the slow but sure approach of the mûsco rendered every moment of delay more perilous. I could not possibly have passed my companion and gone on by myself, even had I been inclined to do so; but at length I persuaded him to move onward. Frequently, since that terrible night, have I marvelled at our escape, and shuddered to think of the fearful peril in which we were placed. For a long time afterwards it haunted me in my slumbers, and I would start up in terror from a dream in which I fancied that I had slipped from the ledge, and was falling—falling into the awful abyss! At such times of great peril, however, men dare and accomplish deeds that at other times appear utterly impossible to them. The love of life, or the necessity for exertion at all hazards, or the excitement peculiar to such occasions, supports them, and imparts to them a degree of courage and energy that they would not otherwise possess.

We were both young and active, and accustomed to climb to or look down from dizzy heights, and were frequently placed in a position in which we as it were held our lives in our hands. We hoped ere the mûsco should close around us or ere darkness should set in, to discover some spot on the side of the cliff up which we could clamber to its summit, which we judged to be about a hundred feet above our heads; and with the utmost caution, placing one foot before the other, we moved slowly along the ledge, seeking, for a long time in vain, for such a spot as we hoped to find.

I have said that the ledge rose and fell at intervals, and was also of unequal width; but in no spot was it more than eighteen inches wide,

while it was frequently not more than half that width. The ascents were not difficult to make; but the descents, though generally very slight and gradual, were dangerous in the extreme. It was difficult to prevent our feet from slipping, and sometimes we fancied that the ledge itself was giving way beneath us. We had advanced perhaps a quarter of a mile from the spot where we fell—though in the circumstances in which we were placed it is difficult to judge of time or distance—when the method employed by our shipmates to guide us back to the ship came near to bring about our destruction.

As we afterwards learned, our shipmates, finding that we had not returned to the ship with them, naturally supposed that we were lost in the bush; and Captain Ferrande ordered a gun to be fired, thinking that the report would guide us towards the creek in which the ship lay. The report was echoed and re-echoed through the Strait, the sound reverberating amongst the glens and inlets like rolling thunder. It almost startled us off the narrow ledge, and caused several large pieces of overhanging rock to detach themselves, and to fall crashing and thundering into the gulf beneath. The sea-fowl too, the albatrosses and Cape pigeons, alarmed at the unusual noise, came forth from their roosting-places in the side of the cliff, and flew, screaming in terror, through the inlet; and one large albatross, as though it resented our intrusion upon its dreary domain, rose screaming discordantly high above our heads, and then swooped down directly upon us, its tremendous wing almost touching us as it descended. So near it came to us that it was a miracle we were not swept from our precarious foothold.

These, however, were not the most alarming results of the report. A huge piece of rock fell heavily upon the ledge a short distance from us and crumbled it completely away, leaving a gap of nearly three feet in width, over which we had to pass. To leap or stride across such a gap on level ground is easy enough even to a child. But it is a very different matter to cross a gap three feet wide with a perpendicular wall of rock on one side, and a chasm seven hundred feet deep on the other, with a consciousness that the least slip or mishap of any kind must prove fatal. The ledge at this spot was not sufficiently wide to enable us to put our feet together, and the fact that the fall of rock had been sufficient to crumble it away, shewed us how precarious was our slender foothold, and led us to fear lest our weight, even if we safely crossed the gap, should cause it to crumble beneath our feet. To turn round on such a narrow foothold was impossible; and if we *could* have turned and gone back to the spot whence we started, it would have served no purpose. We could not run to take a leap that would carry us well clear of the crumbling edge. There was no alternative but to step as lightly and actively as we could across the fearful gap.

For some moments we both hesitated. To take the leap in our position seemed like an act of suicide, yet to remain where we were until we should become enshrouded in the mist would be equally fatal to us. At length Enrique, who was in advance of me, and was younger and lighter than I, ventured to make a leaping stride across the gap, and was successful. I followed, and also

succeeded in crossing safely, though, as I landed on the narrow foothold, I heard the rocky earth at the edge of the gap crumble and fall rattling down the cliff. We had escaped a fearful peril. But darkness was now rapidly closing in. We could see but a very short distance ahead, and the mist in our rear was rapidly overtaking us. We strove to encourage one another; but hope of eventual escape was almost dead within us. Again we moved onward for a time that seemed considerable to us, and still, though the ledge was now much wider, the side of the cliff against which we pressed rose perpendicularly, high above our heads. At length I was startled by a cry of joy from Enrique. I could scarcely see him now through the gloom, though he was but a short distance ahead. He, however, waited until I came up, and then joyfully pointed to a gentle slope in the side of the cliff, leading apparently from the ledge to the summit. We commenced the ascent immediately. It was full of projecting pieces of rock, which sometimes gave way beneath our weight, and went crashing down the cliff's side. But we stepped with great caution, following the sailor's rule of never letting go our hold with our hands till our foothold was secured, and thus succeeded in reaching the top of the cliff in safety. Then Enrique, who, since the moment when he recovered from the first shock of his fall, had behaved himself bravely, sunk down to the earth and wept and sobbed hysterically. Poor fellow! he had not been a twelvemonth married, to a young and pretty girl, when the ship sailed from Valparaiso.

'O Inez, Inez!' he sobbed forth in Spanish; 'what would have become of *you* if I had perished?'

I attempted to offer no consolation; for though I struggled to control my feelings, I felt nearly as bad as he. After a while, he grew calmer; and we both expressed our gratitude to heaven for our almost miraculous escape from a terrible death. It soon became dark, and the mist wrapped us in its folds. It was bitterly cold, and the mist in a short time wetted us completely through our clothing. Nevertheless, we were both so overcome with fatigue that in a few minutes we both slept soundly, nor did we wake until day was breaking and the rising sun was gradually dispersing the mist.

We still felt the effects of our terrible adventure of the previous evening, and our limbs were numbed and stiff. However, as the sun rose higher in the heavens and shone forth bright and warm, our wet garments dried upon us, and the stiffness in our limbs passed away. Approaching the edge of the cliff cautiously on our hands and knees, we peered down into the Strait, in the hope of seeing the ship; but we could see nothing of her. Enrique had let go his rifle when he first felt his feet slipping, and of course had lost it, as I had lost mine, or we would have fired off the pieces to attract the attention of our shipmates. But as we could not do this, we again plunged into the bush, and sought to discover the native path from which we had strayed on the previous afternoon, though we found it difficult to pick our steps—without shoes to protect our feet—amidst the prickly shrubs and fallen branches of trees which covered the ground. Still, though we were beginning to feel hungry, we kept up our spirits,

feeling confident that our shipmates would come in search of us, and that if we failed to discover the lost path, they would find us before the day was very far advanced.

## MY WIFE'S INHERITANCE.

## IN THREE CHAPTERS.

## CHAPTER III.—HOW IT WAS REGAINED.

I RETURNED to Cottam saddened and disappointed, but by no means convinced. I had, however, no choice but to leave the mystery to be solved by time. In due course Ellen and I were married. She received her two hundred and fifty pounds; and opportunity just then occurring, I bought a practice at Kinton, to which place we removed. We saw nothing of Charles, but heard that he had gone abroad. And so days and months passed on; I was happy in the love of my dear wife, and we both tried to forget 'what might have been,' or that we had ever looked forward to the possession of a fortune.

One evening about twelve months after I had settled at Kinton, I was called into the surgery to attend a lady. Of course I had no other thought than that it was a patient; nor was my opinion changed when I saw her, for her cheeks were hollow and her eyes sunken; but what was my surprise on looking closer to recognise in that wasted form the once passably fair, if not brilliant Miss Leclerc.

She saw I recognised her, and without waiting for me to speak, said: 'You are surprised to see me here, doctor; but I have something important to say to you. Can we be alone?'

'We shall not be disturbed here,' I said; and still not doubting that it was medical advice she required, I added: 'Well now, tell me your symptoms, and I will prescribe for you.'

'No, doctor; your medicines would do me no good in the purpose I have in view. I require your help, not medicine; and let me say, that in helping me, you will help yourself in a way you little expect.'

'Tell me how; and if I can do it, I will.'

'You can do it, I am sure; and equally sure you will, after you have heard my story.'

'I am all attention.'

'Well then, listen. I must go back to the time of Mr Russel's death. You were very much surprised and disappointed at the disposition of his property; were you not?'

I bowed assent.

'In fact the will was a complete mystery to you?'

'It was indeed a deep mystery.'

'I can explain it.'

'You!' I said, springing to my feet—'you! Why, you had very little communication with Mr Russel in his last illness.'

'No; and yet I tell you I can explain the mystery; and on two conditions, I will.'

'Name them. They must be onerous indeed if I fail to comply with them.'

'Oh, they are not difficult; they are simply these. First, that in consideration of this my assistance in obtaining your rights, you will not have me punished for the part I myself took in the matter; and secondly, that you will supply

me with money enough to go to America, where I have friends.'

'But if a crime was committed, have I the power to promise you immunity from punishment?'

'Be content. You have; for the crime—and I won't deny that there *was* a crime—injured no one but you and Miss Ellen; and if I make restitution by enabling you to secure the real culprit, you can surely let the tool go free.'

'Well, I promise,' I said, after a few moments' consideration. 'Do what you have said, and I pledge my word that neither I nor any one on my behalf shall bring you to justice for your share in the transaction. That being granted, the other condition is easily fulfilled.'

'That is enough. I will now proceed. But first I must tell you why I do this. It is not, as you might suppose, out of consideration for you, or even for Miss Ellen, although my conscience has often troubled me for my ingratitude towards her. No,' she said; 'I have a purpose to serve, and that purpose is—*Revenge*. Nay; start not. It is the desire for revenge that nerves me to the confession. You remember what I once was. Look at me now. See my hollow cheek and wasted form; hear of my blighted life, and then cease to wonder that I crave for revenge on the cause. But pardon me; I must begin at the beginning. Soon after Mr Russel's death, and the affairs were all settled, Charles left England for Paris. This you knew; but you did not know that I went with him.—As his wife, do you ask? No! Poor silly fool that I was; I trusted to his promise, that we would be married in Paris. Well, we lived gaily enough for two or three months; the marriage put off on one pretext or another, until one day he went out, and never returned. He had left me—left me almost penniless—to starve or die, not caring which. It was some days before I could realise the fact that I was indeed deserted. I thought some accident had befallen him, and made inquiries in all directions. I even visited the dreadful Morgue, but without avail. At length I heard that he had gone to Lyons, on his way to Venice; and thither I determined to follow him, but on the road was struck down by illness. When I recovered, all trace of him was lost. How I got back to England, I hardly know; but I was buoyed up by the hope that after all there might be some mistake, and that I should find him here, glad to receive me back. I did find him; but how? The Willows has now both master and mistress. Yes; he is married, notwithstanding all his promises to me. Another reigns in the house where I ought to be supreme. Oh, but he shall regret it. Little did he know my power, or he would have sacrificed his right hand ere he offended me. I did not tell him, because I wanted his love, not his fear; and when I would have told him, it was too late, for he had gone, gone, and left me the wreck you see; married another, after the most sacred promises to me. But I will be revenged. Yes; revenged to the uttermost. He has known my love; now he shall learn my hate. I will drag him down—down, even as he has dragged me.' It is impossible to convey the emphasis with which all this, especially the latter part, was said. I could see that the spirit of revenge was in her, its fire burning her very life out.

'Still,' I said, 'you have not yet told me anything about the will. I am anxious to hear about that.'

'I am coming to it now; but I cannot talk any more to-night. See here; in this packet I have written a full history of the transaction. Take it and read it, and I will come again to-morrow at this time to complete the evidence. Now let me go, for I am very weak.'

In truth she appeared weak and almost ready to faint; so I gave her a cordial, and sending for a conveyance, handed her in, and bade her good-night.

Need I say that I hastened to my room to peruse the packet. I was far too anxious to delay. I found it addressed to myself, and inside headed: 'The History of the Will of Mr Charles Russel, as related by Jeannette Leclerc.'

*(To be concluded next week.)*

### THE AMERICAN PENCIL-TRADE.

THE pencil-works of the Dixon Company of New Jersey, established a few years ago, present to the visitor many of those novel features in the application of machinery which appear to be characteristic of nearly every industry in the United States. Graphite of great purity is found at Ticonderoga, N.Y., both in the form suitable for the manufacture of crucibles, and for the production of what are erroneously known as 'lead-pencils.' The graphite is reduced in mills to a fine impalpable powder, almost as mobile as water, and making the fingers as smooth as if they had been oiled. A process of mixing with a peculiar description of clay is then used, according to the degree of 'hardness' desired in the pencils; and the substance having been reduced to a dough form, one of the most curious processes of the manufacture is seen. The dough is placed in a cylinder, within which a screw works a well-fitting plunger, and at the bottom is a plate having holes of the shape and size of which the 'lead' is to be cut. As the coils of tenacious material issue from these holes, they are cut up in lengths equal to three pencils, straightened, flattened, and baked. It has been found possible to run a coil four thousand feet long without breaking; such a length of unbroken pencil material having been shewn by the Dixon Company at the Philadelphia Centennial Exhibition.

The Americans have in their own territory that Florida cedar which makers in Europe use so largely for pencils, and great quantities of the necessary timber are cut down for the Dixon Company. The cedar is brought home to New Jersey, not in logs, but in blocks seven inches long, and these again are cut into strips measuring three and a half inches wide by three-sixteenths thick. This last fact reveals two differences between the methods usually employed in Europe, for the pencil-slip is in this factory made of a width to yield six pencils, instead of being cut singly; and both halves of the pencil are alike; and not, as in the older method, one portion narrower than the other. Both sides of the pencil-slip are equally grooved; and the process of filling

the slips, which is done by hand, is exceedingly interesting. Each girl engaged in filling takes up a grooved slip in one hand, a bunch of the straight 'leads' in the other, and with a dexterity begotten of practice, very rapidly inserts six of the stalks in the slip. This being handed to a second girl, the latter receives from a third worker the second half of the slip, over which a brush of hot glue has just been passed. The two halves are brought together, each one, it will be remarked, embracing half of the 'lead,' and then, when a row of these slips has been filled, they are pressed under a screw-frame till the glue is dry. The next process is to smooth the ends where the 'leads' project, and then we reach another very interesting machine. In this machine a revolving cutter seizes the slip, and with two cuts removes the superfluous wood, separates the pencils, and rounds them into shape. The pencils fall from this machine in a continuous stream, or rather in six continuous streams, each pencil finished for use, and so smooth, it is alleged, that the finest sand-paper would scratch them.

American ingenuity is also seen in an arrangement by which the chips falling from this machine are sucked away by a 'blower' into the engine-room and consumed as fuel, with the result of keeping the place perfectly free from rubbish. The next curiosity is the 'counting-board,' a grooved board or table, on which, by rubbing a handful of pencils over it, and seeing that each groove is full, a gross of pencils can be accurately counted off in five or six seconds. Other ingenious machines are in use for staining and varnishing the pencils, stamping marks and names, and finally packing them in a singular and convenient method, the package being oval in shape. By the use of checks on the quantity of material given out, the Dixon Company boasts of being able to secure that if even one pencil of the eighty thousand made daily is abstracted it will be missed; and incidents are not wanting where this fact, being unknown and unsuspected, has brought people into trouble who thought that one pencil might be removed from amongst such large numbers. The rule of the house is, that if a pencil is missed from a room, every one employed in that room is discharged unless the pencil be found; and as there is a further rule that no one discharged shall in any case be re-employed, every one in the place is interested in securing the honesty both of visitors and co-workers.

A curious story is told of Mr Dixon, founder of the crucible manufactory to which the pencil-trade has within the last few years been added. In 1830 he proposed to make pencils, and actually shewed some in Boston, Mass., where he was told he must put European labels on them if he wished them to sell. Unlike most American inventors, he took such offence at this, that instead of persevering, he went home and resolved never to make another pencil. Now, the successors to the crucible business, having resumed the attempt, make pencils in such abundance and of such excellence, that while they can offer a cheap pencil at one-third of a cent, they make in all about four hundred different styles, in shape, quality, hardness, &c., and turn out so many pencils that it is calculated they produce one-third of the entire number used annually in the United States. This success in supplanting pencils of European make is attributed

to the adoption of that characteristic to which reference has already been made, the determination of American manufacturers to use machinery wherever possible in every branch of their work.

## ANIMALS I HAVE KNOWN AND LOVED.

BY A LADY.

### FIRST SERIES.

I NEVER remember the time when I did not love all living things. When a little child, I believed that trees and flowers had a sort of consciousness. I had a garden of my own—a little plot in my father's large one; but all the lovely flowers he could procure for me were planted there; and as I tended them with the greatest care, I thought every individual plant knew me, and looked to me for love and attention. I could not have passed them by without a kindly word, and never failed to give to each its proper share of the treasures of my watering-can.

For some years I had not any particular pet of my own; I do not know why, but such was the case, until one evening when, as I was watering my spring flowers, I heard a loud noise in the kitchen-garden. I listened; and hearing the voices of one or two boys I knew, and thinking there must be some mischief on hand, I hastened down the garden, and found eight of them pelting something with stones. At first I thought it was a poor stray kitten. There had been a pit dug for some purpose, and when I looked down, I saw a toad lying at the bottom. This was what they were persecuting. My heart swelled with indignation. But what was a little girl against eight cruel boys! I tried in vain to reason with them, when a sudden thought came into my mind: Can I bribe them? I named one, and said: 'What shall I give you to go away and leave the toad alone?'

'What have you got?'

'I will give you sixpence.'

'No; that won't do.' And another stone was flung.

I knew if I left to get the gardener to help me, the poor toad would be worse used for my interference, so I said: 'I will give you all the money I have if you will come with me. You shall have my money-box just as it is. There is a shilling and threepence-halfpenny. Will you come?'

They hesitated awhile, and then one of them said: 'Let the lass have it, and we'll go and buy toffy and gunpowder.'

When they were gone, I looked down into the pit and saw the creature moving. It was the first time in my life that I had been called to feel pity and sorrow. Many years have passed away, and often since then has my heart been stirred to its inmost depths; but that night I believe God awakened in my bosom that horror of all oppression and cruelty that became a part of my being. Before this I had always felt a strong dislike to creeping things. I was not frightened at them; but had a shrinking objection to come in contact with them. What was I to do? If I asked the servants to help me, I knew they would laugh, and perhaps even kill the toad outright, to put it out of its misery; so I summoned courage, got a short ladder, and went

down to its rescue. It was sorely battered and crushed, and covered with mud; but I took it in my hand, covered it up in my pinafore, and went into a sheltered place to look at it. Having cleansed the mud from the poor creature, my next impulse was to hide it. There was a quiet place near my garden; so I fetched a small box, and gathering some of the grass that had been mown from the lawn, I placed my little sufferer in safety. Not daring to go and visit it before I went to school next morning, for fear of attracting attention, it was late in the afternoon when I saw it again. It was almost dead. I took some bread and milk, and placed it near; but I never knew if it partook of the food I gave it. However, I made a friend of the gardener, who promised to see that no one harmed it; and with his assistance we made it a very comfortable sheltered home, which seemed to revive my rescued one.

There were some very pretty fields near my father's house. It was my custom to go and sit on a stile leading into them, and learn my lessons, or read some favourite book. One bright Saturday afternoon I had gone there, and having by this time overcome all my early scruples regarding 'creeping things,' I took my now companionable toad with me in a covered basket. I sat and talked to it, watching all its movements, and now and then singing to it a low soft song. I saw two gentlemen coming towards me; and rising to let them get over the stile, one of them stopped and said: 'Well, little warbler, what have you in your basket? Is it a pet kitten?'

'No sir,' I said. I felt very awkward, and somewhat ashamed. But as I saw his kind eyes looking down upon me, my heart gained strength, and I lifted the lid off the basket.

'A toad! Where did you get it, and why do you keep it? I thought little girls ran away and screamed when they saw frogs and toads.'

'I bought it,' I replied.

'Bought it, child! Why did you buy it?'

'Because it was so hurt and so helpless! I gave all the money I had to save it from some cruel boys, and now I love it dearly.'

I shall never forget the kind look of George Moggridge, who, under the name of 'Old Humphrey,' has written some charming works on natural history. 'My child,' said he, 'as you go through life, always be the friend of the injured and the helpless. May God bless you!'

He asked my name; and as he knew my father, it was not long before he came to see me. We had many long talks together, and to him I owe more than I can tell. He told me to make animals, birds, and as far as I could all living things, my study. Adding: 'You will never find any two even of the same species alike; all have their separate characters.' This I have found to be true in every respect. Each has its own individuality.

Autumn passed; winter came; and I had a severe illness which kept me from the garden. I was in sore trouble about my little friend; and as the gardener never saw it, we concluded it had disappeared altogether. At length, one evening in spring, while walking in my little garden, I perceived something moving. I looked, and then called very gently: 'Toadie, toadie! Is it you?'

Gradually the something moved from its shelter among the primroses, and came close to me. The

toad! I talked to it until I heard some one coming, when it moved away, for its hearing was evidently as acute as mine. Often I saw it. It would always come if I called, unless, as I supposed, it had strayed away from its usual haunts into the kitchen-garden.

About this time I was absent from home for some time. When I returned, my first inquiry of the gardener was: 'Have you seen my toad?'

Nothing had been seen of it, so I almost despaired of ever seeing my little favourite again. It was my custom to go with my father in the evening to cut asparagus for supper. The place was close to the strawberry beds. I had gathered the asparagus and was returning, when I thought I would pluck some strawberries; and while I was doing so, I saw something moving among the leaves. I pushed them on one side. There was a toad! Could it be mine? I looked, and then gently called: 'Toadie, toadie! Is it you?'

The creature looked—came slowly along. I placed my hand upon the ground. It drew itself upon it, and gazed into my face, with what I could not help thinking was a look of loving gratitude, as I raised it.

I carried it in triumph to shew to my father, who said laughingly: 'But are you sure it is your old friend?'

I had only to point to the cruel scar upon its back. He looked at it and at me in mute astonishment.

Soon after this I went to London, and was absent twelve months. When I returned, my father had left his house and gone to reside in another part of the country. So I never saw my little friend again.

Before passing on to other animals, I should like to refer to the power of music upon them, affecting them so differently. Some rejoice, and are evidently happy when listening to it; while others shew unmistakable dislike to the sound, suffering from nervous distress. A remarkable instance of a toad's enjoyment of music came under my notice some years since. I was on a visit with my husband and one of my daughters to my father, who lived in the south of England. He had a very pretty garden and lawn; and it was his delight in the evening to sit at his drawing-room window while I played on the piano, and sang to him. One evening he said to me: 'My dear, here is a toad under the window. It has been here a long time without moving. I believe it is listening to your singing.'

When I ceased playing, the toad slowly crept away; but every evening when I sang, the creature came, took its place under the window, and there remained. One evening, at my father's request, I suddenly stopped the music, and in a few minutes it went away. We watched it until it reached the path; when commencing another song, it stopped, listened, and then slowly returned to its place under the window. When I left and went home, there was no more music. The toad was never again seen.

Some years previous to my marriage, my father lived in an old Hall in the neighbourhood of one of our large towns. The grounds were extensive. It was his delight to have a sort of model farm, which gave me many opportunities of

studying the different characters of the various animals upon it. Then I saw the influence of music upon many of them. There was a beautiful horse, the pride and delight of us all; and like many others, he had an unconquerable dislike to be caught. My father had so trained him to obedience that he gave very little trouble; a whistle and a wave of the hand, and Robert would come quietly to be saddled. But if left to our old gardener Willy, he would lead him a chase, generally ending in defeat. One very hot summer day I was sitting at work in the garden, when Willy appeared streaming with perspiration.

'What is the matter, Willy?'

'Matter enough, Miss. There's that Robert, the uncanny beast; he won't be caught, all I can do or say. I've give him corn, and one of the best pears off the tree; but he's too deep for me—he snatched the pear, kicked up his heels, and off he is laughing at me at the bottom of the meadow.'

I was very sorry for the old man; but I did not clearly see how to catch the delinquent. I could well believe he was laughing at our old friend, for he was a curious animal.

'Well, Willy, what can I do? He won't let me catch him, you know.'

'Ay, but Miss, if you will only just go in and begin a toon on the peanner; cook says he will come up to the fence and hearken to you, for he is always a-doing that; and maybe I can slip behind and catch him.'

I went in at once, not expecting my stratagem to succeed. But in a few minutes the saucy creature was standing quietly listening while I played *Scots, wha ha'e wi' Wallace bled*. The halter was soon round his neck; and he went away to be harnessed quite happy and contented.

There was a great peculiarity about his taste for music. He never would stay to listen to a plaintive song. I soon observed this. If I played *Scots, wha ha'e*, he would listen well pleased. If I changed the measure and expression, playing the same air plaintively, as for instance in *The Land o' the Leal*, he would toss his head and walk away, as if to say: 'That is not my sort of music.' Changing to something martial, he would return, and listen to me.

In this respect he entirely differed from a beautiful cow we had. She had an awful temper. Old Willy used to say: 'She is the most contrariest beast under the sun.' If she were in one of her ill-humours, it was with the greatest difficulty she could be milked. She never would go with the other cows at milking-time. Nancy be milked with *them*!—that was a thing not to be thought of. She liked the cook; and when not too busy, cook would manage Miss Nancy. But if she were not very careful, up would go Nancy's foot, and over would go the milk-can and its precious contents. When the cook milked her, it was always close to the fence, near the drawing-room. If I were playing, she would stand perfectly still, yielding her milk without any trouble, and would remain until I ceased. As long as I played plaintive music—*The Land o' the Leal*; *Home, Sweet Home*; *Robin Adair*, any sweet tender air—she seemed entranced. I have tried her, and changed to martial music, whereupon she invariably walked away.

I could give many instances of a love for music in animals. I will give another. I was sitting in the drawing-room one evening singing to mamma. It was a double room, with folding-doors. She was in one where there was a lamp. In my room which was unlighted, the window was open, and close to the window was a stand for music. When I ceased playing I heard a peculiar sound, and was conscious there was something in the room. I called for a light. There sitting on the stand was a large white owl. He looked far less surprised than we did. In a minute or two he stepped quietly out of the window, and flew away. After this we did not leave the lower sash of the window open; but the owl still came, and sat upon the stone outside, listening.

My father's poultry-yard was divided into one for the fowls that were kept for domestic use, and into another for those that were laying, together with fancy poultry of all kinds. I was fond of feeding them, and studying their various habits and dispositions. I soon observed both in them and other animals a marked likeness to human beings. One very ludicrous resemblance I found in a large white cock to a fussy old gentleman of our acquaintance who was tall, gaunt, and selfish. The white cock was the same. I never saw him give a bit of food to any of the hens. He ate more than all the others, but he never grew fat. He walked about, taking no notice, that I ever saw, of anything but himself. He was a hateful bird. One day I had been watching him, and the resemblance to old Mr P—— struck me forcibly. I called to the cook, and said: 'Lizzy, who is that white cock like?'

She looked, and then replied: 'Why, old Mr P——.'

'Don't say anything, and I will see if any one else notices the likeness.'

I asked papa and mamma to come into the yard, and see if they recognised a resemblance to any one.

'Old Mr P—— to the life.'

Some time after this, my father told the gardener to kill the white cock. He meant a fine young one that was in the same yard. When the cover was removed at dinner, the bird was trussed as the custom was with its head under the wings—I suddenly exclaimed: 'Mamma, that is old Mr P——.'

Willy the gardener had killed him by mistake. I need scarcely say no part of its body was eaten at our table; and upon being removed to the kitchen Old Willy chuckled when it was placed before him, saying: 'I dunna care how many cocks and hens our young Miss calls after her friends, as long as I can have them for my dinner. I reckon it is the only thing old P—— was ever good for in his life.'

In the other yard was a game-cock, the most beautiful bird of the kind I ever saw. He had several wives, and it was a curious thing to see the different airs and graces of the ladies in his train. He was an inveterate fighter, if he could escape from the yard, which was surrounded by a high wall. By some means, an accident had happened to his foot, and he became lame. My brother, who was a medical student, advised us to poultice it. Mamma undertaking this, Ralph came every morning to have his foot dressed, and

though evidently suffering very much, allowed her to attend to it. But no improvement came, and the poor proud bird began to droop. One day we heard a loud noise; a famous game-cock had come into the yard when the gate was left open, attacked Ralph, and had beaten him severely. He was sorely injured, though he had defended himself well. Mamma picked him up and carried him away, but next morning he was out in the yard, warming himself in the sun. I was very glad I was there to see what I then saw, or I could not have believed it. Ralph had been beaten! He was no longer to be honoured by his faithless wives. They came first one by one, and then all together, looking with all the contempt they could display. One and another pecked at him; and at last the prettiest, and his favourite, went straight up to him and gave him a severe dab near his eye. But there was one faithful friend among them, an awkward bustling brown hen, with no pretensions to beauty, who flew to his rescue, stood resolutely before the prostrate bird—for he had sunk to the ground, as if heart-broken—and sheltered him with her wings. It was useless to leave him in the poultry-yard, so he and his faithful brown hen were placed in the garden, the tool-house being left open for them through the night. Some weeks passed, and Ralph grew weaker, till one morning we found him dead. A grave was dug, and his faithful wife saw him placed in it. She was taken back to the yard; but she never rallied; and a few days after we saw her lying cold and lifeless on the spot where the friend of her generous heart lay buried.

#### THE INTOXICATING PROPERTIES OF THE HEMP-PLANT.

It is known to many, though not perhaps a matter of general knowledge, that the hemp-plant supplies Asiatic natives with a cheap intoxicating stimulant. Mohammedans, Hindus, Sikhs, and others whose religion forbids them the use of alcohol, find in this plant a substitute so perfect as to reconcile them to keeping the letter of their law; not caring much in this or any other respect for the spirit thereof.

Hemp has nothing pleasant in its taste, and therein lies at a disadvantage with many forms of alcohol; and when mixed with tobacco and smoked in the hookah, it has an exceedingly unpleasant smell, that clings for some time to buildings.

Its effects are very different from those of alcohol, acting powerfully on certain parts of the constitution when taken in excess, but being less generally injurious, though in extreme cases it produces temporary madness. It may also be taken in decoction, or in a solid form is put into sweetmeats. In ordinary doses it is merely a gentle and pleasant stimulant, and excites none of the brutal coarseness produced by alcoholic excess, though quarrelling sometimes results from over-indulgence.

Probably there is nothing so powerful as hemp for annihilating fear. It is very generally taken by the sepoy of India before entering into action, and

Mohammedan fanatics brave death under its influence. This latter excitement has been common in Afghanistan lately. Afghans believing that paradise awaits them if killed while fighting the Infidel, have deliberately intoxicated themselves with this drug and rushed into our camps—to which the country-people were allowed entrance for the purpose of selling provisions—cutting down all who came in their way till they were themselves killed, or taken alive to be tried by drumhead court-martial. In our petty wars with the hill-tribes in that region determined rushes have often been made on us by small bodies of men similarly deadened to fear by the free use of hemp!

Sometimes the effect of the drug is very curious. The writer saw a trooper of a Bengal Lancer regiment one morning on the line of march, while the horses were at the walk, suddenly wheel his horse round, and bringing his lance to the charge, gallop down the ranks from his place near the head of the regiment, scattering the men right and left, who, however, all managed to get out of his way, as he made no determined aim at any one. He continued his career down the road, till he was chased and caught. He was quite mad for the time being; and on arrival in camp, not knowing what to do with him, they tied his arms and legs, and then fastened him by a rope to a tent-peg firmly driven into the ground. He then fancied himself a horse, and commenced grazing, which they allowed him to do, as it kept him quiet. By evening he was all right again.

Not far from Cawnpore there was a large tank where two or three other men and I used to fish. One evening while so engaged, a native from a village close by came quietly behind one of our party who was intently watching his float beginning to bob, and deliberately hurled a great brick-bat at him, which luckily only grazed his head without doing any damage. The ruffian was soon in the hands of the village policeman, who put him in the stocks, and then informed us that the wretch was under the influence of hemp, which a certain set in that village were particularly addicted to, and for whose benefit the stocks had been introduced.

A young English officer at Delhi once thought he should like to try the effects of hemp on himself, but unfortunately took more than he intended; and bareheaded, on a scorching day in May, he sped down the road, armed with a large knife, and attacked a poor bullock, which was the first thing he met. Luckily, a guard of the Rifle Brigade was at hand, so he was quickly disarmed, taken home, and put in charge of the doctor, who shaved his head and applied ice, which brought him round. At the native Indian nautch or dance performed by professional dancing-women, hemp is often handed round in sweetmeats to the guests, to add to the dreamy mesmeric effect which it is the object and intention of the rhythmic motion of hands and feet of the dancers with their monotonous song, to produce. This intention of the dance is generally unknown to Europeans in India, who do not therefore lend themselves to the effect, and find the affair extremely wearisome and slow; while to those who understand it, it is not at times unpleasant, though of an enervating tendency if frequently indulged in.

#### EFFECT OF COLD ON THE NATIVES OF THE TROPICS.

A striking commentary on the effect of cold upon natives of the tropics is to be found in *My Chief and I*, a book just published by Chapman and Hall. Colonel Durnford, colonial engineer, was on the Drakenberg with a party of Basutos, and a number of prisoners of the Putini tribe, who were employed in stopping the passes into Natal. A snow-storm with a bitter wind came on, and at once the natives collapsed. The Putini men felt it most. Nothing could induce them to stir. They lit no fires, cooked no food. It was impossible to do anything with them even for their own comfort. At last, finding that even when the order was given to march down into the warm valley, they did not move, the Colonel had the tents pulled down over their heads. Still they lay helpless, crying: 'Let us die, Nikos; only let us die.' The white men of the party were ordered to force them out, and they were found perfectly paralysed. There was no sham about it; 'their brown skins were white with cold.' It was with the greatest difficulty they were got down the mountain to the valley, where there were plenty of old bushmen's caves for them to shelter in.

Natives of the Hindustan plains are even less able to endure sudden cold than Africans are. The present writer has known cases of coolies, the honestest and most faithful messengers in the world, actually dying in the Ghauts through being caught in a piercing wind such as they, Madrassees born and bred in the low lands, had never before experienced. While, therefore, hasty reasoners were hard in the case of the *El Dorado* lascars, better informed people felt that the real fault lay with those who put the poor fellows into a position for which they were by nature wholly unfitted. Let any one who has a garden try to gather a few turnips or cabbage leaves when they are covered with frozen snow, and he will be able to form some notion of what it must be for those who were nurtured in latitude fifteen degrees, to be for hours handling frozen ropes.

#### T-O O S O O N.

SHE came, how sweet and fair she came  
To our rude earth, and stayed awhile,  
A tender spirit, free from blame,  
And lit with an angelic smile.  
Ah me! that smiles so sweet should fade  
From lips that in the grave are laid.

She was so young, the light intense  
That seemed to guard her from her birth,  
Spoke but of stainless innocence,  
And purity too great for earth.  
Ah me! that light so pure should fade  
From eyes that in the grave are laid.

And then she left us, as a bark  
White-winged sinks dimly from our sight,  
Or as some sweet song-burdened lark  
Soars upward to the realms of light.  
Ah me! that youth and hope should fade  
When beauty in the grave is laid.

## RECOLLECTIONS OF AN EQUESTRIAN MANAGER.

BY CHARLES W. MONTAGUE, MANAGER OF NEWSOME'S CIRCUS.

### FIRST PAPER.

THERE has been no attempt to adhere to any special plan in the arrangement of the following anecdotes. They are written in almost the same order in which the memories themselves have recurred to mind in moments of leisure; and that those moments are not too plentiful, must be some excuse for shortcomings.

The aim of the equestrian performer is to amuse and to interest, and that is all; while the actor goes far beyond this; at one moment splitting our sides with mirth, at another reading us a moral lesson, and at another harrowing our souls with the dread outpourings of the tragic muse. To no such heights as these does the equestrian aspire. If he amuses, he is content; and no loftier ambition prompts the writer of these pages. To interest and amuse is his sole desire, and he will be well satisfied should the verdict be that in this he has been successful.

In the great majority of cases, the members of my profession are brought up to it from their childhood, one might almost say from their cradle. For even before the junior members of the company are brought into actual training, they are in many ways absorbing into their nature a strong predilection and aptitude for the pursuits of their parents. But at the same time, our ranks are largely recruited from without by people of various ages, and under circumstances quite as various.

Speaking more particularly of my own early career, I was during my youth entirely unconnected with circus matters; but I was when quite young brought into frequent contact with horses at my father's extensive stables, and attribute to this circumstance the tastes which afterwards grew upon me. I was born in the City of London, 'within the sound of Bow Bells,' at an ancient hostelry which had been in the possession of our

family since the Great Fire of London; the premises having been built the year after that catastrophe, and pulled down only a few years ago, to make way for local improvements. It was a great coaching-house; and in addition to that, my father kept a large number of post-horses and vehicles, a branch of which business he also conducted at Reading. I remember well, when a mere lad, watching with particular interest the daily arrival of the Dover mail with its steaming foam-covered team, as it entered the large courtyard of the inn, with its dark wooden gallery, leading to the many rooms of the straggling premises. It was from this house that the Dover mail started regularly until a few years ago, when the opening of the London, Chatham, and Dover Railway rendered its services, even its existence, no longer necessary. So far as I am aware, this was the last mail that ran out of London.

Whether here or at Reading, I was always in the stables—except when at school or in bed—watching and helping the grooms, or tending my favourite horses, which I would feed and caress and occasionally ride about the yard. As I grew up, I not only acquired a thoroughly practical knowledge of the horse, of his ailments and their remedies, of his tempers and how to manage them; but I likewise imbibed a genuine love for that noblest servant of man. In after-years, having been brought into frequent intercourse with many who were connected with circus life, it so fell out that, by the time I was eighteen years of age, I had acquired as great a knowledge of circus matters as some who had followed the calling all their lives.

I must not omit to mention one circumstance of an interesting nature connected with my boyhood. Though born in London, and a freeman of that city, I passed my early life, as I have already said, partly at Reading; and was there educated at the well-known school belonging to and conducted by the Misses Welch. The school is still carried on, though under different management. Whilst I was there, one of the assistant tutors was a Miss Harper, whose father

had formerly kept a school at Barnard Castle, Yorkshire. When Dickens's *Nicholas Nickleby* was published, with its description of Dotheboys Hall, of its owner the immortal Mr Squeers, and his daughter Miss Squeers, of brimstone and treacle celebrity, it was at once perceived, or supposed, by those who were acquainted with Mr Harper's school, that it was the veritable prototype of Dotheboys Hall, and that the proprietor and his accomplished daughter were the great originals of Mr and Miss Squeers. Parents of the pupils there made inquiries into matters, and withdrew their children. The school was ruined; and 'Mr Squeers' brought an action against the publishers of the offending book. 'Miss Squeers,' finding her occupation gone—so far as Barnard Castle was concerned—had to find a snitable field for her labours elsewhere, and entered the establishment where I was a pupil at Reading.

In a wandering life like ours, the vicissitudes of fortune are endless. At one time the strolling 'professional' may be down on his luck, as it is called; at another he may get an unexpected lift which, if taken due advantage of, may for the time-being alter the whole tone of his life. The following anecdote is a case in point. I have entitled it Harry Graham as a Wizard.

Before I joined the circus of the younger Ginnett, of circus celebrity, in 1860, I had made the acquaintance of several members of the company travelling with Mr Ginnett's father. Early in the spring of 1859 some business took me into the neighbourhood of Whitechapel, and while passing the *London Apprentice* public-house, I heard my name shouted, and looking round, espied Harry Graham, whom I had known as a clown in the elder Ginnett's circus. He was doing a conjuring trick outside a miserable booth, at the same time inviting the public to walk in, the charge being one halfpenny. On the completion of the trick, he jumped off the platform, and insisted upon adjourning to the public-house, where he explained the difficulty he was in through having been laid up all the winter with rheumatic gout. On his partial recovery, he was compelled to accept the first thing that offered, which was an engagement with the owner of the booth, a man known in the profession as the 'Dudley Demon.' Poor Harry begged me to give him a start; so, knowing him to be a fair hand at conjuring tricks, I came to an arrangement to take him through the provinces as M. Phillipi the Wizard. This was on a Friday. On the following Wednesday, so quickly had our arrangements been completed, my conjurer appeared at Ramsgate to morning and evening performances; the former netting eighteen pounds, and the latter fourteen pounds; our prices being three shillings, two shillings, and one shilling. Yet in Whitechapel this same man would not have earned five shillings a day!

Among other places we visited was Dartford, where I took the *Bull Hotel* assembly-room, which had been recently built, but not yet opened. Mrs S—, a lady of considerable distinction, kindly gave me her patronage, and I arranged for a band from Gravesend. On the day of the performance, towards the afternoon, as the band had not arrived, I sent my assistant to Gravesend with instructions to bring the musicians with him.

At half-past seven, the time announced for opening the doors, a large crowd had assembled, as much out of curiosity to see the new room as to witness the performances; so in a short time every seat was occupied. Just before the clock struck eight—the time for commencement—my assistant came rushing in with the intelligence that the band had gone to Dover to a permanent engagement. I ran round to the stage-door and told Graham. He said it was impossible to give the entertainment without music of some sort to carry it off. In my despair I rushed into the street, intending to go to Reeves the music-seller and hire a piano-forte. But I had not gone far when I heard a squeaking noise, which upon approaching closer, I found to proceed from three very dirty little German boys, one playing a corneopean, another a trombone, and the third a flageolet. On accosting them, I found they could not speak a word of English; so I took two of them by the arms and dragged them along, leaving the other to follow his companions to their fate. On reaching the building, I could hear the impatient audience making a noise for a start. Harry Graham, on seeing my musicians, said it would upset everything to allow them to be in sight of the audience. 'I can manage that,' I said; 'we will just put them under the stage, and I will motion them when to strike up and when to leave off.' In another moment M. Phillipi was on the stage and received with shouts by the audience. At the conclusion of the performance, I went to the front and thanked my patroness, Mrs S—, for her kindness. 'Ah!' said that lady, 'he is very clever. But oh! that horrid unearthly music!'

On finishing the watering-towns, I returned to the metropolis and took the Cabinet Theatre, King's Cross, where M. Phillipi appeared with success. One evening, to vary the performance, we arranged to do the 'bottle-trick,' and specially engaged a confederate, who was to change the bottles from the top of the ladder through one of the stage traps over which the table was placed. By some error the man took up his position there the moment the bell rang for the curtain to go up, instead of waiting until the commencement of the second part of the entertainment. Commencing his usual address, M. Phillipi explained to the audience that he did not use machinery or employ confederates as other conjurers were wont to do; and to convince them, he leaned over the front of the table and pulled up the cloth which hung to the ground, exclaiming, at the same time: 'You see there is nothing here but a common deal table.' To his surprise, the audience exclaimed: 'There is a man there!' But he was equal to the occasion, and went on with his address, taking an early opportunity of giving the confederate a smart kick, which sent him into the depths below with more haste than he had bargained for.

At this establishment, while under my management, the earthly career of Harry Graham was brought to a close. For many years it had been his boast that his *Richard III.* was second only to Edmund Kean's, and that he only lacked the opportunity to astound all London with his impersonation of the character. Now, when the opportunity had arrived and he had determined to play it for his benefit, the excitement caused by the realisation of this dream of years was too

much for him; he died, poor fellow, a few days afterwards. Those who are curious about the last resting-place of this really admirable showman, will find his grave in the Tower Hamlets Cemetery.

At the end of 1860 I joined Ginnett's circus at Greenwich, and found the business in a wretched condition; the principal cause of this being that the circus had only a tin roof and wooden boarding round, and owing to the severe weather, could not be kept warm. I was at my wits' end to improve receipts when, being one day in a barber's shop getting shaved, the barber remarked: 'There goes poor T——'. Upon inquiring, I was informed that the gentleman who had just passed the window had been M.P. for Greenwich; but owing to pecuniary difficulties, had been obliged to resign. My informant added that he was a most excellent actor, having performed *Richard III.* and other plays with great success. What was more, he was an immense favourite in Greenwich and Deptford, having been the means while in the House of Commons of getting the dockyard labourers' wages considerably advanced. It immediately struck me that if I could get the ex-M.P. to perform at our circus, it would be a great hit. With this object in view, I waited upon Mr T—— the next morning, and explained my object. 'Heaven knows,' he said in reply, 'that I want money badly enough; but to do this in Greenwich would be impossible.' I did not give the matter up, but pressed him on several occasions, until at last he consented to appear for a fortnight as *Richard III.* upon sharing 'terms.' The next difficulty was to provide actors for the other leading characters in the piece, there being no one but Mr Ginnett and myself capable of taking a part. This difficulty, however, we got over by cutting the piece down, and 'doubling' for the parts; Mr Ginnett and myself appearing as Richmond, Catesby, Norfolk, Ratcliffe, Stanley, and the ghosts. Notwithstanding these drawbacks, the business proved a great success; so much so, that Mr T—— insisted upon treating the whole company to a supper. Shortly after this he went to America.

We now made immediate preparations for our journey by road to Cardiff, which had been arranged some time previously. In summer, such a journey has many attractions; in winter, it is as a rule dreary, uncomfortable work. But in such a winter as that of 1860-1 it was something to be remembered for a lifetime. A month's frost had preceded Christmas; snow lay deep on the ground; a partial thaw, followed by a frost still more intense, had rendered the roads almost impassable for any kind of traffic, more especially so for the large and cumbersome vans with which a circus moves from place to place. To make matters still more uncomfortable, the ample funds placed at my disposal for the entire journey to Cardiff ran out more quickly than they should have done, and as a natural consequence I had afterwards to cut and contrive in various ways, not adding very much thereby to the comfort of our company. But I am anticipating.

Our first resting-place was Maidenhead, a town which we reached on Sunday. Going straight to the *White Hart*, the principal hotel of the place, we applied for admission, but were refused. In

face of this unexpected rebuff, I tried other hostels, but these all followed the lead of the *White Hart*. My only resource then was to go to the superintendent of police, who, after receiving my statement, accompanied me to the nearest magistrate. This gentleman, with great courtesy and promptitude, immediately sallied forth into the bitter cold, and came with us to the *White Hart*, outside the closed portals of which the members of our company were awaiting my return, like Peris at the gate of Paradise. The magistrate at once ordered the premises to be opened to us, which of course was immediately done. The moment the other hotel-keepers saw the *White Hart* throw wide its doors, they flocked round me with pressing offers of entertainment for man and beast. But I at once decided that as all the hotels alike had refused to take us in, and the *White Hart* alone had suffered the ignominy of magisterial coercion, the *White Hart* alone should benefit by our presence.

Departing from Maidenhead, we continued our westward course. Funds, as I have already suggested, were being expended more rapidly than was warranted by the distance we had travelled, considering that I had to make what I had last the whole journey, or be censured for a bad manager if I applied for more. The commissariat was in a woful plight; an insignificant matter in genial weather, but a most trying hardship when exposed to all the severity of an arctic winter. In the midst of such trials as these, however, we could make our joke, good-humouredly comparing our journey with the disastrous westward flight of Napoleon across the Russian wastes; and as the 'Retreat from Moscow' this episode has ever since been alluded to by those who took part in it.

Continuing on our way, we passed through Cheltenham, where we found Myers's Circus performing; then through Gloucester and Newport; and finally brought our tedious and wretched journey to a close at Cardiff. We had lost six valuable horses on the road, victims to short-comings and severe weather combined. Ginnett, however, in spite of these unpleasant drawbacks, was sanguine and full of the coming business. So we set to work with a will, to make amends for past ill-luck, and secure a successful season in our new location.

## A LIFE'S ATONEMENT.

### CHAPTER IV.—AUTOBIOGRAPHY.

*Suddenly, I beheld the stranger, bodily, of yesterday afternoon.*

ALL day I was haunted by the memory of the face. It moulded itself so severely that afternoon, and so terribly in the night which followed, that to this very day I remember it more clearly than I remember any other countenance I ever saw. It was less the figure than the face. The figure was blurred and dim even then; but every line and tint of the face was cruelly clear.

That afternoon, Sally took me to the neighbouring town, and to a huge emporium of ready-made clothing there. In a retiring-room of that establishment I was wedged tightly into a suit of clothes, in which I reminded myself vaguely of a

rhinoceros, whose pictured semblance I had somewhere seen. A great many other purchases were made, and for Sally the day was a busy one. It lay somehow upon my childish conscience that I had allowed one of my school-fellows to be accused of a crime he had not committed; but I was so perfectly assured that Sally would not in the least understand me if I tried to tell her what had really happened, that I forbore from saying anything at all about the stranger. Possibly he was with me all the more on account of the very secrecy in which I felt myself compelled to harbour him. At least I know now that his face, in some strange inexplicable way, mingles for me with the rolling noises of a great town's traffic; with the first glimmer of the gas-lamps in a crowded street; with the rattle of a railway journey; with a hundred of the new experiences of that afternoon, which have since renewed themselves countless times, as such experiences will.

The face identified itself then, and remains identified now, with the flickering of the fire; with the quiet of the room; with the solemn ticking of the clock; with the voices and the footsteps of casual passers-by outside; with the winding stairway; with the sparsely furnished bedroom; with the glimmer of the departing light; with the darkness and the silence which ensued. As I can see it now, I can translate it as the face of a man with no settled purpose possible. I can read in it nothing but blind fear and horror and despair. And if it touches me so now, is it a thing to be wondered at that it haunted me so many years back, like an evil ghost?

When, by Sally's aid, I had rewedged myself into my unaccustomed garments, and stood cumbrously in the middle of the kitchen, awaiting the advent of yesterday's visitor, the face seemed to be still there. But when we were all three inside the cab and I was seated on the stately lady's knee, and we had reached the station door, suddenly I beheld the stranger, bodily, of yesterday afternoon! I knew him directly, though he was much changed. He was no longer well dressed, but was attired in a suit of moleskin, and a pair of clay-soiled boots, and an old battered wide-awake hat, and a dirty flannel shirt. I noted too that the stranger recognised me.

I had not up to this time been able to realise in any measure the relationship between the stately lady and myself. If she had been younger, my knowledge of fiction might have come to my aid, and she might have been the Fairy Peribanou, or the Princess Badroulbador, or any of the thousand-and-one *inamorâtes* of *Gil Blas* or *Roderick Random*. How innocent the childish fancy is! How incomplete and how complete at once! The better part of a book read in childhood is a legacy left by the child to the man. It is only the man who can find the dross of it and the folly of it, and can incorporate that dross and folly—not the child.

But she had talked to me in such a kindly and

motherly way, and her face was so eminently lovable and gracious, that I had already overcome my first shyness, and with that impulsive certainty which is the best dowry of the childish heart, had already thrown myself, quite securely, upon her love and protection. And so it was something of an added wonder to notice that the eyes of yesterday's stranger, when they left mine and rested for a moment on her face, should assume a double horror, and that with a sudden exclamation the stranger, turning, should beat an instant retreat, and be speedily forgotten by all but me.

We all three rode together; Sally sitting stiffly upright and rigidly unobservant in one corner of the railway-carriage, and I seated for a considerable part of the journey in the lady's lap. I cannot remember that up to this time I had known any of those playful endearments which mean so much to children. I have no memory whatsoever of my parents; and Sally, though I can never underprize her affection, had not many of Love's outer graces. Personally, she was of a broad and bony pattern, and had more angles on her than I have ever seen upon a human structure since. She was very hard and red in face and hands and arms; and had a curious roughness on her skin, as though she were in the habit of drying herself with a file whenever she washed herself. She was a tearful creature too, and when she felt any especial affection for me, would take me on her lap and would put those rough red arms about me, and cry over me for half an hour together. So that, upon the whole, I am afraid I rather evaded than courted any demonstration of her love. But the lady, as we rode together, pointed out this, that, and the other object on the way which she thought might interest my childish fancy, and had, for all her stateliness, a thousand of those endearing and graceful ways which make a woman the proper guide and companion of childhood. And thus it came about that the phantom face was destined to represent and to be associated with one other experience; and thus, even now—so firmly do these childish memories cling—that face is mixed with my first experiences of the pleasures of affection; and even now—so firmly does the childish memory cling—the pleased laugh of a child brings back that sombre phantom to my mind.

There was another association which the face took during that journey, and which I have not yet forgotten. Sally, inspired, I suppose, by a sense of the new character of our relations, addressed me whenever she spoke as Master Campbell, and alluded to me always in the same distant phrase. There was to my young spirit something so forlorn and alien and foreign in the sound, that after it had been repeated once or twice I lay down, and under pretence of going to sleep, covered up my head and had a cry about it. But Sally—bless her kindly heart!—saw it all, and when my aunt had left the carriage in pursuit of refresh-

ments at a great station at which the train rested, and took its own refreshment in the shape of coke and water, the faithful creature lifted me from the corner in which I lay, and said: 'There; I won't do it again, deary. Wipe your eyes. Here's your aunt comin'. There; run and look out o' window. It shall be Johnny when we're by wereselves.'

Somewhat comforted by this assurance, I stood at the carriage-window and looked out on the landscape until I made myself believe that we were standing still; whilst the near country waltzed quickly by us to a lively tune, and the distant country paced slowly on to a sad one. Both the sad tune and the lively one were made by the rolling and rattling of the wheels, and the sad tune came in with a single note at the end of every second bar of the lively tune. I amused myself by keeping them distinct, and by making both the near and distant country keep time to their rhythmic throb. Then I invented a new joy which was almost equal to that of the clay pit. I closed my eyes until I found myself undetermined for a moment as to the direction in which the train was going, and then, by an effort of will, reversed its motion. When the delusion was complete, I opened my eyes, and the delicious delirious shock with which the panting monster of an engine suddenly reversed himself, and bore me onward, instead of bearing me backward, was a thing not to be described.

At a station at which a red-whiskered and sanguine-complexioned porter bawled out 'Hetherton,' we alighted, and a man on the platform touched his hat to my aunt. He wore a queer black star at the side of his hat, and was dressed in a drab livery. He was the first liveried servant I had seen. I took him for some tremendous functionary, and his evident respect for my aunt made her almost awful in my eyes. What my aunt said to this man I did not catch, but I heard him answer: 'No ma'am. Mr Fairholt's coming down by the next train from town, ma'am, and I'm here to meet him.'

'Very good,' said my aunt, and so left the platform, and walked before us through the station and stepped into a cab. She said nothing to the cabman; but he went into the station and brought back with him our luggage, which my aunt had already pointed out to a porter. When he had put the luggage on the top of the cab, he mounted, and drove us away without a word of instruction; from which I argued that my aunt was well known there. The road ran for some distance between fields; some of these were newly ploughed, and in others the stubble was still standing. The hedges were almost bare of leaves, and the roads were wet with recent rains. The skies were gray, and the clouds hung low; and the wind tossed and tousled the boughs as if it had a restless spite against them. Then for a time the road ran past a broad and turbid river, and then through lanes again, until we crossed a wooden bridge, passed through a wooden gate, which the cabman

got down to open, and went by a firmly gravelled carriage-way round the lawn, which lay in front of a large and stately house of red brick. This house was quite invisible, by reason of the trees which thronged about it, until we came upon the carriage-drive; and was half hidden, even then, by a thick and clustering growth of ivy.

The cabman having been dismissed, I was taken by my aunt into a room on the ground-floor. I had never until that day consciously even dreamed of such an apartment. It seemed to me unspeakably magnificent. It had pictures and a piano and a rich carpet and a marble mantel-piece and a great mirror, and a number of articles of furniture of which I knew neither the uses nor the names. Curiously enough, in the midst of all its strangeness, I was as perfectly certain that I had seen it before as I was that I was there. There was a bright fire burning in the grate; and notwithstanding what seemed to me the grandeur of the room, it looked very homelike and comfortable. The whole of one wall was lined with books.

'You must stay here for a little while,' my aunt said as she kissed me and smoothed my hair. 'Can you read?'

I answered shyly: 'Yes.'

'Can you?' she said. 'Let me hear you;' and took up a book from the table.

It chanced to be a volume of Coleridge's poems, and opened naturally at the *Ancient Mariner*. I began:

'It is an ancient mariner,  
And he stoppeth one of three.'

She laughed a little, partly in surprise, and partly, I fancy, at my uncouth accent, and said: 'O yes. That will do nicely. You can go on reading, if you like.—This book,' she said, tapping a volume with her finger, 'is full of pictures. You may look at it.'

But I had no appetite for the pictures just then, and was eager to know more of the *Ancient Mariner*, and so buried myself in that story, and mixed my ghost up with it all, until with the weirdness of the poet's fancy and the terror of my own I grew quite frightened. How long my aunt had left me alone, I cannot say; but I had just come to the end of the *Ancient Mariner's* story, when the door opened and a gray-headed old gentleman with a peevish face entered.

The old gentleman advanced towards me, and putting a hand on each knee, bent down to look at me, and asked me in a peevish voice: 'Well, my little man, and who are you?'

It came across me suddenly that my aunt was an embodied deception, who had inveigled me away from Sally, and had left me here as a prey to the gray-headed old gentleman. I was very frightened and nervous and unhinged, and I began to cry.

'O dear,' said the old gentleman, with face and voice more peevish than before; 'I can't have this—I can't have this.' Then he struck a gong, an action which filled me with the direst forebodings. The summons, however, produced nothing more dreadful than a pink-cheeked damsel in cotton print who had received us when we arrived.

'Who is?—Who is?'—So the old gentleman began in a nervous, fretful, irritable way. 'Who is?'—He seemed to give up the idea

of indicating me verbally, as an impossibility, and threw a hand towards me instead.

'I don't know, sir,' said the girl. 'He came with Mrs Campbell, half an hour ago.'

'Where is she?' asked the old gentleman in the same irritable way.

I heard the rustle of a dress outside, and the damsel answered: 'Here sir;' and my aunt appeared.

'Good-day, Robert,' she said.

The girl retired; and the old gentleman, indicating me again by a wave of the hand, asked: 'Who is this?'

My aunt settled herself in an arm-chair, arranged her dress, folded her hands, dropped her head back negligently, and responded: 'A protégé of mine.'

The old gentleman gave a feeble and a peevish start.

'Now, Robert,' said my aunt in a very calm tone, but with a decision and certainty which seemed quite natural to her, 'we will not discuss that question just at present. He ought to have been here—— Let us say, for example,' she said, arresting herself suddenly, and casting a glance at me, 'X. has been grossly neglected by A., whose duty it was to provide for him, and who knew perfectly well of his whereabouts. B. discovers A.'s neglected duty, and brings A. face to face with his responsibilities.' Then with a change of tone and another glance at me, she continued: 'This is your nephew, Robert—poor John Campbell's child.'

'Dear me, Bertha,' said the old gentleman, rubbing one hand fretfully with the other. 'Ties of blood are ties of blood!'

'That's a proposition I don't in the least dispute,' my aunt intercepted. 'I am glad to find that you admit it.'

'But I can't go about the country searching out all the paupers who happen to be within fifty degrees of me by marriage. Bless my soul!' said the old gentleman with anything but a voice of benediction, 'it's impossible.'

'If John Campbell,' said my aunt, with the same calm decision of tone, 'had said "Impossible!" when Robert Fairholt wished to borrow ten thousand pounds once on a time'—— She did not close the sentence, but waited as if watching its effect. The old gentleman walked up and down the room, taking three or four steps each way, and then pulling himself up with a jerk. There was an air of helpless exasperation about him, and he harried his gray hair peevishly with his hands.

'I suppose you will have your way, Bertha, since you have brought him here'——

'Since,' said my aunt, intercepting him again—'Since X. has been discovered by B., A. is left without option. Don't worry yourself over so simple a question, Robert.'

The old gentleman walked jerkily up and down the room again. It seemed to me as though every time he started, he had made up his mind to go for something in a great hurry, and that he pulled himself up less because he came to the wall, than because of a spiteful contradiction within himself of his own first purpose. After half-a-dozen turns, he suddenly abandoned this contradiction of his own design, and went out at the door. My aunt laughed in a short triumphant way.

'Come with me, John,' she said a moment afterwards, and led me to a room at the top of the house. In this room sat a little girl, a golden-haired, blue-eyed, pretty little creature, who gravely employed herself in cutting out a fantastic pattern from a sheet of brown paper with a tiny pair of scissors. To this young lady my aunt introduced me as a cousin.

'Cousin Mary and Cousin John,' said my aunt. 'Now, you young people must be very fond of each other. Won't you?' she asked, kneeling down between us and putting an arm round each.

I think I should probably be less embarrassed by an introduction at this time to a lady of my own years, though the introduction were couched in precisely similar terms, than I was then; and my embarrassment, so far as I remember, arose from a feeling that it was somehow a piece of dreadful presumption in me to be there at all, listening to a suggestion, and giving countenance to it by my silence, that such a young lady in such a house could possibly accept me on terms of equality, or could under any circumstances condescend to be fond of me. I felt as though in my own person I had been guilty of this invitation of her affections, and I hung my head. When I looked up, I saw that the little girl was surveying me in a critical but not unapproving way. She confirmed my impression of her opinion by saying calmly to her aunt: 'I like him,' and instantly crossing over and kissing me. 'He's like Fianty,' she said, as if in explanation. My aunt laughed, and kissed each of us, and went away. I stood in shy silence when she had left me, and Cousin Mary went back to the fantastic pattern in brown paper.

'How old are you?' she asked, with quite an air of years and patronage.

I told her.

'What's your other name?' she asked.

I answered again as nervously as though before a queen.

'Are you clever?' she questioned further. 'Do you know any tales? I shall like you if you know tales.'

This emboldened me, and I said Yes; I knew a good many. She dropped the fantastic pattern and the scissors on the floor, settled herself in her chair, cross-legged like a Turk, leaned back with closed eyes, and said with a sort of languid imperiousness: 'Tell one now.'

This sudden command more than renewed my first shyness, and I stood and hung my head before her, as though she had been a full-blown Sultana, and I the meanest of her subjects. She opened her eyes and said with languid impatience: 'Oh, what an awkward boy you are. Go on.'

Thus commanded, I made an effort, and plunged desperately into my last read narrative—the *Ancient Mariner*. I had just got so far as to state that the man who was going to the wedding was afraid to move because the old gentleman with the gray beard stared at him so, when she stopped me.

'I don't like that,' she said. 'Do you know about the three bears?'

I muttered a confession of my ignorance.

'Nor about Red Ridinghood?'

I did not quite know Red Ridinghood; but I knew Bluebeard and Jack the Giant-killer, and Aladdin and Jack and the Bean-stalk.

Whether the Sultana's mind would have continued in favour of story-telling, I cannot say, for the door opened just then, and a gentleman entered the room. He nodded at my companion, and said: 'Well, Polly.' She nodded back at him and laughed. The gentleman regarded me with an air of good-humoured amusement for a minute or two, and I felt sure of him at once. He was many years younger than my aunt, but was strikingly like her. He was very handsome too, and had a soft engaging manner. I liked his kindly gray eyes and his candid face, at once. He sat down and took me on his knee. 'Well, my little man,' he said, 'how do you like your new home?'

I said I didn't know.

He set me down again, and laid a hand on each of my shoulders, and so held me at arm's-length, and laughed. 'I must get to know this gentleman's tailor,' he said. 'I wonder whether this is his normal aspect, or whether Aunt Bertha has trussed him up in this way? What a funny little figure! We must mend all this, or we shall have the villagers burning him for a Guy on the Fifth. Frontal development, good; general expression, dreamy. Education, up to this time, I should say calculated to spoil him. Wonder if the governor's seen him?' All this he said less to himself than as if addressing some invisible fourth person. He sat and looked at me for a moment longer, and then asked me: 'Do you know what a frontal development is?'

'No sir,' I answered.

'Do you know what a Guy is?'

'No sir,' I responded again.

'That's all right then. Do you know what a shilling is?'

'Yes sir.'

'What would you do with it, if I gave you one?'

I told him I should give it to Sally to keep for me.

'Sally?' he said with a laugh. 'That's the bony importation I saw just now, I suppose. There you are. Now, you needn't give it to Sally; you can spend it, or do what you like with it.'

At that moment my aunt entered the room again. 'What, Will?' she said. 'You are beginning to spoil the child already?'

'I say, aunt,' he said, rising, 'what a spectacle the infant is! Who chose that dress?'

'It's not a very successful choice,' my aunt responded. 'But it will do for one of the village children. I ought to have seen to that myself, but was too busy.'

'What does the governor say about it? About your bringing the child here, I mean?'

'He says very little,' responded my aunt. 'In fact I think he says nothing at all.'

'He has seen him, I suppose?'

'Yes; he has seen him.'

'That's all right then. It was a clear duty; but his ways are so methodical and settled, and anything new about the house disturbs him so, that I was rather afraid he might be annoyed.'

With that they both went away, and Cousin Mary and I were once more left alone together. At her bidding, I kept shop until tea-time, and she came in at intervals and bought my whole stock, on credit. The tea-board was presided over

by the pink-cheeked damsel in the cotton print; and after tea, Mary and I played at keeping shop again until Aunt Bertha came, with Sally in her wake, and saw me tubbed and night-gowned, and heard me offer up my quaint evening petition. Then she took me in her arms and carried me to a tiny bedroom, with a sloping roof, and with white curtains and a dormer window. There was a fire-grate in the room, and the wood that burned and crackled in it made a cheerful flicker on the walls and roof and on the white curtains and the bed. My aunt kissed me and laid me down, and arranged the clothes about me with a kind and gentle hand, and then sat down beside me, and sang softly some verses of a Christmas hymn about the good King Wenceslas. It was raining outside, and the trees were moaning; and as I lay there with the flicker of the firelight in my eyes and a sense of caressing softness in the bed, the pleasant voice, and the comfort of the room, and the noises of the wind and rain outside, and the moaning of the trees, and the charms of Cousin Mary, and the dread and terror of the stranger's face, and the weird story of the Ancient Mariner, seemed all to mingle wavingly together, as though their lights and shadows flickered with the flickering of the fire, until they rounded and were softened to a dream, and lost themselves in sleep.

#### THE CATTLE-RANCH IN COLORADO.

My first visit to a Colorado stock-ranch brought me into contact with a dozen booted, spurred, and bronzed men, who wore flannel shirts, wide hats, and no collar. They were riding over the country, shewing a rich Englishman the 'cows.' My host had one of the finest ranch-houses in Colorado, and the aforesaid flannel-shirted men had brought the gentleman down from Rabbit Ear Ranch to call. My first knowledge of their approach was a whir, a sweep of horsemen rapidly approaching—although the hoofs made no noise on the soft turf, and then a loud whoop at the door. To one but recently from the land of gates and door-bells, this salute was singular. The visitors did not dismount, but dropped their reins, leaned from the saddles, and talked to the host, who had at the whoop made for the porch, the while their wild-eyed ponies stood with heads thrust into the roofed gallery. The broken sentences that fell on my ear contained mysterious syllables—cow-horses, cow-boys, cow-punchers, mavericks, carry-yards, round-ups, cutting-out, range, trail, outfit. The visit lasted an hour or more, refreshments and cigars being freely indulged in; then, with abrupt good-day, the cavalcade rode pell-mell away, across the breadth of wild-flowers and brown grass that spread on every hand far as the eye could reach.

There was no fence about the house; its piazza faced the mountains seventy miles away; the prairie blossoms leaned against the boards, as though the dwelling were a big thistle grown up in their midst; the sod had not been disturbed; there were no trees, no rose-bushes, no garden—none of the litter and rubbish of a new house in the East. Neat and complete as a pasteboard

box, it stood alone in the vast prairies, thirty miles from any other dwelling. The big herds of the owner were nowhere to be seen. They, with the horses and mules, were out in care of the cow-boys on the range. Afar out on the prairie, the tinkling bell of the leader, with the weird songs and shouts of the herders, now here, now there, as they headed off some refractory animal with wide detour and whizzing folds of the lariat, was one of the most peculiarly Western and fascinating of the many strange experiences of the ranch.

In Colorado there is a class of highly educated men engaged in the cattle-trade. The men are sun-burned, and wear flannel shirts while on the ranch; but none need mistake them for common or ignorant persons. They are in very many cases gentlemen of culture and standing. In the circle of ranchmen whose acquaintance I formed during my stay, there were several of considerable wealth and of scholarly attainments who, travelling in the West for health, had become interested in the cattle business, and enchanted by the wild open-air life; and who had invested in stock, roughed it, and were enjoying the climate, the freedom and the excitement, as well as the money it brings. One gentleman—my host—had been in the royal navy of Great Britain; but he now likes the billowy prairies better than the deep blue sea. A neighbour was one of the best special geologists in America. Travelling in pursuit of his profession, he saw there was 'money in cattle,' and so left his æsthetic Boston home for a tent on the plains. Another scientist, whose name is known on two continents, has during the past year gone heavily into the business. Two Harvard graduates are on ranches adjoining. Two young Englishmen, educated in Germany, herd their own flocks, and live temporarily in a dug-out. At the ranch where I was entertained, I saw three youths, brown and bashful, come every evening home with the horses, and ride away in the early dawn, at break-neck pace, after the snorting herd. They looked like any farm-boys; yet in the evening, when work was over, and they sat on the steps with the family, their talk was wonderfully bright and interesting. Two of them had travelled in Europe. One was the son of an ex-Senator of California; another was the nephew of a general officer of the United States army; and the third was the son of a distinguished citizen of New York. They are as well-read boys as one can find anywhere. In delicate health, they left the city to 'rough it' in the prairies, and are stout and well now. Being busy from morning until night, riding all day over the blossoms and the fresh grass, and learning the cattle business from the beginning, these lads will no doubt in a few years own ranches and herds of their own.

The man wishing to engage in stock business in Colorado buys so many head from a Texas herd, from men just in on the trail—that is, who have just driven a herd up from Texas. So many year-

lings, either male or female or steers, and so many two years old and cows, are called 'stock-cattle;' three years old are 'separate stock-cattle;' over three years old are stock-'beeves.' The yearlings average nine dollars apiece; for two years old and cows thirteen dollars; for three-year old steers fifteen dollars; for beeves twenty dollars. The stock-man selects his range, builds his corral and shanties by contract, takes his cattle there, brands them, turns them loose, and pays his herders thirty to forty dollars per month, and his foreman seventy to one hundred dollars. Prices are higher farther north in the Indian country; but around where I was, that was the average.

The ranches are government land. Anybody can graze their herds thereon; but by common custom the man who has long had range in a certain place is not driven away by new-comers. A man can, if he chooses, pre-empt one hundred and sixty acres near a stream, build his house there, and allow his herds to range around for forty or fifty miles. The general pasture-land of this region is an immense triangle, bounded by the mountains, the North and South Platte, and the Arkansas. Very few cattle ever get over the mountains or across the rivers; therefore practically this range is inclosed by these natural boundaries. The customs concerning the range vary in different localities. On the Arkansas a man owns a certain number of miles of river-front; back of that he claims his range. The country on the South Platte is older, well settled, and every man's range is as well known as if it had a high wall about it.

In winter the cattle graze on land which from want of water is unavailable in summer. In winter the snow quenches their thirst, and under the snow the nutritious grass serves them as their daily food. They are never sheltered, or watched, or herded during the winter. Left to take care of themselves, they wander off, are driven by the storms far from home, and by spring scattered over the whole triangle inclosed by rivers and mountains. Every man's herds are mixed up together. Then comes the grand 'round-up.'

In Colorado, the time and places of the round-ups are established by law, or rather determined by county commissioners, who publish in the spring the names of places for the round-ups for every day during the six weeks, usually beginning in the middle of May. Every ranch or neighbourhood then fits out a squad of men to go and pick out their own cattle. Generally, a neighbourhood club together for the great spring frolic. There are busy times then after the long winter's rest and isolation. Though the mountains are still white with snow, a profusion of the daintiest wild blossoms carpets the prairie; and from the bleak plains which the frost has scarcely left, hardy floral pioneers peep forth from out the tender grass. Preparations are made for the grand ploy with systematic exactitude. Harness is overhauled, wagon-covers mended, provisions laid in, and at last, on a bright spring morning, the wagons and

outfit are seen starting from every ranch in the country towards a common meeting-place on the unfenced plain. For an outfit of one hundred and fifty men, thirty wagons is the average number; and at the round-up, at least seven hundred head of horses are seen.

Each squad elects a foreman or captain; and all the captains are under the control of the commander-in-chief, who, for the nonce, is a greater man than a major-general in the army. The men are picturesquely clad in warm flannel shirts and buckskin trousers, and present a gay appearance as they dash off in advance of the canvas-covered wagons, that contain the beds and food. Each outfit has its distinctive name. One is known as the Owl Creek Squad; another is the Wild Cat Outfit; a third, the Lone Tree Company. The places of round-up are usually about twenty miles from each other.

The men from the ranches on the edges of the grazing-land—that is, at the foot of the mountains or nearest the rivers—sweep around the boundary, and start the cattle toward the centre of the range, the main place of the round-up. It takes weeks to get them together. During that time, what with driving wild steers by day, and night-herding or keeping them from scattering at night, no man gets over four hours' sleep out of the twenty-four. After arriving at the place of rendezvous, the commander issues his orders: The Wild Cat men are to take the outer circle; the Owl Creek men the next circle of cattle; and so on until the herds are subdivided into patches on the plains, and thus more easily handled. The cattle are roughly sorted on the way to the place of the next day's round-up. The confusion is lessened each day; and in due time each neighbourhood gets its cattle. Then each man in the neighbourhood-squad separates his brand from his fellow's; so that by the time the home-range is reached, each ranchman has repossessed himself of his own brand, and the young calves which run by the sides of the branded mothers. After the home-range is reached, the first thing is to brand the new additions to the flock.

Sometimes a calf old enough to leave the mother is found mixed up with the herd. Its parents being necessarily unknown, it is an alien and a subject of dispute, and is known as 'a maverick,' a name which thus originated: Mr Maverick, a Texan, had a small herd on an island, where they remained scarcely thought of until the close of certain hostilities. When he went to look after them, they had increased to such an extent that the small island was crowded. Without taking the precaution to brand the little strangers, he had them conveyed to the mainland, where they broke away and scattered over the whole state. Every quadruped unbranded, or whose owner is uncertain, has in Texas since that time been called a maverick; and the name coming to Colorado with the Texan drovers, has taken root in the grazing plains of that state. The law directs that in the South Platte section all mavericks shall be turned in for the benefit of the school-fund.

In the season the ranchman lives in his wagon most of the time, and is going over his range constantly. A wagon, ten men, a foreman and cook, fifty saddle-horses, provisions for two weeks—and they start from home, and go from one end of the range to the other. As they go along they

collect the beef and unbranded calves, take them to some corral, and brand the calves; they then turn them out, select beeves for shipment, and keep an eye on the general condition of the herd. They move about ten miles a day. When cattle enough are selected for a trainload of twelve to twenty-five cars, containing from two hundred and eighty to four hundred head of beeves, they take them to the nearest railroad point, invoice them to the Union Stock-yards, in charge of a trustworthy man, who delivers them over to a commission merchant of the Yards, who sells them, and sends the money by draft on New York to the owner.

A few days after my arrival I witnessed what they call 'cutting-out.' A drove of two thousand cattle that had been selected as beeves from the herd, stood in a close bunch on the plain a couple of miles from the ranch-house. We drove over to see the fun, and standing well out of the way of the racing horses, swinging lassos, and scattering cattle, watched with interest. The fattest beeves were 'cut out' from the herd and driven into a separate bunch, which was guarded at a little distance by watchful horsemen. One by one the finest cattle were separated. Some thirty horsemen were riding in all directions, swinging the long horse-hair ropes from their saddle-horns, digging their spurs into their horses' flanks, heading off the steers that were making for us, turning them from the herd, and driving them toward the bunch across the plain as though there was not a moment to lose. One of our party (a lady), excited over the chase of a rebellious cow that bore down upon us, waved her handkerchief, and came near causing a stampede. In a moment after the white signal fluttered, every cow in the herd was facing her, heads up, horns high in the air. The foreman shouted to her to hide the handkerchief. He told us afterwards that an unusual sight, especially of anything white, sometimes caused a great herd to break away and run for miles. At such times they will sweep over every obstruction, trampling down men and horses alike. The way to turn a herd is not to lead them or dash up in front of them, but by wide circling detours, turn them gradually in a semicircle.

In handling cattle, one man is of little use. It takes four mounted men to herd seven hundred; and eight men to drive and night-herd a bunch of two to three thousand cattle at one time. Mr Isliff, a well-known ranchman who owns a herd of forty to fifty thousand cattle, has sixty men employed, and a proportionate number of wagons and horses.

The cattle-man has to be moving from the time the grass is strong enough to feed a horse the length of his tether, until the month of November. Then the stock not shipped is turned adrift, wagons put under the shed, harness hung up, men discharged—except two or three to take care of the horses and do odd jobs about the place; and the ranchman, brown as a berry, stout, hearty, and vigorous, goes into winter-quarters at home, or puts on his store-clothes, takes a run East, and meets old friends. The stockmen to whom I have talked say too many are crowding in. From a profit of from fifty to one hundred per cent. it has gradually dwindled to twenty and twenty-five per cent. The old-timers want plenty of room, and aver that when ranchmen are settled

nearer than thirty miles apart, it crowds too close for comfort. The dealers have in the past few years been improving the quality of their cattle by the introduction of thoroughbred Durhams among the Texas stock.

The assessment returns credit Colorado with five hundred and fifty thousand head; Wyoming, two hundred and thirty-five thousand; Utah, three hundred and fifty thousand; Washington, two hundred thousand; Montana, two hundred thousand; Oregon, one hundred and seventy-five thousand; California, six hundred and fifty thousand. When it is remembered that the assessment is never over fifty per cent. of actual amount, an idea may be gathered of the immense cattle-trade in the country west of the Mississippi. The great feeding-grounds of the world are transferred from Texas to the wide buffalo ranges of the plains, the sheltered mountain parks, and the fertile pastures of the Pacific slope. Those who see cattle only in the crowded stock-cars or in the slaughter-yards of cities or villages, can have no conception of the splendid time the cows have of it in Colorado. Running-water, unlimited range of juicy buffalo-grass, and in summer-time a new bed every night of velvety prairie blossoms—what more could the most fastidious bovine desire!

## MY WIFE'S INHERITANCE

IN THREE CHAPTERS.

### CHAPTER III. CONCLUDED.

MISS LECLERC'S History of the Will ran as follows:

'In order that you may comprehend all the circumstances of the case, I must go back nearly seven years, to the time when I first entered the family of Mr. Russel, as governess to his niece Ellen. I was then only seventeen years of age, and my pupil fourteen. The family consisted of Mr. Russel, Ellen, and a nephew Charles. This nephew was about a year younger than myself, and a fine handsome lad. There were whispers that young as he was, his habits were very irregular; and it may have been so. I had no means of judging. I only know that to my girlish mind he seemed all that a young man ought to be, and so when he began to take notice of me and make love to me, I lent a very willing ear. This went on with more and more warmth, until, for some reason or other, he was compelled to leave his uncle's roof; but even after this we managed to meet at frequent intervals, although of course all unknown to Mr. Russel or Ellen; indeed they neither of them had the slightest idea of there being anything between us. At length Charles left his uncle's office altogether, and decided to go to London. I well remember the last night before he went away. People said he was wild and wicked; but I only knew that I loved him, and he declared that he also loved me. He said that when he got a situation in London, he would send for me; in the meantime, he wished me to remain in Mr. Russel's service, and keep him informed of all that occurred. I faithfully promised; and when on the completion of Ellen's education, I was asked to remain as her companion, I gladly agreed, for Charles's sake. Well, time passed on, and nothing particular occurred. Mr. Russel retired from business, and

we removed to Cottam; then came his illness, and your introduction to the family. I was ever on the watch for any scrap of information that might be interesting to Charles, and I did not fail to tell him of the growing intimacy between you and Ellen, as well as Mr. Russel's partiality for you. These last items seemed to give him considerable annoyance, and he requested me to redouble my vigilance.

'One day I heard a servant tell you, that Mr. Russel wished to see you in his bedroom. You remember how these rooms were arranged; that opening out of the bedroom was a small dressing-room, which itself communicated with the servants' staircase, to afford facilities for lighting the fire, bringing water, &c. Now, as you went up the main stairs, I very quietly slipped into the dressing-room by the others, as I thought it possible that something might be said touching the interests of my dear Charles. I thus managed to overhear enough of the conversation to gather its import; especially did I take note of the directions for opening the secret place in the desk; and when I got to my own room I wrote them down, lest I should forget. Well, I immediately wrote off to Charles; and the news must have troubled him considerably, for in a very short time I had a letter saying that he would arrive at Kinton the next day, and appointing a time and place for me to meet him. I did so; and after making me repeat as well as I could all that I had heard, he boldly proposed that I should get possession of the will and bring it to him. He proposed (to facilitate matters) that as he was quite unknown in Cottam, he would go there and engage rooms at an obscure inn called the *Red Lion*, and I should find him there any evening. I confess this proposal startled me, partly because of its difficulty, and partly because it was my first step in crime. However, he overcame my scruples, and I promised to do what I could; at any rate I would visit him at the *Red Lion* at seven the next evening. Fortune favoured me. The next day, just at dusk—it was the latter end of February—Ellen asked me to sit by the bedside a few minutes until the night-nurse arrived; of course I agreed, secretly delighted, for Mr. Russel being asleep, I had little difficulty in securing the will. I remembered perfectly the directions: "Top middle drawer, and a penholder through the top right-hand corner, then look at the back." In fact, I had opened the secret panel more than once, to see if I had heard aright. Soon after, the nurse arriving, I was at liberty, and hastened to meet Charles. I found him alone in an upper room of the *Red Lion*, and the table strewn with papers.

"Have you got it?" he eagerly inquired, the instant the door closed behind me.

'My only reply was to hand it to him. Without a word he broke the seal, and having read the contents, said: "You were quite right. It is as you supposed. He has left the whole of his property to Ellen, except a few paltry legacies. Now, you shall see what I will do."

"Do. Why, I suppose you will burn it, and then you will come in for an equal share with Ellen. But mind, there is something left to me in that will, and it is only because we are to be married that I agree to its being destroyed."

"Fear not; you shall be made all right. But I think I can do better than what you suggest.

I was not five years in my uncle's office for nothing."

"He then searched amongst the papers until he found a blank sheet as near like the one the will was written on as possible. "You see," he continued, "the old fellow was so methodical in all his ways, that I was pretty sure he would make his will on a certain sort of paper and in a certain way. I provided myself accordingly; obtained similar paper, wax, &c. to that which he always used, and had a copy of his seal made—I had plenty of impressions by me—you know you can get anything in London. Now see me write."

"He then began to copy the will, word for word, and I was astonished at the similitude. Five years' practice under his uncle's eye and with his uncle's writing constantly before him, joined to a natural aptitude for imitation, enabled him to copy every stroke and turn exactly. "There," he said, when he had finished. "A fair exchange is no robbery. I have written everything as it was before, except that Ellen's name now occupies my place, while I have taken hers. Not a very great change, but one that will make considerable difference to us both, I reckon. Now for the most difficult part, and that is to copy the signatures of the witnesses. I have practised uncle's often enough; but of course I did not know theirs; however, I must try."

"He did try, and succeeded so well that I could see no difference.

"There now," said he; "just you compare these two, while I go and get a glass of brandy."

"He left the room; and I, placing the two side by side, could only distinguish the one from the other by the change of names.

"Well," he said as he re-entered—"will it do?"

"Excellently well," I replied. "I cannot tell which was written by you and which by your uncle."

"Well, then; now to fold them;" and from a heap of various sorts of envelopes, choosing two, he took up the original will, sealed and indorsed it as before, but putting a small, almost imperceptible mark in the corner. He then took the new will and did the same, but without the mark.

"Now," said he, "listen carefully to my instructions. When you get home, replace the original will in the desk. You will know which it is by this mark;" pointing to the corner. "It is extremely unlikely that Mr Russel has been out of bed and missed it during the two hours you have been absent, so that will be all right. This other envelope you must keep by you until he is actually dead, and then take the very first opportunity of changing them. The old will you may bring to me, and I will destroy it."

"But why not make the change at once? I could as easily put one in the desk as the other."

"No; no. We must not risk it. There is just a chance that uncle may get about again and take it into his head to open the will, and then where should we be? No; make the change when that is impossible, and we are all right."

"I see, I see," said I, half-sickening at the dreadful deception, and yet too far committed to draw back; "as I shall gain equally with yourself, I promise to do all you wish."

"When I arrived at home, all was quiet, so I presently went into the sick-room. "Nurse,"

I said, "supper is ready. If you would like to go down, I will sit here half an hour for you."

"She gladly accepted my offer; and as Mr Russel was dozing, with the curtains drawn and the lamp turned down, I silently and quickly replaced the old gentleman's will.

"Well, time went on. Mr Russel, as you know, got gradually worse, and towards the end was more than half his time unconscious. One day you gave it as your opinion that he could not possibly live till the next, and it was during that last night that I stealthily made the change. In the morning he was dead; and so far our plot had succeeded completely. The result I need say nothing about, as you are so well acquainted with it.

"But now I must tell you of a little scheme of my own. I loved Charles, and would have done anything for him, and had no compunction in helping him, as I thought doing so was a means to love, marriage, and fortune. Still, he had taught me to be almost as wily as himself, and to take every precaution; so I determined to have a hold upon him, in case he should endeavour to play me false. To this end, when I got possession of the original will, I went into my bedroom, and with a sharp penknife, cut carefully the end of the envelope, drew out the contents, which I carefully transferred to my pocket, and then replaced them with blank paper the same size and thickness, guining the edges of the envelope together again with pale gum. I daresay it was not very skilfully done, but it answered my purpose very well. Afterwards, when I gave it to Charles, he glanced at it, saw the seal was unbroken, and suspecting nothing, committed it to the flames. We both watched it until it was consumed, Charles exclaiming: "Now I am really master of the Willows."

"And I soon shall be the mistress," I added.

"Oh, that of course," he replied.

"I have told you how he kept his promise—villain that he is!"

Thus finished this remarkable confession—a confession which to me was as acceptable as unexpected. Of course there was now no mystery, and I am only surprised that something of the sort had not occurred to me before; but it must be remembered that I knew very little of Charles, and no one had even hinted—even if they knew—of any connection between him and Miss Leclerc. I read the confession all over again to Ellen, and we both rejoiced at the turn events had taken. Miss Leclerc came in for a certain amount of pity; yet we could not but remember that had it not been for her connivance and assistance, Charles would have been unable to carry out his nefarious scheme.

"Still," said Ellen, "I am not sorry that you promised to allow her to escape punishment. If we get our own again, we can well afford to let her go."

In the morning I called upon Mr Sparks, my legal friend, and somewhat triumphantly laid the matter before him. He was very pleased, and at once offered to assist me all he could. We both agreed that after my promise to Miss Leclerc, it would be better to try to settle the matter amicably with Charles too. We therefore decided to wait upon him and tell him that all was dis-

covered; and if he confessed and gave up the property, we would then arrange without publicity or exposure. If, however, he resisted, we determined at once to proceed to law. It was Ellen's wish that, for the sake of the relationship between them, we should be as lenient as possible in case he yielded.

Miss Leclerc duly kept her appointment, and brought the oft-mentioned will with her. The conditions were again insisted on, and again agreed to; in fact I gave her fifty pounds on the spot, and promised another fifty pounds when all was settled. She then gave me the will, and was about to go, when I said: 'There is just one difficulty. Suppose Charles determines to defend the case, he might say this confession was altogether a trumped-up tale, this will a forgery; and as he has possession, I am not sure but that with a good lawyer he would beat us.'

'Ah! I don't think he will attempt to stand when he knows that I have told you all. But in case he does, then—with sudden energy—'then, will I attend and give evidence against him, ay, even if I have to stand in the dock beside him. No; no. He must and shall disgorge his wealth. Yes; that shall be my revenge.'

Next morning Mr Sparks and myself went over to Cottam, and were ushered into the presence of Charles. He was not too well pleased to see us, and his manner towards us was brusque and abrupt.

'May I ask why I am favoured with a call so early in the morning?' he said with an attempt at hauteur, although I thought that in reality he was not quite at his ease.

'We have called on a very serious matter, Mr Charles Russel,' I said gravely.

'State it then please, as quickly as may be, or I cannot stay to hear you, as my time is precious.'

'Not more precious than your liberty, I presume?'

'My liberty! What do you mean? What has your presence here to do with my liberty?'

'Simply this. If you refuse to hear us, we shall have you arrested at once.'

'Arrested! Are you mad? On what charge?'

'On the charge of forging your uncle's signature and changing the wills.'

'I—I—don't understand you.' These were his words; but they were belied by his ashy-pale face and starting eyes.

'Oh, you don't understand. Perhaps you have forgotten. Then let me remind you of that night at the *Red Lion*, of the new will you made, and of the instructions you gave to Miss Leclerc—instructions which she so well carried out.'

'It is false! I know nothing of what you are talking about. You have evidently come here to insult me. If so, you have come to the wrong place, I can tell you; and the sooner you pack off to Kinton again, the better.' All this with an attempt at bravado, which, however, did not deceive either of us, as we saw in his face plenty of evidence of the real terror behind.

'Ah well, perhaps you do not remember these things. Then I have only one other bit of information for you, and that is—looking him straight in the face—'we have possession of the original will.'

'It's a lie—an infamous lie! for I myself saw it bur'— But here his courage failed him, and

he could hold out no longer; he saw the fatal admission he had made; and after that we had very little trouble with him. He whined for mercy, and prayed that he might not be sent to prison. As it was not our wish to proceed to extremes, we were as lenient with him as possible; and it was eventually arranged that the two hundred and fifty pounds paid to Ellen should be returned to him, and that he should emigrate to Australia. This he did; and I think that not the least bitter portion of his punishment was the knowledge that it all came about through the instrumentality of the girl he had first tempted, and then so cruelly deserted.

Miss Leclerc was paid another fifty pounds, and joined her friends in America. We were never troubled with either of them again.

All that the world knew of the matter was, that a new will had been discovered leaving the property to Ellen. All the legal formalities were complied with, and we took possession; happy that at length my Wife's Inheritance was Regained.

## A PERILOUS ADVENTURE IN TIERRA DEL FUEGO.

IN TWO PARTS.—PART II.

### THE LAST RESTING-PLACE OF AN UNKNOWN FAMILY.

No signs of the lost path could we discover, and we wandered on we knew not whither. In fact, as soon as we left the 'open' on the summit of the cliff and entered the, in many places, impenetrable bush, we met with the fate of all wanderers in the forest, and unconsciously walked round in a circle, finding ourselves at the end of an hour's ramble on the very spot whence we had started; and before long I struck my foot violently against some impediment that seemed to be firmly implanted in the earth, over which I stumbled and fell. I rose immediately, though I had hurt my foot badly, and assisted by Enrique, searched amongst the long coarse reedy grass, with which the spot was overgrown, for the object over which I had stumbled. This we soon discovered; and to our great surprise, found it to be a piece of stout board or plank about six inches in width, firmly implanted in the ground, from which—though it was now in a slanting position—it had originally risen to the height of fifteen or sixteen inches. It had the appearance of a piece of plank brought on shore from some vessel, though it was completely sodden with the damp from the long rank grass which had concealed it from our sight, and was black and rotten with age. Three or four feet apart from it, we discovered another piece of board, also firmly planted in the earth, but rising only to the height of five or six inches.

It was evident that the two pieces of board were the head and foot marks of a grave—the grave of a child, from its small size—for on tearing up the grass, we perceived that the space between the two boards was slightly raised in the form of a mound. The remains that lay interred beneath

this mound were assuredly those of a European ; for the wretched aborigines of Tierra del Fuego—perhaps the lowest beings upon earth in the scale of humanity—do not bury their dead, but cast the bodies into the sea, when they do not devour them, as, it has been positively asserted by some voyagers, they not unfrequently do. I was still examining these boards—on the larger of which I fancied that I could perceive a portion of some inscription—when Enrique, who had wandered on, shouted to me that he had discovered another, and yet another, similar grave. Our curiosity was now fully awakened ; and on further search we discovered two more graves ; making five in all, within a circle of not more than forty yards in diameter. Though these graves were all of different dimensions, one only appeared to be that of an adult ; and it was plainly apparent that the head-boards of each and all bore some inscription, though the letters—which appeared to have been burned as well as cut into the boards—were almost wholly obliterated, or had been rendered indecipherable by the decay of the boards themselves.

‘Who could they have been,’ we asked ourselves, ‘who lay thus buried in this lonely desolate spot at the extremity of the earth?’

Three hundred and thirty years had elapsed since 1519, when the Strait of Magellan and the adjacent shores were first discovered by the Dutch mariner who gave his name to the Strait : but only within the last fifty years, and during that period but rarely, had ships made the passage through the Strait or had mariners landed on the bleak shores. It is true that from the date of their discovery the Strait and shores had been visited, at intervals far apart, by the early mariners—Dampier, Byron, and others ; and by Cook when on his voyages of discovery ; but these navigators of former days had but touched on the coast—the very name of which was dreaded. None had penetrated to any distance inland, or knew anything of the shores, save that they were described as being the very abode of desolation ; or of the inhabitants, of whom they gave the most absurd description ; and even since the commencement of the present century, those mariners who had passed through the Strait had not tarried on their way, if they could possibly avoid so doing, and had felt relieved when the passage was safely made, and they had left the perilous coast behind them. Only those on board surveying vessels despatched by the governments of Great Britain or Chili—beginning in 1830 with Captain Fitzroy, in chief command of the *Adventure* and the *Beagle*—had lingered on the coast, and had mingled with the natives on shore ; and these vessels had left none of the crews they carried, behind them. Who or what then was this family—to judge from the appearance of the graves—that had lived and died on this desolate spot of earth ?

Beyond doubt, we thought, they must have been some unfortunate family that had been shipwrecked on the coast ; perhaps of the crew of the vessel, they alone having escaped death. Or more probably, some master-mariner who had his wife

and children on board his vessel, had been set on shore with his family, and had been deserted by his mutinous sailors. But if either of these suppositions were correct, the circumstances must have occurred at some long distant period ; for people cast or left on the shores at any period during the present century would surely have found some means of making their existence on the lonely island known to mariners passing through the Strait, or landing on the shores, before they had died, one after another, as appeared to have been the case with these, until the last unhappy survivor, who left no one to perform the last sad duty for him, disappeared from the scene.

Forgetting for the moment our ship and ship-mates, we searched the spot for some vestiges of a hut or dwelling-place of some description ; for the wretched natives of the island have no permanent dwellings, but content themselves with erecting a sort of tent, with branches of trees covered with bark, and raised but three or four feet from the ground—something resembling the gipsy tents often seen in an English lane or common—beneath which they shelter themselves in cold and stormy weather. For a considerable time our search was made to no purpose. At length, however, just beyond the natural clearing in which the graves had been made, we came to a spot which seemed to us to have once been the site of a hut or dwelling-place. At any other time it would not have attracted our attention, for the earth—as in other parts of the bush or forest—was overgrown with coarse rushes or grass and rank prickly shrubs ; but Enrique accidentally stumbled into a dry ditch concealed beneath the long grass ; and on examining the ditch, we discovered that it formed a circle some five or six yards in diameter, and that the ground within the circle was raised in the centre, while it sloped gradually towards the ditch, doubtless to allow the water from the rains to run off into the hollow, and thus keep the ground within the circle dry. We searched this spot of ground diligently, and found several other pieces of board or plank, so much decayed that we could crumble some of them to dust between our fingers.

At length Enrique picked up a crooked ten-inch nail, so much eaten away with rust, that when the rust was scraped off, it was scarcely thicker than a knitting-needle ; and shortly afterwards I picked up from the bottom of the ditch what had once been the claw-head of a hammer, in a like rust-eaten condition. The finding of these articles made us still more eager in our search ; and in the course of half an hour we found in the ditch and within the circle, several other rust-eaten nails, and various other articles so sodden and decayed that it was difficult even to surmise what many of them had been—but which went to prove beyond doubt that the site had once been inhabited by Europeans. Among other things, I found what appeared to have been the cover of a Family Bible, though the leather was so much decayed—in fact it was reduced to a mere mass of pulp—that I could not even have guessed what it had been, had there not been still adhering to it a clasp black with age and exposure, but which on being scraped with the blade of a penknife, proved to be brass. It had

resisted the action of the atmosphere, which had almost worn away the iron nails.

We were still prosecuting our search, when Enrique suddenly started up from a stooping posture. 'Hark!' he exclaimed. 'Listen! What was that?' The next moment the faint distant report of firearms was heard.

'It is our shipmates,' said I. 'They are out searching for us.'

Again the report was heard. We were loath to quit the spot; for we knew how difficult it was to find a given spot in the heart of the bush when once quitted, unless some measures were taken to guide the searchers to it.

'Go you, Enrique,' said I. 'Follow the sound of the muskets. I will remain here. Captain de Ferrande would be greatly vexed if he were not to visit this spot.'

Enrique left me alone, and I employed myself for some time in collecting such trifling articles as I could find. Then I lay down on a grassy mound to rest. I heard the reports of firearms from time to time, sometimes distant, sometimes drawing nearer, and then again farther off. At length they ceased altogether, and I knew that Enrique had found the searching party.

Enrique had left his match-box with me, and it had been arranged that I should collect such dry leaves and grass as I could find and set them on fire, in order that the flames or smoke might guide the searchers to the spot. This I now did by kindling a bonfire on the highest spot near by. There was little flame; but the smoke soon rose in a vast black column, which towered high above the bush ere it dissipated itself in air. In the course of another hour I heard the report of firearms at no great distance, and soon afterwards Enrique appeared with the surgeon and two sailors.

'They sent parties out from the ship at day-break, in different directions,' said Enrique as he drew near. 'Captain de Ferrande is with this one. He will be here directly. Caraniba! you made a famous smoke. We saw it two miles off!'

He had hardly spoken ere we heard the approach of others through the bush, and presently a party of seamen, headed by the third officer, appeared. Captain de Ferrande followed a few yards to the right and a short distance in the rear. Suddenly he appeared to stumble, and then gathering himself up, uttered an exclamation, and stooping down picked up something from the ground. If he had purposed to scold us for the trouble we had caused him and the rest of our shipmates, he forgot his purpose in the discovery he had made. The article he had picked up was the thigh-bone of a human skeleton—evidently, from its size, that of an adult male. In a few moments we had all gathered round him. The bone which he had trodden upon was part of a skeleton which lay near the decayed trunk of what had once been one of the largest trees in the bush. The bones must have been separated before he approached the spot, but he had inadvertently scattered them further apart with his foot. The skeleton was that of a man above the average stature, and although the bones were much decayed, all of them were there.

One of the sailors picked up something and handed it to the Captain. It was a small chain, to which what appeared to be a locket was attached,

and which had been attached to the neck-bones of the skeleton. Chain and locket were both almost as black as ink, but they were not worn away; and on being scraped with the blade of a penknife they proved to be gold. The locket had to be forced open, not without much difficulty; but inside it contained two locks of hair plaited together, in perfect preservation, and as soft and glossy as if they had but lately been severed from the heads of the owners. One of the locks was of a dark auburn hue; the other flaxen, and from its texture and appearance, it had been severed from the head of a young child. Placing the chain and locket in the pocket of his jacket, the Captain joined the rest of the party in the search for such articles as might throw some light upon the condition of those who had, at some far distant date, evidently lived and died on this lonely spot. But nothing could be found save a few more articles similar to those that Enrique and I had picked up in the first instance.

I then spoke of the grave-boards and the inscriptions that I believed they had once borne, and the entire party forthwith proceeded to the burial-ground. Captain de Ferrande was of the same opinion as Enrique and I with regard to the inscriptions on the head-boards; and it was determined to remove some of them from the ground and to examine them carefully in a better light. The board over which I had stumbled—evidently the head-board of an infant's grave—was the first that was removed. As Enrique and I had imagined, it bore an inscription that had apparently been originally cut with a knife or chisel, and then burnt into the wood. It had evidently been of considerable length; but was now almost obliterated, the board being so much decayed that it would hardly bear handling. We perceived, however, that the inscription was in English; and after a little study of the characters, we were enabled to decipher the name of 'Annie.' This was the only complete word that was decipherable; but we made out the following letters and figures and portions of words: '— th. mem... .f d... l. ttl. Annie, .g.. tw. .... — M. re. — An.. D. .... 1. 93.' There had originally been a great deal more than the above; but where I have placed the long dashes, the letters were utterly indecipherable. As it stood, we made out the inscription so far to have been: 'To the Memory of dear little Annie, aged two years — March —, Anno Domini 1-93.' This left us in doubt as to the century in which the interments had taken place. But this doubt was solved by the inscriptions on the board at the head of the longest grave and on the head-boards of two others. The inscription on the first mentioned of these boards had apparently once covered the entire surface; but very few of the letters were now decipherable. All that we could make out were the following portions of words, and date: '— — B. lo... d W. f., .g. d 4. — 16. 4.' As we supposed—'To the Memory of my Beloved Wife, aged 4— —1694.' We did not remove any more of the boards, the inscriptions on the others being almost wholly obliterated, though we made out on one the complete date, 1691, and on another the name of 'Willie.'

After we had taken notes of the decipherable letters, names, and dates, we replaced the boards

firmly above the graves from which we had removed them; and then, before we quitted the spot, carefully collected the bones of the skeleton, and buried them alongside the grave of the long-deceased wife.

Thus, after the lapse of one hundred and fifty-eight years—for it was now apparent that the previous interments had taken place between the years 1691 and 1694—the remains of the unhappy man were laid to rest beside those of his wife. Beyond a doubt he was the last survivor of the family, who having no one to perform for him the last sad duty of humanity, had laid himself down to die, alone and uncared for, beneath the tree, which while his bones were rotting in the air, had itself decayed.

Captain de Ferrande had at first decided to retain possession of the gold locket and chain, which contained the cherished locks of the unhappy man's wife, and of one—probably of the youngest, of his children—little Annie. But after some consideration, he placed the locket and its contents in the grave, along with the bones of the husband and father who had treasured them to the last. Some of the other worthless articles were carried on board the ship as mementoes—but were soon forgotten and lost—and we quitted the spot, never again to visit it.

How this unfortunate family came to live and die in the island of Tierra del Fuego, at a period so distant as 1691-4, when few vessels had visited the dreary spot, may never be known. But it is mournful to picture their unhappy fate; to fancy them dying one after another—the children first—dying probably through the lack of the necessities of life, with no one to afford them relief during their illness, until at length the wife succumbed, leaving her unhappy husband alone—for how long, none can tell! Perhaps but for a short space of time, perhaps for long weary years! It is sad to think of the poor man lying down to die alone at last; but it is probable that he found in death a happy release from his sufferings. We endeavoured to learn from the miserable natives of the island, something of this unfortunate family. We thought it probable that they might have some record or tradition of a family of white people who long ago had lived and died on the island. It was, however, with very considerable difficulty that we were able to make them understand what we meant; and when at length they appeared to comprehend, they seemed to be afraid or to entertain a dislike to speak of the matter. They would shake their heads, point to the sea, the earth, the sky, and then again shaking their heads, would become obstinately silent. On one occasion, Captain de Ferrande tried to induce one who appeared to be a chief, or at least to exercise some little authority over the rest of the people of the island, to guide and accompany him through the bush to the spot where the remains of the family of white people lay interred. But the fellow shook his head and ran away, shouting as if seized with sudden terror; and as I have said, none of us ever again visited the spot.

Had this unfortunate family been cast or left on shore in Patagonia, on the opposite shore of the Strait, their fate would in all probability have been less miserable. They would have mingled with and found help from the natives; and most

likely, would have found some means of getting away from the desolate region; for the Patagonians, though but scantily civilised, are not savage, and are in all respects an infinitely superior race to their wretched Tierra del Fuego neighbours.

## THE ASSOCIATION OF GERMAN GOVERNESSES IN ENGLAND.

SOME time ago, the German ambassador, Count Münster, formally opened a Home in London for German governesses. This Home (16 Wyndham Place, Bryanston Square, W.) is the result of the united labours of a number of ladies, called 'The Association of German Governesses in England,' assisted by lady patronesses, and is another gratifying example of patient adherence to a desired object.

The great increase of the study of the German language and literature has naturally led a considerable number of educated German ladies to come over to this country as teachers in schools and families. In the year 1877, one of these ladies, specially gifted with tact, energy, and what we in England would call 'pluck,' originated the idea of the German governesses and teachers throughout the country forming themselves into a *bund* or society for the circulation of various German and English educational and scientific journals amongst themselves, and at the same time to procure engagements without the assistance of agents. In a few months the number of members increased to seventy-five, and now it has reached upwards of four hundred.

Previous to the formation of this Association, situations were for the most part obtained through 'agents,' who charged a considerable percentage on the salary of a lady for whom they had obtained an appointment. This plan, which obviously entailed a certain degree of dependence on these intermediaries, is now entirely done away with by the working of the Association. By members reporting vacant places and patronesses recommending their friends, a means of interchange is thus kept up which is highly serviceable to all concerned. When a member—to become which a certificate from a clergyman and good testimonials are requisite—makes application to the Secretary for an appointment, a form is sent, containing a list of questions to be filled up by the applicant, giving an exhaustive summary of her qualifications. This schedule being drawn up by the Committee of the Association, is to a certain extent technical; and by this means a great deal is elicited about the acquirements, &c. of the governess, which the lady engaging would no doubt wish to know, but which she could not possibly be expected to remember at a personal interview. Ladies have thus much more chance of being suited than if they attempted to conduct matters for themselves.

In a short time after the formation of the Association, it became necessary to have an office, with a regular Secretary to conduct the business affairs, which had up till this time been managed by specially industrious members in situations. A place was therefore selected as near the abode of

the President as possible, which has now developed into an established Home, to which new members arriving from Germany can go at once on landing, and to which sick members and those out of employment can turn at all times. The affairs of the Association are conducted by a President, Secretary, and six of a Committee of governesses, each of whom has been from ten to sixteen years in England.

Since the opening of the office in April 1878, the work has proceeded most satisfactorily, and several hundreds of German governesses have obtained engagements. Members placed by the Association pay two per cent. of their first year's salary towards the fund for the sick, as compared with five to ten per cent. charged by agents. Each member also pays an annual subscription of seven shillings and sixpence towards the maintenance of the Home. The list of patronesses, which is a large one, is headed by the name of the late lamented Princess Alice, of whom the Committee say in their annual Report, 'her energetic efforts and lively interest in the Association have chiefly promoted its extension and success.' The whole undertaking has been conducted from its commencement with patience, energy, and business-like intelligence.

To assist in raising funds for the opening of the Home, the Duke of Westminster twice kindly opened the reception-rooms at Grosvenor House for concerts arranged by patronesses. The task these ladies have so successfully accomplished is increased when we remember the busy lives governesses in most cases live, and the fact that they were all foreigners; and the necessity for it is clearly proved by the fact that the Home, although only opened some months ago, is already full.

#### 'EXPECTANT ATTENTION.'

From an article on Mental Physiology which appeared in the *Edinburgh Review* we extract the following remarkable instance of animal intelligence. 'The well-known astronomer Dr Huggins, had a four-footed friend dwelling with him for many years as a regular member of his household, a mastiff of noble proportions who bore the great name of "Kepler." This dog possessed many rare gifts, which had secured for him the admiration and regard of a large number of scientific acquaintances, and amongst these was one which he was always ready to exercise for the entertainment of visitors. At the close of luncheon or dinner, Kepler used to march gravely and sedately into the room, and set himself down at his master's feet. Dr Huggins then propounded to him a series of arithmetical questions, which the dog invariably solved without a mistake. Square roots were extracted offhand with the utmost readiness and promptness. If asked what was the square root of nine, Kepler replied by three barks; or, if the question were the square root of sixteen, by four. Then various questions followed, in which much more complicated processes were involved—such, for instance, as "Add seven to eight, divide the sum by three, and multiply by two." To such a question as that Kepler gave more consideration, and sometimes hesitated in making up his mind as to where his barks ought finally to stop. Still, in the end, his

decision was always right. The reward for each correct answer was a piece of cake, which was held before him during the exercise; but until the solution was arrived at, Kepler never moved his eye from his master's face. The instant the last bark was given he transferred his attention to the cake.

'This notable case of canine sagacity, however, in no way militates against the remarks which have recently been made in reference to the ideomotor character of the quadrupedal mind. Dr Huggins was perfectly unconscious of suggesting the proper answer to the dog, but it is beyond all question that he did so. The wonderful fact is that Kepler had acquired the habit of reading in his master's eye or countenance some indication that was not known to Dr Huggins himself. The case was one of the class which is distinguished by physiologists as that of expectant attention. Dr Huggins was himself engaged in working out mentally the various stages of his arithmetical processes as he propounded the numbers to Kepler, and being, therefore, aware of what the answer should be, expected the dog to cease barking when that number was reached; and that expectation suggested to his own brain the unconscious signal which was caught by the quick eye of the dog. The instance is strictly analogous to the well-known case in which a button, suspended from a thread and held by a finger near to the rim of a glass, strikes the hour of the day as it swings, and then stops—that is, provided the person who holds the button, himself knows the hour. The explanation of this occurrence is that the hand which holds the button trembles in consequence of its constrained position, and in that way sets the button swinging; and as the attention of the experimenter is fixed upon the oscillation, in the expectation that a definite number of strokes upon the glass will occur, his own brain-convolutions take care that the movements of the finger shall be in accordance with that expectation.'

'The mathematical training of poor Kepler has unfortunately come to an untimely end. The interesting arithmetician died of an attack of typhus fever, to the great sorrow of his large circle of friends, and he now sleeps under the shadow of the telescopes at Tulse Hill. The memory of his high attainments and of the distinguished success with which he upheld the reputation of his name, however, remains. His most intimate friends also enjoy the consolation of an excellent portrait of his thoughtful face, lit up with the exact expression which it bore when he was engaged with his arithmetical problems.'

#### ROSES.

A CRIMSON rosebud into beauty breaking;  
A hand outstretched to pluck it ere it fall;  
An hour of triumph, and a sad forsaking;  
And then, a withered rose-leaf—that is all.

A maiden's heart that knoweth not love's darting;  
A voice that teacheth love beyond recall;  
An hour of joy—an hour of bitter parting;  
And then, a broken heart—and that is all.

## RECENT PROGRESS IN MANITOBA.

THE agricultural possibilities of Manitoba have recently attracted so much attention, that we propose to offer a few words on the subject. It will be known to most of our readers that Commissioners were despatched by government to America to report upon farming and agricultural exports; and that farmers' delegates from various parts of Great Britain were sent across to Canada to look about them and furnish full accounts as to its eligibility as a field for farming enterprise. These accounts are now before us, as are also some interesting observations made by Lord Elphinstone, in a lecture which he delivered after his recent visit to Western Canada.

Manitoba is one hundred and thirty-five miles long east and west, by one hundred and four miles in breadth, its area being fourteen thousand three hundred and forty square miles. But this is only a small fragment compared with the great North-west Territories, which have been estimated to comprehend an extent of two hundred million acres of available land, alone capable of supplying all the grain required for the United Kingdom.

Since Manitoba was organised as a state of the Canadian Dominion, it has entered on a career of progress and prosperity. A census taken in 1823 gave a population of six hundred; that of 1871, immediately after the transfer, was twelve thousand; now Winnipeg, the capital, alone boasts of a population of about ten thousand. Fort Garry, the nucleus round which the town of Winnipeg has gathered, was long, as it is still, one of the most important trading stations of the Hudson's Bay Company.

Winnipeg, the capital of the province, is situated at the junction of the Red and Assiniboine Rivers, and stands fifth in commercial importance amongst cities of the Canadian Dominion. It was incorporated as a city in 1873, is connected by rail with Chicago and Detroit, and will shortly possess railway communication with the United States by way of Duluth and the Lakes; while it will have

the benefit of the Canadian Pacific Railway, which will run through Manitoba, North-west Territory, and British Columbia, on to the Pacific. Three years before its incorporation as a city, Winnipeg consisted of a few rude houses with about two hundred inhabitants. Now it has a well-settled appearance, with several wide and well-kept streets. Many of the houses are of wood; but others, built of cream-coloured brick, give it an attractive appearance. It has several hotels, a club-house, and various other places of entertainment. The Post-office, governor's residence, Court-house, City Hall, and Custom-house are the chief public buildings of the place. The University of Manitoba is governed by a council of representatives of the Episcopal, Presbyterian, and Roman Catholic churches. The Red River abounds in fish, and occasionally excellent wild grapes are to be found on its banks—a good indication of the warmth of the climate, at least in summer. Garden flowers grow well, with hues as brilliant as any to be seen in Italy.

The climate of Manitoba is one of great extremes—very hot in summer, and very cold in winter; but Lord Elphinstone did not find any of the settlers who were willing to exchange their cold dry winter for the bleak, damp, and changeable climate of England. During the five months of snow the settler has abundant opportunity for cutting his trees and fencing; while he draws his heavy material on sledges. Ponies are left to shift for themselves, but cattle must be housed and fed on prairie hay, which can be cut in summer, and stacked for winter use, at about one dollar per ton. The intense frost of winter, penetrating about three feet into the ground, is invaluable for the purposes of agriculture, forming a store of congealed moisture, which melts when the sun gains power, and so nurtures the root-crops in the hot summer months. The soil is black and loamy, four to twelve feet deep, and of the richest description; and instances are known where the land has been sown in wheat for forty successive years, the latest crop being as good as the first.

Some idea of the wonderful productiveness of

the soil may be gained from the results of the Agricultural Show held in Winnipeg in 1876. The extraordinary dimensions and weight of the following vegetables are vouched for by a friend of Lord Elphinstone. Thus, he measured and weighed: Turnip (Swede), 36½ lbs.; turnip (white), 20 lbs.; mangold, twenty-five inches long, twenty-one inches circumference, 19½ lbs.; carrot, fourteen inches long, twelve and a half inches circumference; cabbage (drum-headed), 23½ lbs.; cabbage, early (without leaves), 16 lbs.; cauliflower (without leaves), 12½ lbs.; sugar beetroot, 8 lbs.; radish, thirteen inches long, eleven inches circumference, 5½ lbs.; three onions (white), 3 lbs.; six potatoes (early rose), 12 lbs.; six potatoes (white), 11 lbs.; pumpkin, twelve feet in circumference, 39½ lbs.

Potatoes seem to thrive amazingly. Thirteen 'eyes' were planted and yielded four bushels: next five bushels were planted, which yielded three hundred bushels. Grain is usually sown in May, as soon as the weather permits, and is above ground in a few days afterwards; and in August, within seventy to ninety days after sowing, the harvest is gathered in. Wheat has been known to produce as much as 40 bushels to the acre, of 66 to 68 lbs. weight per bushel; oats, 75 to 90 bushels; barley, 50 bushels. The cost of production is calculated at 1s. 8d. per bushel only. One of the farmers' delegates makes the statement that, on fairly good land, on an average, a yield of 24 bushels of wheat per acre may be calculated upon for twenty years, and without using any manure; though we would here remark that the use of manure to a certain extent, is now being recognised as an important factor in the continued productiveness of the soil.

At present the absence of railways or other easy modes of transit is a serious drawback to the Manitoba farmer. Hence a proposal for the export of grain to Europe by way of Hudson's Bay, has been under the consideration of the Dominion government; one apparent drawback, however, exists in the fact that this water-way would be blocked up with ice for about eight months of the year—a difficulty which will tax human ingenuity to overcome. Powers have been asked from the Dominion government for the construction of a railway from Winnipeg to Hudson's Bay, and also for a line of steamers thence to England; and the statement has been made on good authority—significant for the British agriculturist—that the best wheat will be landed in England at thirty shillings per quarter, when the railways are in full operation.

A word may now be said about the conditions of settlement in Manitoba. In certain parts of the territory a government grant of one hundred and sixty acres of surveyed land is given for the nominal fee of ten dollars, to any one who really proposes to settle. He must be above eighteen years of age, and must stay and cultivate the land for three years before the government will grant the patent or title-deeds for it. The farmer can at the same time have the pre-emption of another hundred and sixty acres of neighbouring ground, for which one dollar per acre is charged, payable in instalments, the first of which is due at the end of three years. These terms do not, however, hold good in the case of certain belts of land immediately adjoining

the Canadian Pacific Railway, which, when the line runs through the prairie-country, will be thus rendered more valuable.

According to the Dominion Lands Act, the lands are divided into quadrilateral townships, comprising thirty-six sections of one mile square in each, with necessary allowances for roads. Each section of 640 acres is again divided into quarter-sections of 160 acres, and all townships and lots are rectangular. No purchase of more than one section or 640 acres shall be made by one person, and payments must be in cash. The free grants consist of quarter-sections of 160 acres, as already mentioned. It may interest some intending settlers to know that timber-lands are disposed of so as to benefit the greatest number. Such of the sections as contain belts or tracts of timber are subdivided into wood-lots of not less than ten or not more than twenty acres in each lot; as much as will afford wood for each quarter-section prairie-farm, in each township. Coal-lands cannot be taken as homesteads; but no reservations are made regarding gold, silver, iron, copper, or other mines or minerals. We might mention that coal is to be had in abundance, extending over a belt of more than two hundred and fifty miles in breadth, and chiefly in the Saskatchewan district. Deposits of copper and iron also await, as they will no doubt reward, future enterprise.

In order to make a fair start on his hundred and sixty acres, a man should have at least one hundred pounds, sixty pounds of which would be spent on the purchase of stock and farm implements, leaving forty pounds available for the building of a house and stable. The men who succeed are those who go out in spring, select their land, and at once engage themselves as labourers. The wages of labourers vary from one and a quarter to two dollars per day; female servants get from five to six dollars per month, with board; while ploughmen get one and a quarter dollars per day. While thus labouring, the intending settler is earning wages and his board, and is perhaps able by the following spring to buy what is necessary for a small start on his own land. His first work is to build a hut or house, after which he will break up and sow a portion of his allotment. After securing their crops, intending settlers again engage themselves for the winter as labourers, returning to their allotment in spring; and so by degrees work themselves into the happy position of being master of their own land.

Here, however, as everywhere else, and in every other undertaking in life, thrift and labour are indispensable essentials to success. 'It is folly to think,' says Lord Elphinstone, 'that fortunes are to be made in Canada or elsewhere without labour. A man, in order to succeed, must be prepared for hard work and many inconveniences, especially in a young country. But if he goes determined to fight his battle and determined to win his battle, that man is perfectly certain to succeed, and to gain a position for himself and his family better, far better, than anything to which he can even hope to attain at home.' As a proof that there are such provident settlers, no less than three million acres of wheat-land were allotted during 1878 to men of this class. Some came from Ontario and the eastern provinces of Canada, while two thousand were from the United States.

As giving some idea of the nature of the houses built by settlers, Lord Elphinstone gives a pleasant picture of a homestead, called Mount Pleasant, on a height overlooking the Little Saskatchewan River. It was occupied by a Scotsman named Geikie, who had left Perthshire three years ago with two of his brothers, and was now proprietor of nearly a thousand acres of his own. Their house was built of logs from the neighbouring forest, and internally had only one good room, with kitchen and servants' room adjoining. In this room there was the usual accumulation of stores, consisting of soap, tea, tinned meat, pots of jam, whips, bridles, guns, carpenters' tools, &c.; with a stove in the centre, and underneath was a large cellar for keeping potatoes.

His lordship's remarks as to farming prospects are interesting. Alluding to the enormous grain-produce, he says that 'for many years to come the surplus produce will all be consumed on the spot by the new settlers; but by-and-by as the land becomes cultivated and the country is opened up by railways, affording greater facilities for exportation, there is no doubt that an enormous amount of grain and other produce will find its way to this country. This must affect, and seriously affect, our farming interests. . . There can be no doubt that there is a great future in store for that country; and it will be well to look to the future prospects of our own country, as it may be affected by Canada, fairly in the face. From all I saw, I am driven to the conclusion that the value of land at home cannot maintain its present high standard.'

In the light of all the foregoing details it is evident that the struggling British farmer, with a little capital, would place himself in a vastly superior position for getting on, by settling in Manitoba. There he could have, to begin with, a free grant of land of extraordinary fertility, with the pre-emption of another section of land, should he require it, at the price of an ordinary year's rental of moderate land in the home country. Or he could purchase, if he chose, improved land in an eligible locality, in the neighbourhood of Winnipeg, where all kinds of agricultural implements, &c. may be purchased; or on the proposed route of the Canadian Pacific Railway, at moderate rates. A large family, instead of being a burden, will be an assistance to the settler; the sons may help in home farm-work in the first place, and by-and-by may acquire homesteads of their own.

In land-purchase it is always best to deal directly with the government agent, avoiding secondary or interested parties, care being taken to examine the land before concluding the bargain, and to see that the title to it is indisputable. Shippers look confidently for a large immigration to America in the course of the present spring; and it has been calculated that upwards of forty thousand settlers will be added to the population of the North-west Territories during the present year.

Testing the foregoing inducements by the experience of those who have been settled for some time in Manitoba, we find them amply borne out. Farmers who have settled as recently as 1877 have no hesitation in inviting plucky, industrious young men with from £500 to £1000 to go there. They report that every kind of crop is doing well,

and that the most eligible land is rising in price. On sheltered farms, cattle may stand out of doors all the season, and on many farms take the place of horses for field-work. They are fed on prairie hay, which in summer is cut for the winter supply; and occasionally a little crushed corn. All settlers agree that they have many discomforts and inconveniences, with hard work in seed, hay, and harvest time; and in summer black flies and mosquitos, which for a couple of months are a torment to new settlers. On the other hand, settlers have much to sweeten their lot: they may farm as they will, sell what they choose, and when they choose, and indulge in field-sports to their hearts' content.

Intending emigrants can receive accurate information as to fares and routes from almost any American shipping agent. We give several addresses to which applications may be sent: Silver & Co., 67 Cornhill, London; Finn, Main, & Montgomery, 24 James Street, Liverpool; J. P. Oliver, 16 Thistle Street, Edinburgh. Full information as to assisted emigration to Canada for agriculturists, tenant farmers, and all who intend to follow the occupation of farming, may be had from the Dominion of Canada Emigration Offices, 31 Queen Victoria Street, London, E.C. On application to A. V. H. Carpenter, general passenger and ticket agent, Milwaukee, Wisconsin, an illustrated pamphlet of Manitoba will be sent post-free.

Lord Dufferin, the late Governor-general of Canada, in speaking of Manitoba, termed it 'the keystone of that mighty arch of sister provinces which span the entire continent from the Atlantic to the Pacific.' The picture he drew of the country was equally just and happy, with its streams which 'flow for their entire length through alluvial plains of the richest description, where year after year wheat can be raised without manure, or any sensible diminution in its yield, and where the soil everywhere presents the appearance of a highly cultivated suburban kitchen-garden in England.' He closed, as we would do now, by hoping that Manitoba and the North-west Territories may eventually become happy and prosperous homes to millions of the human race.

## A LIFE'S ATONEMENT.

### CHAPTER V.—HISTORY.

*Your obedient servant, Aminadab Tasker.*

MR CRISP, managing clerk of the branch of the county bank at Hetherton, sat on a sweltering summer morning in the bank's retiring-room. Mr Crisp had nothing particular to do, and had exhausted that day's *Times*. The weather was oppressive; and notwithstanding that the window was opened and the blind down, and that Mr Crisp, for further ease, had discarded his coat and sat in his shirt sleeves, he perspired dreadfully. He mopped his damply gleaming baldness and his jolly face with a scented handkerchief of yellow silk, and fanned himself with the *Times* supplement, and yawned. Mr Crisp was a mighty angler, and he yearned just then for a quiet cast in his favourite stream, and could almost fancy himself standing knee-deep in grasses, with the

broad landscape dozing round about him, and the airs of the river blowing in his face. He awoke from this vision with a sense of added heat and aggravation, and went viciously for a blue-bottle with his ruler. The blue-bottle took refuge on the manager's gleaming baldness, and Mr Crisp rising in a sudden heat of temper—as the quietest of men will do under this sort of aggravation—whipped the blue-bottle from its refuge, and, taking a towel from a cupboard, pursued it with deadly intent to the window. Fiery hot, perspiring, and shirt-sleeved, he flogged the blue-bottle from coigne of vantage to coigne of vantage, and chased it from stronghold unto stronghold, until, as he held himself in readiness for a final blow, whilst the blue-bottle walked impudently across a pane in the very centre of the window, the door of the room opened, and Mr Frank Fairholt entered.

Mr Frank Fairholt was exasperatingly cool, and Mr Crisp was most aggravatingly hot and flushed and untidy, and felt himself taken at a disadvantage. He regarded Frank for a moment as though he would include him in a common anathema with the blue-bottle; but thought better of it, and returned his visitor's greeting cheerily enough.

'I have a little business, Crisp,' said Frank. 'Come across to the *Chesterwood*, and have some hock-and-soda, and cool yourself, and talk it over.'

'With pleasure,' responded Mr Crisp; but before starting, he went into the cupboard from which he had taken the towel, and after a pleasant splashing there, emerged rosy but cool. Struggling into his coat, he grew hot again; and his baldness, before he covered it with his hat, once more gleamed damply. They walked across the sunny street together and into the old-fashioned hotel.

'Jenny, my dear,' said Frank, nodding familiarly to the pretty barmaid, 'let me have a bottle of hock and two bottles of soda, and a ton of ice, and some good cigars. Send them up to the coffee-room at once. There's nobody there, I suppose? Mr Crisp and I want to talk business.'

'There's no one there, Mr Frank,' responded the pretty barmaid; and Mr Crisp and Frank went up together.

'Did it ever strike you, Crisp?'—said Frank.

He got no further, for Mr Crisp, arising with a look of settled determination upon his face, took a napkin from the buffet, unfolded it, and approached the window with a stealthy step. 'You know how you caught me, Mr Fairholt,' said the managing clerk, with a dark and tragic look. 'I was after a fellow then; but I'll finish him this time.' A blue-bottle buzzed harmlessly on the pane, and Mr Crisp, with one dexterous flick of his napkin slew him, and bore his body triumphantly to the table, where he inurned it with cigar-ashes.

'I beg your pardon,' said Mr Crisp. 'You were saying—Had I ever noticed?'

'I was saying,' returned Frank, 'that here comes the prettiest girl in this division of the county, bearing in her fair hands the best of liquors for a day like this.—Your health, Jenny.—Yours, Crisp. Pretty tippie! Try a weed.' Frank strolled to the mirror, and admired himself, with a tall tumbler in one hand and a cigar in the other. He laid down his tumbler in order to

smooth his moustache and to arrange his hat and his curls, and swaggered calmly round on Crisp.

'What's the business, Mr Fairholt?' asked the managing clerk lazily, from a cloud of smoke.

'Oh, it's not much,' Frank returned. 'I've been going rather too rapidly up in town, and I don't care about falling on the governor; and so my brother Will has just done this for me.' He produced a purse, and took therefrom a piece of stamped paper, and threw it across the table to Mr Crisp.

'M-m-m,' said Mr Crisp, taking it up and looking at it. 'Two hundred? And four months? I wouldn't do this kind of thing too often, Mr Fairholt. Do you want me to cash it?'

'Yes,' said Frank carelessly, 'if you will be so good.'

'Well, of course I'll do it,' Mr Crisp responded with expostulatory voice and manner. 'But I wouldn't try this game too often, if I were you. It's a bad game. Of course Mr Will's name is good enough for two hundred here, and it shan't pass out of our hands.—Cresus Brothers? Yes; they're our London agents.' Mr Crisp turned the blue paper over in his hands and continued: 'You can't work a dead horse, you know, and it's just like trying to do that, to work for money when you've spent it already. So I'd just advise you, Mr Fairholt, to do as little in this way as you possibly can.'

'I don't think I shall trouble you again, Crisp. In point of fact, I've been going the pace up there to such an extent that I was obliged to do it now. But,' added Frank jauntily, 'I'm going to settle down, and train for matrimony. By the way, I have to start by the 12.10. We'll finish our hock, and then go over to the bank together.'

Mr Crisp nodded acquiescence; and they talked about indifferent matters for a time, and then, the cigars and the wine being both finished, returned to the bank, where Mr Crisp handed over notes and gold to the amount of the bill, minus interest at three and a half per cent. per annum, and Frank shook hands and departed.

The train flashed through the peaceful western country, and Frank, as he looked lazily from the carriage, determined to take this, that, and the other scene for a picture some day. But in an hour or thereabouts he fell asleep, and did not awake until he found his ticket demanded. The train panted into Easton Station shortly afterwards, and the young artist took a hackney-coach and trundled to his rooms in Montague Gardens. Arrived there he found several letters awaiting him, and amongst them one which ran thus:

7 ACRE BUILDINGS, CITY.

SIR—When last I saw you, I gave you a week to look about yourself. That was a fortnight ago, and if things are not settled by Thursday next, I shall have to make a row.—Your obedient servant,

AMINADAB TASKER.

P.S.—I shall wait for you here not later than six o'clock on Thursday evening.

'Confound the fellow!' said Frank, pulling at his curls and surveying his own reflection in the mirror above the mantel-piece. 'And it's five o'clock already. I suppose I must go down and see him. It's a horrible nuisance, now that I have money in my pocket, that I must turn it out so

soon. One hundred and sixty to him, and I'm left with only fifty pounds in the wide wide world, and with this affair of Will's hanging over me. Well, it's got to be done, I suppose.' So Frank emerged from his chambers, hailed a passing coach, was driven to the city, and reached 7 Acre Buildings.

Acre Buildings lay off Cheapside. They were houses of that old and stately fashion with which the city once upon a time abounded, but which are growing rarer now. Notwithstanding their stateliness and age, there was something of an air of *bourgeoisie* about them; and they had something of the aspect of prosperous citizens, whose station being secured in life, had fallen a little from the noise and bustle of common business. Passing from crowded Cheapside into the court that led to Acre Buildings, you passed from noise to quiet and from heat to shade. The Buildings stood round a square flagged court, with a dial in the centre. The finger had rusted and fallen from the dial long ago, as though Time stood still in Acre Buildings, and needed no finger to mark his progress any more. The dial was defaced and broken, as if Time's reign were over, and the image of his rule destroyed. But nowhere did Time move onward with a quicker step or a more certain one than at No. 7, and with those whose needs might lead them to its presiding genius. There were a few trees in the court, and the aspect of the whole place was calm and countrified and pleasant.

In No. 7 Acre Buildings there was an office on the second floor. The black outer door bore in white letters the name 'A. Tasker'; an inscription on the glass panel of an inner door dumbly requested the passer-by to walk in. Obeying this voiceless injunction, Frank found himself confronted by a small boy, with a dry sandy complexion, and a head of dry sandy hair.

'Is Mr Tasker at home?'

'Yes,' responded the boy aggressively; 'he is.'

'Tell him I wish to see him.'

'You can't see him; leastways not yet,' returned the boy, contemplating a fly-spotted almanac on the wall. 'He's engaged. You'll have to wait.'

'Give him that, and tell him that I won't wait.'

The small boy, with some hesitation, took Frank's card, and passed with it into an inner room, and returning after a minute's absence, said: 'Please to come this way, sir.'

Frank followed, and found Mr Tasker alone. He was a short and thick-set man was Mr Tasker, with gaudy thick-set rings on red and thick-set fingers. He wore a burly watch-chain crossed and re-crossed several times above a burly waistcoat. As Frank entered, a whiff of macassar and musk, proceeding from the sleek head and flourishing bandana of Mr Tasker, assaulted his nostrils—a mingled odour like that which greets the loungeur in the Strand as he passes Rimmel's on a languid day. Mr Tasker's eyes were bright and beady. Mr Tasker's nose was magnificently Hebraic. His lips and teeth were eminently carnivorous. His face was clean shaven except for a black imperial on the chin. His manner was one of uneasy self-confidence.

'I was told you were engaged,' said Frank.

'A mistake, sir,' Mr Tasker answered through that magnificent Hebraic nose. 'Will you take

a chair? You have called about that little matter?'

'I have called,' said Frank, in his most contemptuous manner, 'to take myself out of your Hebrew clutches, Mr Tasker, and to tell you how much you deserve a caning for this piece of insolence.' He threw Mr Tasker's note carelessly on the table, and produced his pocket-book.

'No sir,' said Mr Tasker, insinuating remonstrance through the Hebraic nose; 'not insolence, my dear sir—not insolence. A little friendly reminder.'

'Do me the favour not to be friendly, if you please,' Frank answered. 'Produce your bond. Here is your pound of flesh.'

Mr Tasker smiled—a little tiger-like. 'Gentlemen say what they like to me, sir.'

'So I should suppose,' Frank returned. 'Is this the promissory-note?'

'I hope, Mr Fairholt,' said Mr Tasker, creasing out the tigerish smile from his lips with his thick-set jewelled fingers—'I hope you are not displeased with my way of doing business. I do all I can to oblige you, sir—everything. Mr Tasker gathers up the bank-notes, and continues: 'This was only our second transaction, sir; and now that I see how punctual you are'—

'Don't trouble yourself, Tasker. Do me the favour not to know me when you see me; and good-day.' With that Frank swaggered from the room; and as Mr Tasker took the thick-set hand from his own lips the tiger-like smile came back again.

'Go your way, young gentleman; but if I lay my hand upon you again, I will pay you.—Do not be friendly, Tasker? Do me the favour not to know me? Here is your pound of flesh? Your pound of flesh?' snarled Mr Tasker, becoming more German as he gave his wrath free vent. 'I will haf my pound of flesh when I get my jance.' And what with the tigerish smile, and the thick-set lips, and the carnivorous teeth, and the beady eyes, Mr Tasker really looked as though he employed no hyperbole, but meant that pound of flesh in downright gastronomic earnest. Having locked his cash-box and patted it comfortably on the top, and stroked it with all his thick-set jewelled fingers, Mr Tasker opened a door opposite to that by which Frank had entered, and said to some one in the inner room: 'This way, sir, if you please. The gentleman is gone.'

In answer to this summons appeared Benjamin Hartley, of Hartley Park and Hall. 'I didn't catch the name,' says Mr Hartley. 'Who was that, eh, Tasker?'

'A Mr Fairholt, sir—a Mr Francis Fairholt.'

'Eh? eh? eh? Come now, Tasker, I've never seen his name in them there books of yours.'

'Well, the fact is, sir,' Mr Tasker explained, 'I knew the gentleman was a neighbour of yours, and I thought it would be best to be quiet until the thing was paid.'

'Now, look here, Tasker!' says Mr Hartley, shaking a warning finger at him—'I know your little game too well. You ain't goin' to humbug me! This ain't the first time, Tasker, as I've found you tryin' that first an' loose dodge on. Do you know how much of my coin you've got in this little business?'

'I cannot tell you at a moment's notice, sir.'

'Then I can. Seven thousand five hundred

pound. I'll draw it, every farthin', and smash you, if you come them games with me. Fact. I've more than half a mind to do it now. This kind o' game's low, and I've got no business to be mixed up with it.'

'If you will not be too sudden, sir,' says Mr Tasker in nasal supplication. 'I have saved a little; I could carry it on in a small way on my own account—a very small way.'

'I don't know why,' says Mr Hartley, chewing a gloved forefinger—'I don't know why your people trust you. But I tell you, Tasker, I wouldn't trust you. No—not with a bad farthin'. Not as far as I could sling a bull by the tail.'

'My bonds,' said Mr Tasker, extending the jewelled hands.

'Your bonds!' returned Mr Hartley. 'Your bonds is straw.'

'I kept this secret,' said Mr Tasker, 'from the best of motives, sir.'

'Don't talk to me about your motives. I make a point of knowin' this business and all about it. I will know. It pays me in a hundred ways, as you can't guess of, and ain't goin' to be let to guess of. Now, you do this again, and I'll keep my word.' Mr Hartley rose to go, but paused at the door. 'Twelve to-morrow at my hotel. And just remember what I've told you. Do you hear? Remember! Our terms of business is these: Ten per cent. per annum, payable quarterly to me, and me to have full knowledge of the way all moneys is expended. You seem to have forgot that, Tasker. Just you remember it. Remember it!' With that he went away, and Mr Tasker was left alone.

'I will remember,' said that gentleman, darkly to himself—'I will remember. I can snap my fingers at you.' Mr Tasker's scowling face changed as his patron re-entered.

'I've got one thing as I want to mention, Tasker,' said Mr Hartley, closing the door behind him and advancing. 'You've been dealin' with Mr Francis Fairholt. How often?'

'Twice.'

'How much?'

'This time one-sixty with expenses. Less, last time.'

'Well, don't you have any more truck with him. If he wants money, he deals with me. That young gentleman belongs to a good old county family. He's the son of a neighbour and a friend o' mine. I believe,' says Mr Hartley, with a slightly oratorical manner, 'as his 'onse will shortly be alloyed with mine in matrimony. So you leave him alone.' Having given this injunction, Mr Hartley softened, and said: 'Good-day, Tasker;' and so went out and down the stairs.

Left alone, Mr Tasker darkly closed the cash-box with his hands, and darkly meditated. 'It is a good thing to hate some one,' says Mr Tasker, with the tigerish smile flashing out again. 'It ztirs the blood and makes a man lively.' With this pleasant reflection Mr Tasker opened a safe, consigned the cash-box to its depths, locked the safe, took his hat and cane and gloves, threw a 'nosy word of dismissal at the sandy-complexioned boy in the anteroom, made the outer door secure, passed up Cheapside, and through St Paul's Churchyard, Fleet Street, and the Strand, and turned into a club near Covent Garden. Here he made a dinner of the best the place afforded, and afterwards repaired to the smoke-room, where he

drank a good deal of brandy-and-water, and smoked a cigar over the money columns of the morning paper. He sat alone for nearly an hour, when he was joined by a languid and over-dressed young man of three or four and twenty. The new-comer was almost as plentifully jewelled as Tasker himself, but carried off his finery with a better grace. He wore a light flaxen moustache, and his long and light brown hair was parted in the centre, and fell upon his collar. His hands were singularly white and delicate. The expression of his face was very feminine and innocent. His clothes were cut in the extreme of fashion, and his small feet were cased in patent leathers.

'Ah,' said the new arrival, 'my Tasker!' He settled himself on a lounge beside the money-lender, and regarded him with a look of amused curiosity. 'My Tasker smoking of the best, and reclining as is his wont in gorgeous ease and jewelled opulence. What new spoil from the Philistines? What new booty from Egypt?'

Mr Tasker looked upon him with a frown, and inquired whether he couldn't leave 'shop' behind him.

'Most worthy of Israelites,' returned the other, 'master of Golconda's mine, priest of Ormuz' golden shrine, I have no shop. But you, Tasker—pardon the simile—resemble the patient snail, and carry your shop about with you. Or shall I withdraw that, and say that you carry your profession in your face, which is in itself a most potent letter of recommendation to all good fellows who can spend money and have no money to spend?'

Mr Tasker waved the subject off. 'Talk about that to-morrow, Mr Hastings, at Acre Buildings.'

'Most worthy Tasker, to-morrow is not now. I am impecunious.'

'I cannot do business now,' responded Mr Tasker.

'Really, Tasker,' said the other carelessly, 'you may perform works of necessity even upon the Sabbath. You may lift your ass from the pit, for instance. I invite you to lift him, and to let me have a fiver till the morning.'

'It is against my rule, Mr Hastings,' Tasker responds.

'Rules, my Tasker? We are Hebrew and Christian who change like water, not Mede and Persian, who alter not.'

'I gannot do it, and I will not,' said Mr Tasker.

'Now, my Tasker,' said the other with a languidly curious admiration of him, 'I know you to be in earnest. I recognise that Teuton tone, that voice of stern resolve. I shall have to be down on somebody else.'

The money-lender shifted in his chair, and took a great gulp at his brandy-and-water.

'Try one of my weeds, Tasker? I guarantee them good. A man in my position can't afford to owe for bad cigars.'

'You are going at a good rate, Mr Hastings,' said Tasker, taking a cigar. 'You will land somewhere in time.'

'Is Tasker among the prophets? I shall land somewhere in splendid company. Pay for a liquor, Tasker, and I'll tell you something.'

'Tell me something,' returned Mr Tasker, with his tigerish smile, 'that is worth a liquor, and then I may.'

'Don't bring things down to this base commercial level.—Do you know Fairholt?'

'Do I know Vairhold?' repeated Mr Tasker, turning suddenly round, whilst his black eyebrows were drawn almost over his beady eyes.

'Once more he is Teutonic. Has he sold you?'

'No,' said Mr Tasker, sliding back into his former position, and biting his nails, as he regarded the other through half-shut eyes. 'He has not sold me. But I will sell *him*, if he comes again into my hands.'

'Yes; we will sell him—to the Egyptians—for a mess of pottage. The allusions are mixed and inappropriate; but in a world of follies, what is one folly more?'

'He is an in-zo-lent dog!'

'I rather thought you had had a row, because when I met him in the Strand an hour ago he pitched into you to me. I mentioned your respected name, my Tasker, and instantly—to employ the words of the poet—black anger all his visage clouded. If you deny the validity of that quotation, I myself will don the poet's robe and ape a Bourbon in a crown of straws.—To return. Mr Fairholt brings certain accusations against you. He says you are a blood-sucking Shylock; that you are a cringing abject rascal; that you are a bullying ruffian. These are the heads of his indictment. Don't you think all this is worth a liquor?'

At none of this did Mr Tasker by word or sign express displeasure; but as he sat, looking with those half-shut eyes at his companion, his heavy hand found as much as it could do to smoothe the creases of that wicked smile about his mouth.

'Your admirer, Tasker, has invited me to his rooms to-night. We shall have a quiet little band at *vingt-et-un*. There are two or three fellows coming to join in—shall I say the mazy dance? That seems to round the sentence off. But I can't play *vingt-et-un* without coin, my Tasker. Have you ever known, you Cræsus, that want of pence which vexes public men? No. He has never known it. One touch of nature makes the whole world kin, and my Tasker is no kinsman of mine, in this regard. The wounded is the feeling heart. My Tasker, unwounded by the shafts of poverty, smiles on the sufferings of her victims. What saith that victim of the roseate god, young Romeo? "He jests at scars that never felt a wound!" Have pity, Tasker. Let me have a fiver, and I will revenge you on Fairholt. The croaking raven doth bellow for revenge. Let it be ten, and make the vengeance deeper.'

'Leave 'shop' until to-morrow morning, Mr Hastings.'

'Won't he,' said Hastings looking on him as though he were some curious and unknown creature brought there for scientific examination—'won't he buy vengeance at so cheap a rate? Here is a first-class practical revenge offered dirt-cheap, and not accepted.'

'Who tells you,' said Mr Tasker, speaking more through his nose than ever, 'that I want revenge?'

The other laughed mischievously, but returned no answer; and Mr Tasker rang the bell and called for more brandy-and-water. He drank it savagely, while the waiter stood there, and then asked for more.

'You'll be tipsy, Tasker,' said his companion.

'What is that to you?' returned that worthy with a nasal snarl. 'You have egged me; you have annoyed me; you have made me angry with his name. He is an insolent dog!'

'This does you credit, Tasker! Try Shylock at Drury. Kean is not worth his own carving-knife and scales, compared with you. Oh, answer to the Muse's call! It is the Muse, the jolly Muse!'

The money-lender, still regarding his companion darkly, raised his glass to his lips and imbibed its contents. He fell back slowly as he drank, and threw back his head; but he maintained that fixed look until he regarded Hastings through the bottom of his glass. Hastings, lolling on the settee, looked across at him in return with a mild expression of interested curiosity. 'Come over and join your admirer, Tasker. He will be glad to see you. 'Come.'

Mr Tasker produced a pocket-book, and took therefrom two crisp five-pound notes. He laid them down upon the table, and took from another compartment of the pocket-book a little strip of blue paper with a raised stamp at one end. Taking pen and ink from a stand on a table at the other side of the room, he returned, and seating himself near Hastings, filled up the form. 'Fifteen, at four months.'

'Hail, worthy Timon! That's at the rate of a hundred and fifty per centum per annum.'

'It will pay you if you win,' said Mr Tasker darkly and thickly. 'I hope you may.' With that he rose, and allowing the evil smile full play for once, put on his hat, and tapping his companion lightly on the shoulder, proceeded: 'Ztrip him, and send him back to me. If you will do so much, you are welcome to those.' And with this fine expression of feeling Mr Tasker went a little unsteadily from the club, hailed a passing coach, and was driven home.

Mr Hastings looked at his cigar as if he questioned it while he said: 'I can employ the words of my friend Mr Puff of *The Critic*. "Well—pretty well; but not quite perfect; so, ladies and gentlemen, if you please, we'll rehearse this piece again to-morrow."'

(To be continued.)

## INGENUITY MISAPPLIED.

WHO that views in detail the career of the successful swindler by whose involved proceedings extensive frauds are perpetrated, is not struck with the knowledge of human nature, and the ability for commercial enterprise often exhibited—an ability which, applied to some better purpose, might have raised the clever thief to a position of usefulness and importance! But apart from the efforts of the commercial swindler, with his forgeries, false entries, and years of deceit, what instances are there not on record of, on the one hand, the ingenious plans of him whose energies are directed against the property of his fellow, and on the other, of a marvellously foolish credulity, which frequently enables the most shallow contriver to create for himself a time of harvest.

If what is known of the operations of swindlers were more extensively published, no doubt the

effect would be to diminish in some degree the national stock of credulity; though, as we have had frequent occasion to remark, it would seem that for every swindler who exists, there are hundreds who are ever ready to be swindled. In the police reports there are cases almost daily of the most paltry tricks, against which people would need to be constantly on their guard. We throw together a few incidents of this kind, which, the reader will remark, are not without their comic side.

Some years ago one of Her Majesty's judges, taking his seat on the bench a little later than usual, in the course of an apology to the legal gentlemen in his immediate vicinity, remarked that he had not come direct from home, and having left his watch under his pillow, had not been aware of the exact time. This observation was not entirely lost on at least one person in court, for when his Lordship returned home, he found that an obliging gentleman had been kind enough to call for and obtain 'the judge's overcoat, and the watch left under his pillow!'

Some time ago a base fraud was perpetrated at Chester. On the occasion of the races, when every place was thronged, a man, apparently a barman, entered the smoke-room of one of the hotels, and flourishing what he termed a twenty-pound note, desired to be informed whether any of the company would be kind enough to change it, or to lend him master twelve pounds till he should obtain change. Twelve sovereigns were soon forthcoming; and the pseudo-tapster, saying he would have the note changed as soon as possible, made his exit, donned his overcoat and hat, which he had placed on the stairs, and disappeared.

Fortunately for jewellers, transactions of the kind now to be described have not often occurred. Some time ago, a fashionably dressed lady swindler carried on her operations on a gigantic scale, but was soon detected, as she deserved to be. Her mode of procedure was as follows: Arrived in a strange town, and in possession of the information necessary for her purposes, she repairs to the residence of say Dr Brown, to whom, with tears in her eyes, she tells a most pathetic tale of her husband's mental aberration, their needy circumstances, and her consequent inability to procure reliable medical advice; finally prevailing on the doctor to consent to see the lunatic, one of whose hallucinations, he is told, is that he has perpetual possession of a valuable parcel, for which he requires payment. She then proceeds to the establishment of the jeweller honoured by her choice, and selects a large quantity of jewellery, which she desires to be sent to the house of her uncle, the well-known Dr Brown, who will pay for it on delivery. This seems all right, and an assistant reaches the medical mansion at the appointed time. The shady niece is careful to be there too, and again interviews the doctor, whom she mournfully informs that her poor afflicted husband has arrived,

worse than ever about his parcel. To obtain possession of the valuables is the work of a moment on the part of the sham niece; and when this has been accomplished, the unsuspecting tradesman is ushered into the presence of the physician, as a lunatic! Naturally he refers to the articles which are to be exchanged for the doctor's gold, and the doctor has no idea of exaggerating his patient's mental condition by contradiction. Let the reader imagine the rest—the swindler speeding from the spot with her precious plunder—the embarrassed jeweller reiterating the object of his visit—the doctor informing him that it is all right, he will have a cheque directly—the victim growing uneasy perhaps, and endeavouring to force his way out—the doctor's henchmen rushing in and securing the madman—his shrieks and frantic struggles proving, to the satisfaction of his captors, that he is not only a madman, but a dangerous one—the binding of him hand and foot; and in earlier days, when the process of 'making a lunatic' was much less difficult than now, his forcible removal to an asylum!

The establishments of jewellers appear to enjoy an inconvenient share of popularity amongst swindlers. On one occasion, a well-appointed equipage drove up to one of these, and the occupant—a gentleman who carried his right arm in a sling—descended, entered the shop, and commenced negotiations. These were conducted to a successful issue; but at this period of the game, the purchaser discovered that he had forgotten his purse. Under the circumstances, of course the tradesman was kind enough to write at the dictation of the wounded customer: 'DEAR WIFE—Please give bearer my cash-box.—Yours, WILLIAM,' pleasantly remarking as he did so: 'Oh, we are namesakes.' The footman, who was ostentatiously pacing up and down before the door, was summoned, and drove off with the note; while his master departed to attend to other business till the carriage should return with the cash. It is scarcely necessary to add that the cash-box was readily obtained, when the jeweller's wife was presented with the note in her husband's handwriting: 'Please give bearer my cash-box.—Yours, WILLIAM.'

Hotel-keepers, it would appear, rival jewellers in the affections of the sharper. Here is a swindler's way of paying the reckoning of 'mine host.' Two gentlemanly looking men, apparently of substantial means, but who in reality depended for a livelihood on their fraudulent ingenuity, after having spent a week at a small country hotel, where they lived upon the best of everything, at last determined to make a move, and watching their opportunity, invited their unsuspecting host to assist in the consumption of a bottle of his own wine; an invitation which was readily accepted. After a suitable prologue, one of the guests expressed his willingness to bet the landlord fifty pounds that the latter could not stand before the clock in perfect silence for half an hour, moving his weight from one leg to the other and winking, at every tick of the pendulum. Delighted at the prospect of such a speedy addition to his capital, 'mine host' immediately closed with the offer, and enthusiastically commenced his undertaking; during the performance of which, it is scarcely necessary to add, the swindlers contrived to set

out in quest of a new field for their operations. The landlord was soon found at his novel task, and created no small surprise amongst the members of his household as he speechlessly alternated from leg to leg. In vain they spoke to him; in vain they told him that customers were awaiting the pleasure of an interview; he motioned to them to keep away; he struck at them, and as they persevered in their efforts to dislodge him, he grinned at them in powerless desperation, while silent anathemas flowed from his winking eyes. The news spread. The neighbours poured in. 'Poor man! Suddenly gone mad! What a pity for his poor children!' But the time was up—the self-imposed task was ended; and the inn-keeper ceased from his labours to find his wager a myth, his cash-box gone, and himself the laughing-stock of the village.

Perhaps it was the same sharpers who, when desirous of changing their abode, summoned the waiter, and craftily induced him to join in 'blind-man's-buff,' each being blindfolded in turn. The waiter's turn to be the blind man came, when, if he caught either of his two playmates, he was to receive a guinea and a bottle of champagne. He crept about. He searched the corners. They were crafty hiders; but he would find them. He groped under the table; he tried the chimney and every place which could afford concealment to a rat; and at length jerked the bandage from his eyes, found the room deserted, and rushed downstairs to discover that he had been duped and his employer swindled.

This reminds us of the story of two fellows whose money was almost entirely expended, and who determined that a wealthy hotel-keeper should be the means of replenishing their purses. Accordingly, one of them giving up what money he had to the other, entered the premises of the selected victim, while his confederate kept out of sight. The visitor inquired for the landlord, to whom he propounded the query: 'Can you give me a good dinner?' Of course the resources of the establishment were equal to such a demand, and in a few minutes the 'good dinner' was served and duly discussed. Then came the question of payment; but the guest had no money, and pointed out to his host that, had he possessed the 'needful,' he should have ordered what he had consumed, in the usual manner; that he had simply sought information concerning the ability of the house and the inclination of its owner to supply him with a good dinner, and was much obliged for the same. A policeman was called in; but his decision leaned towards the impecunious diner—it might be considered a debt, but the criminal law could do nothing. The guest departed. The landlord ground his teeth. Not long after this, number two arrived with the query: 'Can you give me a good dinner?' A smile of terrible meaning crossed the landlord's face. 'Yes, yes,' he replied; 'take a seat.' He hastened out, and returned with a bucket of water, which with his own hands he dashed over the applicant for the good dinner; who thereupon jumped to his feet and demanded an explanation of such extraordinary treatment. 'Ha! ha!' laughed the incensed Boniface, as he glared about for something wherewith to chastise the object of his wrath—'ha, ha! you fellows can't fool me twice in the same way.' The visitor appeared

astounded; the irate landlord appeared anxious to kick the visitor out. A violent scene occurred. The would-be guest was denominated a swindler and a robber. The officer of the law was again summoned. Each made charges against the other. The infuriated host called in his solicitor. The visitor declared that he was perfectly able and willing to pay for what he required; exhibited his money, threatened proceedings for assault and battery, and vowed he would bring his action for slander as well. The landlord's solicitor considered his client was getting cheaply out of the scrape by paying down fifty pounds as a *solatium* for the wounded feelings and the wet clothes of swindler number two!

A swell-mobsman once made a wager with a gentleman that the latter could not carry a ten-pound note from the hotel at which both were staying to a place indicated, along a specified route. The bet was accepted; and the gentleman, with a grim smile placing the note within the lining of his hat in the presence of the swindler, started to accomplish his object. He had nearly arrived at his destination, when passing a place encumbered with brick, timber, and other building materials, his attention was attracted by a little boy searching amongst the impedimenta and crying piteously. The gentleman approached, and desired to know the cause of his grief. The boy had lost a ten-pound note, which had been given him to get changed, and he was afraid his father would kill him. By this time a crowd, attracted by the roars of the unlucky lad, had assembled, and the builder's materials were being thoroughly overhauled. A confederate among the crowd now managed, while engaged in the search, to knock off the hat which contained the coveted note. Its owner naturally stooped to pick it up, and replaced it on his head. Instantly the confederate collared him. 'Give it up! Give it up!' he cried. 'Give up what?' demanded the gentleman, endeavouring to set himself free; while the crowd, leaving off the search, began to throng round the sharper's victim. 'Give the boy his money—his ten-pound note, you thief!' shouted the swindler. The gentleman angrily protested; but the swell-mobsman cut him short by exclaiming: 'He's got it, men! I saw him put it in the lining of his hat.' The hat was instantly examined, and conclusive proof obtained, for why should any one be found carrying his money in his hat? And despite the struggles of the real owner, the note was handed over to the boy-confederate, who immediately made off with it; while, had it not been for the arrival of a constable, the victim of the conspiracy would have fared badly at the hands of the infuriated crowd.

The kind of swindle which has for its preliminary stage an invitation to young men to inspect an apparently valuable pipe or article of jewellery, alleged to have been found by the vender, is very frequently practised in the streets of large towns, particularly the English metropolis, and no doubt proves very profitable, and realises many times the real value of the article. The questionable morality of such a purchase must, however, materially detract from our sympathy with the deluded.

What compunctions trouble the conscience of the swindler as he spreads the net for his unwary victims, may be gathered from the senti-

ments said to have been recorded in the note-book of one prominently before the public a few years ago: 'Some men have plenty of brains and no money; some men have plenty of money and no brains. Surely men with plenty of money and no brains were made for men with plenty of brains and no money.' Unfortunately for his personal comfort, however, the law was at variance with his philosophy; and he was found worthy of a prolonged term of imprisonment, which is being accorded to him at the present time.

Quite recently a paragraph went the round of the papers which, if true, revealed a fraud accompanied by no ordinary impudence. Mrs Gladstone, the wife of the ex-Premier, acknowledged by advertisement the receipt of a ten-pound note from an anonymous donor among the subscriptions to a charitable institution in which the lady takes an interest. Some days afterwards she received an epistle requesting the return of the note, as the writer, on reflection, considered he could not consistently give the donation, he not agreeing with Mr Gladstone's politics. The note, according to the paragraph, was forwarded to the address given; but it was subsequently discovered that the individual whose conscience was so very tender respecting political matters, had evinced no scruple in cancelling to his own profit the subscription of a more honest man.

Apropos of certain extensive forgeries of ten-pound notes in Dublin, by which so many respectable merchants were defrauded, the following ingenious mode of getting rid of a forged note may not be uninteresting: A few years ago, on the afternoon of a certain day, whilst a well-dressed man was looking into a jeweller's plate-glass window in College Green, Dublin, and leaning half on the glass, half on the stone pillar, he received from an evil-designed passer-by a tremendous push, which sent his shoulder through the glass, but without injuring him in the least. The proprietor, with some of his assistants, rushed out, seized the unfortunate man, pulled him into the shop, and insisted that he should pay the damage done, which was estimated at nine pounds odds. The man protested—said it was no fault of his—that he had been knocked through the window against his will, and pay he would not under any circumstances. A policeman was called in, who seemed a little doubtful as to whether he ought to take the offender in charge; but the proprietor would hear of no compromise between paying and being removed to prison. The policeman therefore informed the offender that he must accompany him to the police-office, where an inquiry would be made into the circumstances of the breakage. The man still protested strongly, and point-blank refused to pay. He said that he had occasion to leave by the mail-steamer to Holyhead for London in the evening, and vowed that if they attempted to keep him, it would cost them ten times the sum demanded; and characterised their action as inhuman and unjust. But the proprietor would take no denial; so seeing no other course open, the man agreed to pay the nine pounds odds under protest, but threatened a speedy vengeance for their insolence. He tendered a hundred-pound note, and received his change of ninety pounds some shillings, and took his departure, raging like a madman at the unfair treatment he had been subjected to. The hundred-

pound note was afterwards found to be a forged one; and the clever scoundrel had succeeded in getting over ninety pounds for it by an ingenious trick worthy of a better cause.

## A FEW HINTS ON DOMESTIC NURSING.

BY THE MOTHER OF A FAMILY.

THERE are many little useful hints in nursing the sick to be gained only by personal familiarity with illness; and as my boys have obstinately persisted in having almost every form of infantile infectious disorder, I shall jot down a few of the points which I found to be most useful to me during the long weary time we were kept in the nursery.

When my little boys Percy and Louis were suffering from scarlet fever, I had every article of furniture save Percy's little bed, Louis's cot, two chairs, and a boxful of toys—which were afterwards burnt—carefully removed, all curtains and carpets rigorously excluded; while I had two print dresses, which I wore alternately during the dreary time. I used to be so sorry for the little patients; for of course all visitors were strictly prohibited, and children naturally like a change both of people and places. It is always advisable, if it is possible to have a choice of rooms for illness, to choose a large airy apartment with a south aspect; for there is nothing like sunshine for keeping one cheerful, as well as acting most beneficially upon the health of the patient; besides it is invaluable as a disinfectant, worth bushels of chloride of lime. In cases of infectious disease, people cannot be too careful in communicating with the outer world. Many and long-continued were the efforts I made to prevent the spread of scarlet fever; and truly thankful I am that I never heard of any one catching it from us. I placed an old saucer nearly full of cold water, in which I poured a little carbolic acid, in each room, the hall table, stairhead window, in fact, on every available spot in the house. At first the strong gaseous odour was highly offensive; but that soon wore off, and in a very short time its presence was almost unnoticed.

My boys used to hate the sight of their 'bokkles,' as they called their medicine; so I placed a little round table, which I covered with a clean napkin, outside the room door; and thereon I put the bottles, spoons, liniments, &c. which were needed; and found it such an improvement on the old plan of keeping them promiscuously on the chimney-piece, that I have adhered to it ever since. Every utensil as soon as used should be carefully removed and well rinsed out—cups, spoons, glasses, all should be at once cleansed, and not suffered to lie about in disorder. It is rather more trouble; but surely the little extra labour will not be grudged when the comfort of the patient is increased.

In these enlightened days it is almost an insult to write about the value of fresh air, yet there are some people who carefully keep their rooms shut up; and what a fatal mistake it is thus to exclude one of God's best gifts to man! If the patient be kept warm and free from draughts, plenty of fresh air may be admitted without the slightest danger. In most modern houses the upper window-sash lets down, and may be kept open a few inches.

If there is the slightest draught, it may be prevented at a very trifling cost, by having a light wooden frame from six to eight inches in width made to fit the upper part of the window, and a single thickness of flannel tacked on each side of it. I find it a capital plan to fold a sheet in two, lay it across the bed, above the under sheet, with the upper edge just touching the pillows, and the ends tightly tucked in under the mattresses. It does not wrinkle or crumple up, as single sheets will do; while crumbs can be readily brushed off, and it can much more easily be changed than a large one. It is best to fold the upper end of the quilt under the blankets before turning down the top sheet, as it helps to keep them in place; and as there is nothing more fidgeting to a healthy person than to have the chin grazed by blankets, the annoyance must be doubly great to one lying on a bed of sickness.

The greatest care should be taken to keep the beds clean; so the linen ought to be changed twice, and the blankets once a week; those that have been removed hung in the open air for a few hours, then thoroughly dried in a warm room, and put away to replace those in use, which must be similarly treated. There is nothing easier to an experienced nurse, or more difficult to an inexperienced one, than to change the bed-linen when a patient is in bed. I once noticed a capital plan in an American paper, which I have followed in scores of cases, and never found to fail. I shall copy it here *in extenso*, for the benefit of those who may be placed where such a scrap of advice may be useful: 'In the first place, everything required must be at hand before beginning; then move the patient as far as possible to one side of the bed, and remove all but one pillow. Untuck the lower and cross sheets, and push them toward the middle of the bed. Have a sheet ready folded or rolled the long way, and lay it on the mattress, unfolding it enough to tuck it in at the side. Have the cross sheet prepared the same way; lay it over the under one, and tuck it in, keeping the unused portion of both still rolled. Move the patient over to the side thus prepared. The soiled sheets can then be drawn away, the clean ones completely unrolled, and tucked in on the other side. The coverings need not be removed while this is being done; they can be pulled out from the foot of the bedstead, and kept wrapped round the patient. To change the upper sheet, take off the counterpane, and lay the clean sheet over the blankets, securing the upper edge to the bed with a couple of pins. Standing at the foot, draw out the blankets and soiled linen; replace the former, and put on the counterpane; lastly, change the pillow-cases.'

I found it most refreshing to my little patients to sponge the entire body with vinegar and warm water, and was very careful not to let them catch cold while doing so, just sponging over a small portion at a time; while the bed and the patients were equally protected by a large blanket, which I carefully pinned round their shoulders. It is a great mistake to have large quantities of fruit, biscuits, &c. lying about a sick-room. A very few grapes, an orange peeled and divided, and two or three milk or water biscuits are quite enough to have displayed at one time. The same may be said of food. I have often been pained, when visiting some of my sick pensioners, to see their

friends, with well-meant but mistaken kindness, bring large basinfuls of horrible compounds, which they dignify with the name of gruel, or sago or tapioca, as the case may be. The mere sight of the food seemed to set them against it. Whereas if a little care had been bestowed upon its preparation, and a small cupful provided instead of the large quantity I name, they probably would have partaken of it with pleasure.

Another error, committed with the best of intentions, is to keep asking the patients what they would like, if they could take this thing or the other. The sickened, wearied expression I have often seen flit over the faces of people who are recovering from a lingering illness, when their officious relatives come teasing them as to their requirements! During the lingering illness of a dear relative, I verily believe we made her often eat, just by providing dainty morsels of food, displaying them temptingly arranged, and taking them to her bedside quite unexpectedly; when if she had been asked *could* she eat anything, I feel confident the answer would have inevitably been: 'No; thanks. I don't feel at all inclined to eat.'

A very simple and expeditious way of cooking a little bit of chicken or fish is to butter a paper thickly, place the food to be cooked within the paper, and place it on the gridiron over a clear fire. A very short time suffices to cook it thoroughly; and I have often found that to be eaten when all other modes of invalid cookery have been tried in vain.

I always find Percy and Louis take refuge in milk when they are ailing, and truly thankful am I that such is the case. Once when Percy had a very severe attack of bronchitis, I felt in despair, for all the tempting food I could contrive failed to make him eat; for several days—eleven if I be not mistaken—he lived almost entirely on milk; and when I mentioned to our medical attendant my fear that the child would die of starvation, he quite laughed at the idea, and said: 'As long as he can take the milk, the child will do very well.'

In conclusion, I would earnestly impress upon my readers the great importance of having every article in the shape of body or bed linen thoroughly well aired. The slightest trace of damp may undo the careful work of days or weeks, may even cause all our nursing and attention to prove in vain.

### A QUEER COURTSHIP.

MANY years ago there lived at the little village of Bakewell in Derbyshire a quiet labouring family of the name of Arnold. The old man and his wife had only one daughter, Annie, a bright-eyed, dark-haired girl of sixteen. She was good-looking, and though possessed of many feminine graces, she could almost do a masculine amount of work, and was therefore a great support to her father and mother. She could manage farm-work of most sorts, and when that was not to be had, she would find something to employ her in a neighbouring mine. Necessarily she came into contact with a good many of the rougher sex, and being a good-natured willing girl, had already made several conquests over their susceptible hearts, but had never yet seen the one she would have liked to marry.

In those days, superstition was at its height, and any difficulty that wanted solving was submitted to the power of spells for divination. Most of the ignorant implicitly believed in their efficacy, and practised them to a great extent. Annie was no exception, and young though she was, she had a strong desire to know her future fate. Perhaps it was chiefly the knowledge of the supposed means that incited her; but she certainly left no stone unturned in trying to discover her fate. Once she had even exhorted a priest who passed that way to solve the secret for her, but he warned her not to tempt the Virgin or pry into the unknown. Gipsies had told her fortune, but it was never fulfilled. All manners of charms and incantations had she tried, yet without success; but for all this she did not despair, and placed as much trust in every succeeding trial as she had done in the first.

On St Thomas's Eve, she took the prescribed but unpoetical large red onion, and stuck nine pins in it, according to the custom. This she did by making a little circle of eight of them, and placing the ninth in the middle, naming it 'true love.' This she put under her pillow, and repeated the all-powerful verse:

'Good St Thomas, do me right;  
Send me my true love to-night,  
In his clothes and his array,  
Which he weareth every day.'

That night in happy dreams she saw the young man who was to be her future husband; but the features were strange to her, though he wore labouring clothes. Ever after, she looked intently at every fresh face, to discover a likeness to her vision, but without success.

When New-year's Eve came round, she invited some of her young friends to come and join in merry homely pastimes. All sorts of curious games they played, and the pleasant joke passed freely round in a manner that would put to shame many of the sham, cold, and uncomfortable *receptions* of the present day. As a conclusion to the evening's entertainment, Annie brought out a large substantial dish, filled with what was called a cold posset, of her own making. It was made of milk, ale, eggs, currants, and spice; and lastly, but not least, her mother's wedding-ring was thrown in. Then each guest took a ladleful out, and in so doing attempted to catch the ring, for whoever did so was certain to be married before the next year was out. Whether Annie had prepared it with a charm or not, certain it is that she was the lucky one who fished up the ring; and loud were the congratulations on all sides, for she was much beloved by her companions.

These repeated predictions only increased her curiosity, and she lost no opportunity of further solving her destiny. On St Valentine's Day, therefore, she peeped through the keyhole before opening the outer door, in the hope of seeing two or more persons, in which case she would have a sweetheart very soon. But better still, she saw a

cock and hen, which denoted, according to Derbyshire belief, that she would be married before the year was out. Everything seemed to concur in promising her married felicity that year, and yet, inquisitive girl, she did not know who was her sweetheart! She was sure it was no one she had ever seen before, for the face in her dream was totally different from any she could remember.

Thus time went on, and she was no wiser than ever. Midsummer Eve had arrived, and she determined to carry out a bolder project than any she had before attempted, to confirm her former dream. It was one which very few girls dare do, and the last one that had performed it five years before was a wild runaway whom they did not care to emulate. But Annie was a brave girl, and dared to attempt it for her own satisfaction. Her parents were not averse to it, but let her have her own way, foreseeing no harm; they placed great trust in the girl, and so feared nothing.

The charm she intended to perform was this: to go to the churchyard at midnight, and when the clock struck twelve, to run a similar number of times round the church, repeating:

'I sow hempseed—hempseed I sow.  
He that loves me best,  
Come after me and mow.'

The figure of the young woman's lover is then supposed to appear and follow her.

As the time approached, she felt rather nervous; but being a girl of good spirit, she braced herself up for the occasion, and at half-past eleven o'clock bade 'good-night' to her father and mother with a cheerful heart. Although superstitious, she was not afraid, and had often gone at night to strange places where a man would have feared to venture near. But a churchyard at midnight is not a very congenial spot, though upon this night the moon shone brilliantly, and she could see the old church quite plainly in the distance. Though fancying she saw figures flitting here and there as the moon was temporarily obscured by the white fleecy clouds, she went on undaunted till she reached the little porch, and the gate creaked open at her touch. Though she was alone, and almost wishing she had not come, her curiosity and pride resolved her. She waited uneasily till the old bell clanked out its dismal sound—the ghostly signal of spirit revelry—and the wind rustled in the trees with an eerie sough. Round and round the old familiar graveyard she sped, peering into the dark shadows she was unable to penetrate, and trembling with excitement. Once she stopped and looked intently at the shadow of a tall shrub where she thought she saw some bodily form. Her imagination was so strong that she could make out the features she had seen in her dream; but the moon gleaming forth at that moment, dispelled the illusion. Vexed with her disappointment, she again sped on, construing every shadow into a spectre. She had been round eleven times, and was despairing of success, when

in the moonlight she saw, this time quite plainly, the figure of a young man whose face seemed to resemble that of her dream. He wore ordinary working clothes, and was watching her in intense excitement. It was no ghost, but a real live human being. She stopped, breathless, while the young man, seemingly desperate, walked towards her. She did not recoil but waited his approach. Nearer and nearer he came, and all his features appeared familiar to her. At last he touched her, and the fascinating spell was broken; both were then perfectly certain of the other's bodily existence. His was an honest, frank face, and she trusted him instinctively. He was delighted with her modest beauty; and a series of mutual explanations followed; and after a little difficulty he fathomed the secret of the blushing girl. Both considered it a decree of fate that they had thus met, and plighted their happy troth in the old churchyard, sealing it with the time-honoured kiss.

His appearance, however, at the church was due to an entirely different cause, which he explained to Annie as he joyfully led her to her home. His name was Richard Random, and he lived at the little village of Sheldon, four miles off; but curiously enough had never before seen Annie or she him, though he had been to Bakewell several times before. He had been suffering acutely from the philosophy-defying pain, toothache, for a long time, and had unsuccessfully tried many means to cure it. The last cure he had attempted was one peculiar to Derbyshire, the pain being supposed to be caused by a worm—an old belief mentioned by Shakspeare in *Much Ado about Nothing*. To extract it they have recourse to a curious method: a small quantity of dried and powdered herbs is placed in a cup, and a hot coal dropped on it; the sufferer then holds his or her open mouth over the cup, inhaling the smoke as long as it can be borne. Then the patient breathes hard into another cup full of water, when it is said the grub or worm can be seen in the water. This, however, Richard had tried without success, and was at a loss what to do next, when a new arrival from Durham told him of another charm which was practised in that county. This he was only too glad to try, to cure if possible the 'love-pain,' as they call toothache in these parts. The horrid charm was this: The patient must go to the churchyard at midnight and bite a tooth from an old skull, and the pain would leave him for ever. We have seen how he came to the churchyard, and how doubtless his 'love-pain' left him, and by a much more agreeable process. He had seen the girl running round the church long before he reached it, and had wondered what it could be. Then he remembered the old Derbyshire custom on Midsummer Eve, and determined to find out whether it was a spectre or not. The rest Annie knew, and how agreeably both had been surprised! and when they arrived at her home, matters were explained to the entire satisfaction of all.

It was such coincidences as these, and sometimes perhaps preconcerted plans, that sustained the old belief in these customs and superstitions. Many of the village girls were now ambitious to try this sovereign sweetheart charm, and for some years after, the churchyard at Bakewell presented a lively 'spectral' appearance on each Midsummer

Eve. Annie's curiosity was now satisfied; and three months after her strange *rencontre* she was married to Richard Random at the ancient church she had so successfully circled. Loud and long were the acclamations of joy that were raised in the village, and the old bell clanked with a merrier tone than it had ever done before. All rejoiced that Annie was happy, though many wreaths of flowers were hung on the doors of her unsuccessful lovers, according to Bakewell custom. It only remains to add that Annie became a dutiful wife, and took events as they came, without attempting to peer too far into the future; while Richard Random was never again troubled with the toothache or 'love-pain.'

## THE MONTH. SCIENCE AND ARTS.

THE old year closed with news of a scientific experiment which excited lively interest among chemists and mineralogists—namely, that real diamonds had actually been made by experiment in the laboratory. The old and oft-repeated prediction seemed at length accomplished by a clever chemist at Glasgow. But though real diamonds are said to have been scratched by the manufactured ones, and rubies and other precious stones have been engraved by them, the inventor meanwhile only claims that he has produced a crystalline form of carbon, irrespective of the question of whether this is the diamond.

As a set-off to this there was Dr Richardson's account of a diver who, equipped in a diving-dress, could go down into deep water and stay there an hour without any supply of air from above. This remarkable personage, Mr Fleuss, is described as an Englishman, of the merchant service, and who has discovered a way by which breathing can be carried on under water. Dr Richardson states that in the first dip at which he was present Mr Fleuss remained under water twenty minutes, and came out free from oppression, his pulse steady, his breathing free, and his complexion natural. A subsequent dip in twelve feet of water lasted an hour, during which Mr Fleuss moved about, picked up small objects, and reclined on the floor of the tank. When he came up his pulse was beating nearly double the natural rate; but his face was clear of any sign of asphyxia, and, as in the former case, the breathing was free.

Though it has been surmised that Mr Fleuss has condensed air concealed about his person, the precise means by which he keeps himself alive under water is a secret; but that endeavours will be made to turn it to account may be taken for granted. To be able to take long walks in a river or at the bottom of the sea, independent of air-pumping from above, opens a wide sphere of usefulness for divers. And if life can be maintained under water, so can it also in a noxious atmosphere, and Fleuss' apparatus may render good service in dangerous coal-mines and in burning houses.

Researches made by Messrs De Candolle and Pictet of Geneva on the degree of cold to which seeds of plants can be subjected without impairing their vitality, present very remarkable results. It is not the first time that such experiments have been tried; but the means now available for maintaining a low temperature for a long time, impart to present investigations a degree of certainty never before possible. Seeds of cabbage, mustard, cress, and wheat were separately inclosed in glass tubes, hermetically sealed, and were then exposed during six hours to a course of refrigeration, in which the temperature was reduced to fifty degrees below zero of centigrade. No precautions were taken to restore them gradually to the ordinary temperature. They were sown, and all except seven grains of wheat, which had been damaged, germinated in the same time as seeds which had not been refrigerated. Another experiment was made with thirteen different kinds of seeds. It lasted two hours, and during half that period the temperature was brought down to eighty degrees below zero. They all germinated except three sorts, which were proved to be bad, by the fact that non-chilled seeds of the same kind did not grow.

These results are deserving of attention. We shall have additional particulars by-and-by, for the experimentalists intend to continue their researches, to prolong the period of cold, and to try its effect on a larger number of germs, as well animal as vegetable.

Dr Hagen, Professor of Entomology in Harvard College, Massachusetts, has revived an old question—*The Destruction of Obnoxious Insects*. From observation and experiments carried on under his advice, he has come to the conclusion that the vine-pest (*Phylloxera*), the potato-beetle, the cotton-worm, the Colorado grasshopper, caterpillars, and greenhouse pests generally, may be destroyed by sprinkling them with diluted yeast. The fatal ingredient is the mould or fungus which grows on yeast and on the surface of brewers' mash. 'The liquid,' says Dr Hagen, 'should be applied either with a syringe or with a sprinkler; and the fact that infected insects poison others with which they come in contact, will be a great help. Of course it will be impossible to destroy all insects; but a certain limit to calamities could be attained. The quantity to be applied, and the manner of the application, can be known only by experiment.'

In an experiment tried on potato-beetles, all that were sprinkled with the diluted yeast died within twelve days, and the fungus was found in the vessels of their wings. It is known that the common house-fly is often killed by a fungus. Dr Hagen states that, in baking and brewing, this fungus acts as a ferment equally well with yeast. Once at a meeting of German naturalists, a cake was eaten and beer drunk both of which had been fermented by the house-fly fungus.

A map of Mars, on Mercator's projection, con-

structed by Professor Harkness, from observations made at the United States Naval Observatory, Washington, is published in the *Monthly Notices* of the Royal Astronomical Society. It shews ten dark spots, one Y-shaped, one having the form of a leather apron, one a bullet, the others generally resembling willow-leaves, ranged in parallel lines from east to west. The south polar ice shews an important segment in the upper border of the map, and is, as seen through the telescope, pure white; while the colour of the planet is a golden yellow, and that of the spots or markings is a light indigo blue. The spots are by some observers supposed to be land. So far as it goes, this map is a very interesting representation of Mars. Professor Harkness hopes to improve it greatly during the opposition of next autumn.

At a meeting last session of the Anthropological Institute, the President referred to an explanation that had been given of the way in which the huge and heavy stones standing as monoliths, or in groups as tombs and temples, had been lifted into place: a long-standing and puzzling question. Among the hill-tribes of India there are some who still erect big stones as memorials; and, as is reported, they recently carried a stone weighing twenty tons up a high hill in the course of a few hours. The ponderous block was inclosed in a wooden framework so arranged that a large number of men could lift all at once, and in this simple way was it borne to the hill-top, a height of four thousand feet. That such a practice still exists is fair ground for assuming that it prevailed in the primeval ages. And that enormous weights are transported by mere manual labour, is stated by Captain Basil Hall, who at a port in India saw a number of natives lift and carry a ship's anchor of the largest dimensions.

Mr Rivett-Carnac, who has explored many of the barrows and burial-mounds in India, finds confirmation of the views of those explorers who have pointed out the extraordinary resemblance of the Indian barrows and their contents to those of Europe. Some years ago, a barrow in Northumberland was examined, and was found to be in nearly every respect a counterpart of the sepulchral mounds of the Deccan of India. Similar evidence has been found in France and other parts of the continent. In the East, as in the West, the shape of the tumuli is the same, and they are always placed on the slope of a hill facing the south. Brahmans, Buddhists, and Druids, as has been inferred, had a common belief.

A new map of Turkestan in four sheets, drawn and zincographed at Dehra Dun, has been published by General Walker, Surveyor-general of India. It extends one degree of latitude to the north and south beyond the former edition, and includes part of Afghanistan crossed by our troops during the recent campaign, and much information has been obtained from the Survey officers attached to the army, and details of the routes between Khelat, Quetta, and Kandahar. The course of the

Upper Oxus is more clearly made known than before; beyond the Himalaya, some important rivers and affluents of the Indus have been traced to their sources in Kohistan; and Tirich Mir, the highest peak of the Hindu Kush, provisionally estimated at twenty-three thousand four hundred, is now assumed to be from three to four thousand feet higher. And this new map with its rectified particulars shews in the north-east 'what a large extent of *terra incognita* still remains to tempt any enterprising explorer—be he Russian or Englishman—to visit those regions.'

Bishop Caldwell, in an address to the graduates of Madras University, pointed out that there lay open to the educated natives of India a rich field of research in which they could work to more advantage than Europeans. This field is the history of their country as contained in inscriptions on the walls of temples in almost every village. By study of those ancient records, light would be thrown on what is at present a very obscure subject, and more or less legendary and mythical. Natives have no reason to fear the sun, and can therefore search for inscriptions without the risk to which Europeans would be exposed; moreover, they can explore without exciting suspicion, and antiquities and private evidences, concealed from strangers, would be shewn to them. Search might also be made for old vernacular books that are supposed to be lost, with a view towards a history and comparative study of languages. And for this the neighbourhood of Madras affords ample scope. The Dravidian family includes fourteen languages and thirty dialects, and in addition there are Sanskrit and Hindustani. In Calcutta and Bombay, where educated natives have applied themselves to these studies, the results have been valuable and encouraging; and if vernaculars are compared, and ancient forms with modern, it would soon be found that language has a history of its own, throwing light on all other histories. 'A further advantage,' as the prelate remarked, 'might be realised in time in the commencement and development of a good modern vernacular literature—a literature equal—if that were possible—to the ancient literature in beauty of form, and superior to it—which would be possible enough—in the value of its subject-matter.'

In the northern part of Scotland, the shire of Sutherland occupies an area of eighteen hundred square miles, comprising for the most part mountains, moors, and bogs, penetrated by great lochs of sea and fresh water, which occasion 'a dampness at all seasons of the year, more favourable to the growth of grass than of cereal crops.' Brooks and streams are almost innumerable; and yet at the beginning of the present century there was but one bridge, and scarcely a thoroughfare which could be called a road. Love of work and cleanliness were unknown among the inhabitants, who dwelt with their live-stock in miserable huts built of turf and poles, which, when they became too filthy even for Sutherlanders, were abandoned, and the poles pulled out were used in the erection

of others after the same pattern. Squalor and starvation were the common lot.

The wonders effected in the shape of agricultural improvement on this large territory by the present Duke of Sutherland, were described some time ago in these pages (December 19, 1874). Improvements are still proceeding. An interesting paper on the subject by Mr Roberts of Haslemere, is given in the last number of the *Journal of the Royal Agricultural Society*. The present Duke, who, as is well known, delights in mechanical operations, having seen some years ago the ineffectual endeavour to till bog and moorland by means of an ordinary plough driven by a portable steam-engine, substituted two fourteen horse-power engines, and a plough carrying a single huge turn-furrow, in place of the four usually employed. This plough is 'never overturned, and the steadiness with which it tears its way through inequalities of surface, over sharp ridges and abrupt hollows, is marvellous.'

To enable the heavy engines to travel over soft ground, the wheels are made five feet diameter with a tire twenty inches broad, which, by movable rings applicable at pleasure, can be increased to three feet eight inches. The difficulties would have disheartened anything short of the most resolute and intelligent perseverance: big boulders and old bulky roots of firs stopped the plough repeatedly, and were hauled out bodily by the engine, or started by a sixpenny charge of dynamite. To save the plough from injury, the Duke's Secretary invented a revolving coulter, a vertical steel disk, which when it met a stubborn obstruction lifted the plough over; and the Duke suggested the adoption of a large iron hook similar to the fluke of an anchor, which, trailing behind the plough, acted as a subsoiler, stirring the land to a depth of from eight to eighteen inches. At times, prodigious quantities of stones, likened to the refuse of a quarry, lurked beneath the surface; and from one of the fields one hundred and fifty tons of stone to the acre were collected. Here the steam-power rendered signal service by hauling the stones away over soft ground on sledges at the rate of two hundred tons a day. In like manner, when trees were to be removed, a chain from the engine passed round half-a-dozen stems, speedily uprooted the whole group.

From these few particulars, some idea may be formed of the magnitude of the work of reclamation in the wilds of Sutherland. Similar ingenuity has been shewn in the laying out of roads, in fencing, and the erection of suitable buildings. Nearly three thousand acres have been reclaimed, and the work begun in 1873 is still progressing. The results are thus described: instead of 'moor and bog, there are now to be seen large and well-cultivated farms, each with a well-built and ample steading, surrounded by large rectangular fields, well fenced, and covered with luxuriant crops of oats, turnips, and grass. Good roads give access to each field; and here and there, amid grazing sheep and cattle and the ordinary features of farm tillage, smoke rises from engines employed for traction on the roads or in cultivating the land. Scattered over the plain are numerous labourers' cottages, a smithy, workshops, a school-church, and a post-office—a scene of fruitfulness and rural activity instead of a dark lifeless expanse of moorland.'

the same precept which has come down from the days of chivalry. The Sutherlands for some generations to come will be able to testify that in the present instance it has been nobly verified.

The same *Journal* shews that waste hill-lands can be turned to profit in the breeding of ponies; and further points out a way by which a farm labourer may keep a cow, and thus provide milk for his family. Milk is so essential in building up the bones and muscles of children, and is so nutritious generally, as thereby to furnish inducement enough towards cow-keeping. At Loton Park, Sir Baldwin Leighton's estate in Shropshire, four labourers out of six have grass-lands and keep cows. Their wives attend to the cow and do all the labour required. The net profit to them from a cow has been five or six shillings a week.

The government of Prussia is considering over the means of improving water communications by 'regulating' five of the principal rivers of the monarchy—namely, the Rhine, the Elbe, the Weser, the Oder, and the Vistula. It will be a mighty task, for the Elbe alone takes in the drainage of all the rivers of Bohemia, and carries away in a year five milliards of cubic metres of water, containing 455,950 tons of suspended matter, and 518,900 tons of dissolved substances.

A Committee of the Franklin Institute, Philadelphia, have reported favourably on a machine for dressing hemp, flax, and other fibrous plants, which was invented in France in 1874. It occupies a floor-space of about ten feet by eight, and is so constructed as to carry on at the same time the distinct operations of 'breaking' and 'scutching.' By a combination of fluted rollers and a fan, the fibre is delivered free from husk or straw in straight untangled lines in less than a minute from the time of feeding in. Besides being rapid in its action, this machine is free from delicate and nicely to be adjusted parts, requires comparatively little power to drive, and does not need skilled labour to operate it. To quote the Report: 'The introduction and general use of this machine would without doubt tend to restore and extend the cultivation of such fibrous plants as flax, hemp, jute, and others of a similar nature, by enabling producers to deliver these several fibres in a clean, straight, long-line marketable shape, at low cost. Unlike cotton, which is comparatively a delicate plant, that can only be grown profitably in the southern and south-western States, flax and kindred plants may be grown readily throughout our entire country. Light soils are more suitable for its development; but good crops may be gathered from strong and clayey ground.' The inventor of this praiseworthy machine is Norbert de Landtsheer.

At a recent meeting of the French Physical Society, a description was given of the speaking-machine, invented by Mr Faber, who has earnestly devoted himself to the production of artificial speech. The machine comprises a larynx, movable lips, a buccal cavity in which a tongue is free to move, an ivory reed in place of vocal chords, and a nasal cavity. Diaphragms of different form vary their position by means of keys or pedals, and by varying the forms of the cavities in which they operate, produce the vowel sounds, while the consonants are brought out by the movement of the lips and tongue. Fourteen keys suffice for all

the articulations; the pitch can be modified at pleasure; and the imitation of the human voice is said to be sufficiently satisfactory.

That the different colours of the spectrum have an influence on vegetation, has long been known. Plants grown under green glass soon die; under red glass they live a long time, but become pale and slender. Mr Yung of the University of Geneva has placed the eggs of frogs and fishes in similar conditions, and found that violet light quickens their development; and blue, yellow, and white also, but in a lesser degree. Tadpoles on the contrary die sooner in coloured light than in white light. As regards frogs, Mr Yung has ascertained that their development is not stopped by darkness, as some observers have supposed, but that the process is much slower than in the light.

We have the pleasure of acknowledging the following donations in behalf of the Fallen Women Mission: Alexander Semple, Maida Vale, L.3; A Friend, L.5; J. R., 1s. 2d.; Mrs Gordon, 12 The College, Northfleet, Kent, L.1.

#### 'I'LL HOLD BY YOUR HAND, MOTHER.'

'Shouldst not thou like, my child, to be  
With Him in that blest land  
Where He is gone to make for us  
A home not formed by hand?'

'I do not know,' she answered me,  
That little simple child,  
Whose lesson for the Sabbath school  
A half-hour had beguiled.

'My pet,' I said, 'suppose our Queen  
Had sent to bid you come  
Into her palace bright and rich  
To make for you a home—'

'Suppose that toys, and food, and dress,  
And all things rich and rare,  
Were there provided for your use,  
And joys beyond compare—'

'Wouldst not thou gladly leave this home,  
With all thou carest for here,  
To dwell in that far better one,  
That bright and joyous sphere?'

'And heaven, my child, is brighter far!  
Nor could my words declare—  
Eye hath not seen, nor ear hath heard,  
The joys that wait us there!'

'Wouldst not thou like, then, little one,  
To go to that sweet home  
Where all God's own shall surely meet,  
All Christ's redeemed shall come?'

A smile lit up her little face,  
As gently she replied:  
'Yes, mother; by your hand I'll hold,  
And enter at your side.'

## THE RESTORATION MOVEMENT.

### SECOND ARTICLE.

IN the olden time, Scotland, as may be supposed, could not present such a grand array of ecclesiastical structures as England; still in some instances those which it did possess were of an imposing character, in the best styles of Gothic art from the twelfth till the fifteenth century. Scotland was rich in abbeys, especially in the southern part of the kingdom; and it had a fair number of cathedrals, most of which still survive. It is a common belief that the ruin, which to a greater or lesser extent overtook the ecclesiastical edifices, was effected by infuriated mobs at the Reformation. No doubt, much damage was done by this irregular agency; but it was trifling in comparison with the destruction by military violence in the course of invasions from England. Passing over casual raids of this kind, the era of deliberate ruin was in the reign of Henry VIII. Armies were sent into Scotland in 1544 and 1545—twelve to fifteen years before the Scottish Reformation, and on one or other of these occasions the Abbeys of Melrose, Dryburgh, Jedburgh, Kelso, and Coldingham were partially or wholly destroyed; while in the more remote parts of the kingdom English agents prosecuted similar acts of barbarity.

Coming next in order were the ravages committed by bodies of native reformers, whose rage, however, was chiefly expended on the internal decorations of churches and the dwellings of the monks; the fabrics still standing being for the greater part left intact. As following these proceedings came the armies of the Lords of the Congregation, who authoritatively swept away the cloisters and other dependent parts of the monastic buildings, as well as such internal fittings in the churches as had been left. Such was the manner in which the outworks of the Abbeys of Paisley, Kilwinning, and Dunfermline were treated in 1559. Excepting, therefore, as arising from the indiscriminate destruction inspired by Henry VIII., the church part of the monastic establishments,

and the cathedrals, suffered comparatively little damage. For the ruin that laid so many grand old buildings in the dust, more is to be ascribed to neglect than to wilful violence. Here and there, as in a few cases that will come under notice, the public authorities did their best to keep the violated buildings in a state of repair; but in most cases they were left to sink to decay. For want of care, roofs fell, the rain got into the walls, which gradually sunk to the ground, and to finish the melancholy tale, the materials were often stolen under cognisance of those who ought to have prevented such dilapidations.

Elgin Cathedral, a building of magnificent proportions, constructed in the best style of Gothic architecture, and profusely decorated, survived the Reformation ten years, when (1568) by an order from the Scottish Privy Council, it was stripped of its lead to raise funds for paying the soldiers of the Regent Murray. This scandalous transaction met with its merited punishment; for the ship employed to transport the metal to Holland for sale sunk with all its cargo. The result was the gradual decay and ruin of the building, which neither the local magistracy nor any one else took effectual care to avert; and only of late years have means been adopted to prevent peculation from the remains of this beautiful structure. By a reasonable degree of care and a small outlay of money, Elgin Cathedral, a building which might have been the glory of the north of Scotland, would have been saved to the country. The Abbey of Arbroath, which was more spacious than the Cathedral of Elgin, also suffered from neglect, and even worse. The municipal authorities were in the habit of selling its materials, by which means little of it has been left, and it would have disappeared altogether but for the interference of the government.

From the combined causes now summarised, much valuable property was lost. Buildings which would now be artistically priceless, have sunk to the condition of weather-beaten and mouldering fragments. Such, after the lapse of three centuries, being frequently all that remain

to attest their architectural beauty, and to draw a sigh of regret from the passing tourist. Among those buildings which were preserved from the worst forms of outrage were the Abbey Church of Paisley, the Cathedral of St Mungo, Glasgow, the Collegiate Church of St Giles, Edinburgh, and a few others. Some which had partially suffered, such as the Cathedrals of Dunblane and Dunkeld, the Cathedral of St Magnus, Kirkwall, in Orkney, and the Abbey of Dunfermline, have been put in repair, and now respectively serve the purpose of parish churches.

Glasgow Cathedral, happily saved, and classed as property pertaining to the crown, has from the days of the Reformation downwards enjoyed the protection of the Magistrates and Town Council, who, as appears from their records, have often expended money to keep the building in repair, and to adapt it to the wants of the community. For general accommodation, it was partitioned and allotted for different congregations—one in the choir, another in the nave, and a third in the crypt, a curious semi-underground portion beneath the choir. In this last-mentioned place of worship took place the mysterious meeting of young Osbaldiston with Rob Roy, as fancifully described by the author of 'Waverley.' The choir, known as the Inner High Kirk, was the place of meeting of a more real and momentous nature. Here met the General Assembly of the Scottish Church in 1638, which abolished the Episcopacy of Charles I., re-established Presbytery, and ratified the National Covenant. Shortly after the Restoration of Charles II., there was a statutory resumption of Episcopacy (minus the canons and Service Book), in which Robert Leighton, one of the most amiable and enlightened theologians of his age, was appointed Archbishop of Glasgow, 1670; but he held the office only four years. Disgusted with the violent proceedings of the Scottish administration, he retired into private life, and died in 1684.

At the Revolution settlement, Scotland reverted to the Presbyterian polity, 1690, when the ancient fane of St Mungo lost its status as a cathedral. Irrespective of ecclesiastical distinction, the arrangement of the building into three churches under one roof continued till 1798, when the congregation that assembled in the crypt removed to another church which was provided for it. The other two congregations remained until 1836, when, to make way for a general restoration in conformity with modern tastes, one of them was provided for elsewhere at the cost of the civic corporation, and the only one left was that in the choir. That the Restoration Movement should have spread to Scotland, might, all things considered, be matter for surprise; but the wonder is the greater that it should have been first manifested in Glasgow. No fact could be more significant of the general spontaneity of this new and remarkable movement. There had latterly been growing up a spirit of emulation as regards

tastefulness in the building of churches, and to this the desire to see the ancient Cathedral of St Mungo restored to something like its original grandeur, was probably due.

Being crown property, the work of restoration was effected by government at an expense of twelve to thirteen thousand pounds, spread over a number of years. Though the cost was comparatively small, the restoration was well executed. The division walls, galleries, and staircases were removed. The building was opened up throughout, shewing the fine rows of pillars and other graceful points in the architecture. The choir, which is reached by some steps from the nave, was alone fitted up for service. Including the crypt, chapter-house, and clerestory windows, there are nearly a hundred windows in the building, the most of which have been filled with stained glass on a well-considered general plan, at the cost of private donors, chiefly connected with the west of Scotland. There being no Dean and Chapter, the custody and supervision of the building has been placed by government in the hands of the magistrates and council. On two days of the week, visitors are admitted on paying a fee of twopence to officers appointed by Her Majesty's Board of Works; and on four days the entrance is free. No monumental tablets can be placed in the cathedral without the sanction of the government, by which scrupulous arrangement there is a guarantee that the building will not be filled with monuments to persons of inferior note.

Usually styled a cathedral, in virtue of its ancient character, the building is ecclesiastically only a parish church (technically St Mungo's), which in its improved form was opened for public worship in 1856. No stranger arriving in Glasgow, with a few hours to spare, should omit to visit this very interesting edifice, which presents admirable specimens of ecclesiastical architecture from the twelfth to the fifteenth century.

Next in the order of restoration was the Abbey of Paisley, a fine Gothic structure of the twelfth and thirteenth century, which had been sacked and partially destroyed at the Reformation, when its rich endowments were gifted by the Regent Murray to Lord Sempill, and subsequently came into the family of Abercorn. The nave, which had been saved, was subsequently fitted up as the parish church. Its condition in later times is described by the Rev. Dr J. Cameron Lees, in his scholarly and very interesting work, 'The Abbey of Paisley' (1 volume 4to, 1878). He says that 'In 1859 the church was in a most disreputable state. The burial-ground outside the building covered the whole basement of the church up to the windows. The interior was like a vault in a graveyard. Water ran down the walls, and an unwholesome smell pervaded every part of the church. Heavy galleries round the place cut the pillars in two. The clerestory windows were blocked up, and whitewash was freely used. The

whole of the moulding at the base of the pillars was hidden out of sight in the soil. Round the floor of the church was a wide circular passage, with huge iron stoves placed in it at intervals. This passage formed a promenade for stragglers during the time of service, who perambulated from one end to another, occasionally lighting their pipes at them before going out, which they did whenever they were tired of listening, a frequent enough occurrence. A more dreary place of worship could scarcely be imagined. A street of disreputable pawn-shops and public-houses abutted on the church, which was entirely hidden by the squalid buildings around it.

This graphic picture is consistent with our own recollections. The strange thing is that although Paisley had grown up to be a wealthy manufacturing place, and had produced more men of genius than any town of its size in Scotland, nobody thought of rescuing the building from the degradation into which it had sunk. At length came the dawn of improvement. In 1862, a restoration committee, chiefly organised by the Rev. Mr Wilson, one of the ministers of the parish, set vigorously to work. The unsightly galleries were taken down. The floor cleared of the accumulated rubbish of centuries. The body of the church re-seated. The clerestory windows opened up. The transept walls and windows restored, and the turrets rebuilt. Finally, the mean dwellings in the neighbourhood were removed, and the surroundings beautified. Men of all creeds, says Dr Lees, contributed to the work; the total cost of all that had been done being estimated at not less than about thirty thousand pounds. The architect employed was Mr James Salmon of Glasgow. The Abbey in its restored state is now a grand Gothic structure befitting its history, a credit to those benefactors who, generously lifting it out of its deplorable condition, clothed it in the solemn beauty which had been the admiration of kings and men of learning who have long since been resolved into dust.

Among the minor restorations of recent times in Scotland, may first be placed that of Roslin Chapel, as it is commonly called, an exquisitely beautiful relic of fifteenth-century art, situated about seven miles south of Edinburgh. It consists of the choir of a building designed to be a collegiate church, which was left unfinished by its founder, William St Clair, a member of the ancient baronial house of Roslin. The choir had not been long finished and used for religious service, when it was sacked at the Reformation. It was further despoiled by a mob at the Revolution of 1688, from which times till our own days it remained in a desolate condition, merely roofed from the weather, but always an object of interest on account of its elaborately decorated architecture. For richness of ornament its pillars may be designated perfectly unique. It was likewise attractive from historical and poetical association. Beneath its paved floor lie the barons of Roslin, said to have been buried in their armour, a circumstance not unnoticed by Sir Walter Scott in the ballad of 'Rosabelle':

'There are twenty of Roslin's barons bold  
Lie buried within that proud chapelle;  
Each one the holy vault doth hold—  
But the sea holds lovely Rosabelle.'

Thus in cold vacuity stood Roslin Chapel

throughout the eighteenth and far on in the nineteenth century, when by the revival of taste, it was cleansed and restored in all its original beauty by the late Earl of Rosslyn. It is now fitted up for public worship. Along with Hawthornden on the opposite bank of the North Esk, it forms an object of pilgrimage to tourists with a taste for the picturesque when visiting Edinburgh.

Another of the minor restorations is that of the ancient church of St Bride, in the town of Douglas, and close to Douglas Castle, the seat of the Douglasses, in the upper ward of Lanarkshire. Violated at the Reformation, and with so much of it destroyed that the only remnants of the original building were an aisle and spire, it still remained the burial-place of the Douglasses. Recently, the building has been dressed up and re-roofed, due regard having been paid to the preservation, as far as possible, of its original appearance and character, the whole being executed by Lord Dunglass, who succeeded in right of his mother as the lineal representative of the Douglas family. In the inside of the church, the repairs and restorations are extensive, costly, and beautiful. Among the old and partially defaced monuments which have been tastefully restored is that of the Good Sir James Douglas, the friend of Bruce, and the hero of Scott's 'Castle Dangerous.' A new monument, far excelling in splendour any of the old ones, is that erected to the memory of the late Countess of Home.

A more important restoration was effected on the Abbey of Jedburgh, one of the group of monastic establishments, including Melrose, Dryburgh, and Kelso, situated in a pleasant part of the south of Scotland. Of these the Abbey of Jedburgh, which alone has had the good fortune to be repaired and put in order, dates from the twelfth century, and exhibits specimens of architecture from the Norman to the decorated period. This variety is partly due to the vicissitudes it had the fate to undergo. In the first place, it suffered severely in the wars which ensued on the death of Alexander III., 1286. Next, from its proximity to the Border it was always in the way of being injured by invading armies from the south. And as has been said, it suffered heavily from the invasions in the reign of Henry VIII. After these successive attacks, there were costly repairs to be executed on doorways, turrets, or something or other, which formed a heavy drain on the resources of the ecclesiastical community. Hence the remarkable difference of styles of Gothic which crept over the building; for the older architects did not ordinarily execute serious repairs or make additions in the style of the original, but introduced work of a more ornamental character, according to what was prevalent at the period. In this manner Jedburgh Abbey may be taken as a good specimen of different varieties of Gothic, from the plain to the richly decorated, over a space of three hundred years. The building might be said to embody a large section of history in its devices and stone carvings. Thus, we hail it as an enduring and very precious memorial of the past.

Though sacked at the Reformation, the building was not destroyed. A portion of it was appropriated as the parish church, which church was within our recollection a hideous huddle of pews

I could but notice that she and I were included in a common pity and tenderness. People lowered their voices to speak to her, as they did in my own case, as though she too were weak, and coming slowly back from some heavy illness.

On all half-holidays Gascoigne came to me, with news of my school-fellows—who was trying for this prize and who for that—who was captain of the second cricketing eleven, and who made top score, and who took most wickets in the last match against the neighbouring school at Dean. He was an enthusiastic cricketer, and I knew how much he sacrificed in spending all these summer afternoons with me; but he would not be forbidden.

The last of all my little circle to be admitted to my chamber was Polly. The Doctor had decided that I might be taken down-stairs next day. He was an odd-looking man, the Doctor; not unlike a jackdaw in outward seeming; and he stood by my bedside with a bird-like eye upon me, when the door opened, and Sally made a dart at it with a warning finger raised. The Doctor looked round. 'Aha!' he said—'the little lady. Let her come in, nurse. Let her come in.'

Polly came in with round blue eyes wide open; and climbing the bed, gravely sat down upon the pillow.

'Nurse,' said the Doctor, limping across the room, 'you will ask this young lady to be very quiet, if you please.—You will be very quiet, won't you?' He turned on Polly with his bird-like eye, and using his club-foot as a pivot to turn on. 'Eh, my dear? Eh?'

Polly nodded gravely.

'That's well,' said the Doctor, and pivoted himself round on Sally. 'No draughts to-morrow, nurse. We mustn't have the little man catch cold.'

Pursued by Sally with assurances that the greatest care should be taken of me, the Doctor limped from the room, and Polly and I were left alone. In answer to all I asked her, Polly said simply 'Yes' and 'No,' and comported herself altogether with a most supernatural and weighty gravity. The evening was advancing, and the room was growing gray with twilight. Since I had ceased to question Polly, she had spoken never a word. I was a little wounded. Perhaps illness had made me fretful and exacting, but I could not help thinking that Polly might have been better pleased to find me growing well again. We kept silence until Sally returned, bearing the lamp with her.

'Now, Miss Mary,' said Sally, 'it's pretty nigh time as you was in bed.'

'I s'an't go to bed,' Polly answered with calm decisiveness; and looking at her then, I saw that she had been crying, and was crying still.

'Why, Miss Mary,' said Sally, 'you wouldn't make a worrit in Master Johnny's room, I'm sure, an' him that poorly.'

'Jack,' said Polly, suddenly breaking into sobs, and flinging herself upon the bed, 'don't be an angel! Oh, don't, don't, Jack!'

'Why, bless your pretty little heart alive, my darlin', no!' ejaculated Sally, raising her.

But Polly would have the assurance from my own lips, and I gave it seriously. I was as unconscious of any element of comedy in that assurance as Polly herself was.

'They'm hearts o' gold,' said Sally caressingly—'they'm hearts o' gold, they am, both on 'em.'

'If oo goes for an angel,' said Polly, fixedly regarding me, 'I'll never be a good girl any more.' Then she relaxed, and kissed me fondly; and I again announced my intention not to be an angel, and so we said good-night.

Next morning I was dressed and carefully wrapped up and carried down-stairs like a parcel. I had not seen Mr Fairholt since the beginning of my illness, and I have learned since then that he had asked no questions about me, and had been apparently oblivious of my existence. When I saw him that day, I was amazed to find how old and gray and withered he had grown. He looked as if he had been as near Death's door as I had. I took occasion to ask Sally if he had been ill. She shook her head in answer, and said 'No;,' but I heard her murmur something about a 'peck of trouble' and 'poor old gentleman,' as she turned away.

Later in the day, when Maud was reading to me, and Polly was sitting on a footstool at my feet, Cousin Will came in, and stayed to hear the finish of *The Ugly Duckling*. When the story was read through, Maud crossed over to him and sat beside him in the window-seat. They spoke together in low tones for a time; but I heard one fragment of their talk.

'It is possible,' he was saying, 'that we may learn something from him.'

'I fear not,' Maud answered.

'We must wait awhile,' said Cousin Will.

'It would be unwise,' said Maud, 'to question him until he grows stronger.'

There they both looked at me, and I saw that the latter part of their conversation referred to me. Next day Maud said 'Good-bye,' and I was wheeled to the window to see Cousin Will drive her home. She had promised that she would come again and see me very soon; but a fortnight elapsed before we met again. I had not even then recovered my full strength, but all fear of a relapse was long since over; and Sally had told me in the morning that I was to have a good long drive that day. Maud came in a dainty little carriage, drawn by two charming ponies. She had driven alone, as I learned that she was fond of doing; but when we went away together, Cousin Will came with us. I was well wrapped up, and the autumn air was balmy and warm. Oh, the quiet yet exquisite delight of that escape from prisoning walls—the rousing motion as the two bay ponies swept along! The jingle of their harness made a merry tune, and their feet came down in time to it, and the wheels hummed to it, and birds and trees warbled and murmured in rare harmony. The free wide fields, the rolling river, and the bounteous air, what fresh delight filled them all! A road, so white it made me wink to look at it as we dashed along in the dazzling sunshine, led us at last to a pair of enormous gates of open ironwork, with much gilded scrollwork, and many gilded spikes—the veritable gates of fairyland they seemed. And a veritable fairyland it seemed within, with the vast house in the distance, whose every window shone so in the sun, that it might have been filled with diamonds and gleamed no brighter; with countless plants and flowers of strange and splendid form and hue on either side, as we swept up the

broad path leading to that noble mansion; and far away to the right a lovely sheet of water, with the latest friends of The Ugly Duckling, gliding to and fro upon its placid surface. These things all led to one conclusion; and when a gorgeous creature received us at the door, a being with white hair and white stockings and canary coloured breeches and a sky-blue coat, and instead of ordering us off the premises, received us with all evidence of deep respect, I should have been less than a child had it been less than fairyland, or had Maud been other than a fairy princess.

Within the house we were encountered by a stout elderly man with a bald head and a red face. 'Hallo, Fairholt!' this gentleman shouted. 'How de doo? This the patient, eh? How's the little feller, now?—Better? That's right. Come in an' pick a bit o' somethin' or other. Lunch is on the table, an' I'm hungry enough for ten men. No blessin' like a appetite, when you've got the stuff to let it loose on.' Talking thus, he led the way into a great room, before whose glories those of Mr Fairholt's house grew pale in memory. If I had at this time nothing but memory to fall back upon, I should probably still think this apartment the most magnificent in the world. But my later knowledge of the gilded splendours of Hartley Hall has shewn me that they were a little worse than vulgar.

'No news?' asked Mr Hartley—so Will called him—Maud was mincing chicken on my plate, and the old man gave one swift glance towards her as he said it. Cousin Will shook his head in silence; and I looking at Maud; saw that her lips trembled faintly.

Mr Hartley ate gravely for a time, and looking up, caught me in the act of staring at him. He dropped his knife and fork with a crash, and laid his great red hands on the cloth and looked at me. 'By Jove!' he said slowly, looking round at Will and Maud, 'I never saw such a likeness in all my life afore. Never!'

'Such a likeness, uncle?' said Maud. 'Where?'

'Wheer?' exclaimed Mr Hartley. 'Why, theer.' And taking up his knife again, he pointed at me. 'Why, he's the very livin' image.'

'Be calm, Mr Hartley,' said Cousin Will, rising and walking round the table to me. 'You alarm the child. He is far from strong yet.'

'Calm!' said Mr Hartley, taking up his fork and attacking his plate again. 'I'm calm enough. But it's the most extr'ordinary strikin' likeness I ever set eyes on in all my born days.' He looked at me again, and arose from the table.—'Take care o' the little chap, Maud,' he said with a gentleness which contrasted strongly with the haste with which he had arisen.—'Here, come with me, Fairholt; I want to speak to you a minute.'

Will left me with a reassuring pat upon the shoulder, and followed Mr Hartley to the far-end of the room, where they talked eagerly together for five minutes.

'I'll tell you what I'll do,' said Will, as they came away together towards the table; 'I'll drive over at once and bring her with me.'

'Finish your lunch first,' said Mr Hartley, ringing the bell.—'Order the dog-cart round at once,' he called to the servant almost before the door was opened.

The meal was finished in silence. The footman announced that the dog-cart was in readiness;

and Mr Hartley and Cousin Will left the room together. Maud, in evident surprise and wonder, led me to a couch near the window, and made me lie down there in the sunshine, setting up a firescreen to shade my face.

'Are you strong enough to talk, dear?' she asked me.

I answered that I felt quite strong and well.

'Shall you be troubled if I ask you what frightened you on the night when you fell ill?'

'No,' I answered. 'I saw a face at the window.'

'Gascoigne, your playfellow,' she went on, 'says that you cried out "The face!" Had you ever seen the face before?'

I told her everything then; much as I have set it down at the beginning of this narrative.

She heard me to the end, and then said with voice and eyes of appeal: 'If ever you should see him again, dear, don't be afraid of him, but speak to him. No, darling, no; he will not hurt you. It is not in his heart to hurt anything. But he is most unhappy—oh, most unhappy! If ever you see him again, speak to him, and tell him that everybody has forgiven him. Tell him that unless he comes back again, our hearts are broken. Tell him that unless he comes back again, I shall die.' There she fell forward on her knees, and drooped her head against the couch on which I lay, and broke into passionate weeping. The intensity of eagerness with which she had spoken these last words, and the uncontrolled agony of tears in which she knelt, alarmed me beyond measure. I could think of nothing to be done except to put my arms about her neck and soothe her and promise that I would—I would indeed. After a time she cried less passionately; and when she had partly resecured her self-control, she arose. 'Don't tell anybody of this, darling,' she said. 'But never forget what I have asked you.'

I promised faithfully; and she left the room, still crying, but quite quietly. I sat alone and wondered at it all, as I think I well might. The unaccustomed exercise of the drive, the hearty meal I had eaten after it, and the agitation of mind I had twice experienced, were too much for me, and by-and-by wonder lost itself in sleep. When I awoke there were voices in the room, and I had a shawl thrown over me.

'Oh,' said Mr Hartley's voice, 'so you've known him since the day he was born, eh?'

'Yes sir,' said a voice, which I knew at once to be Sally's. 'I dressed him the very second time as ever he was dressed, sir.'

Hearing this, I put aside the shawl which covered me and sat up. Sally, Cousin Will, and Mr Hartley were standing together on the rug before the fireplace, and Sally's face wore an expression of anxiety and fear.

'Did you know his mother before her marriage?' Mr Hartley asked.

'Yes sir; pore dear, I did sir,' Sally answered. 'My mother nussed her when her was a baby.'

'Hay?' said Mr Hartley. 'What did you say your name was?—Ah, Troman; of course, of course. Are you old Troman's daughter, that lived in the cottage by the quarry?'

'Yes sir, please sir,' Sally answered, courtesying.

'Well, what was his mother's maiden name?'

'Isabella Hartley, sir,' said Sally.

'Who did she marry?'

'Mr John Campbell, sir, at the Baker's Green ironworks, sir,' Sally answered.

'And he's their only child, is he?' Mr Hartley went on.

'For sure he is, sir,' Sally answered.

'That's what you'd call a chain o' evidence if you like.—Ain't it, Fairholt?' said Mr Hartley turning round upon Cousin Will, and thrusting a forefinger at his waistcoat.

'It's certainly complete enough,' Will answered.

Mr Hartley turned back to Sally. 'Did you ever see his mother's brother Ben, young woman? A blackguard bit of a chap, as run away, an' was never heard on for 'ears an' 'ears?'

'I seen him once, sir,' said Sally; 'but I never knowed no harm of him, sir. They was all decent people.'

'What'll you bet you haven't seen him twice?' Mr Hartley asked with a twinkle in his eye.

'Well, I never!' ejaculated Sally, in a tone of sudden recognition and surprise.

Mr Hartley burst into a great roar of laughter, and catching sight of me, stopped suddenly. 'An' if here,' he said, 'ain't my new-found newew a-listein' to it all! Why, blame me if it ain't as good as a play.—Come an' kiss your uncle, Johnny.—Bless my heart alive, missis, sit down, an' have a glass o' wine.—O nonsense, nonsense! Don't stand curtcheyin' as if you was afraid o' me. Why you an' me ought to know each other. Your mother an' my mother brought me into the world together, between 'em. Well, well, well! Bless my heart alive! An' who'd ha' thought it?'

Sally explained everything to me that afternoon as Mr Hartley's groom drove us home. When we were landed there, Sally carried me bodily to my bedroom, and setting me down upon the bed wept over me according to custom. 'And oh!' she cried at last, holding me at arm's-length by the shoulders, 'if Heaven ain't a-raisin' up friends for him everywhere.'

My aunt Bertha went over to Hartley Hall next day, and for a week or two there was a great driving to and fro between the houses. Finally, Sally was added to the list of Mr Hartley's domestics, on the understanding that she was engaged solely for my behoof and benefit; and I was transferred from the house of Mr Fairholt to that of Mr Hartley. Polly and I were alike inconsolable at first; but frequent visits were promised on either side, and once more the barque of Childhood's Hope sailed free before the wind.

### COMMONPLACE-BOOKS.

THE practice almost universally followed by the great scholars in olden times, of making copious extracts from the books they read, seems to have fallen into comparative desuetude in our day. In the sixteenth and seventeenth centuries everybody who aspired to the character of a scholar was most assiduous in transferring to his volumes of *Adversaria* choice passages met with in the prosecution of his studies. Thus it happens that so many commonplace-books are to be found in the great collections of manuscripts in the British Museum, the Bodleian Library at Oxford, the University Library at Cambridge, the Vatican

Library at Rome, and indeed in all the public libraries of Europe.

A commonplace-book may be described as a book in which things to be remembered are ranged under general heads. In a properly ordered volume of this kind all the entries should be duly arranged under their *Loci Communes*—common 'places' or 'topics.' A great number of the classical writers of antiquity were most diligent in collecting and arranging *excerpta*. Cicero, for example, himself informs us that he never passed a day without reading and writing something at home; constantly taking notes and making comments on what he read. Plutarch always carried a commonplace-book with him, and preserved with the greatest care whatever judicious observations fell in the course of conversation; and Pliny the Younger says of his illustrious uncle, that he never read a book without making extracts from it; for he used to remark that there was no book so bad but that something interesting could be found in it.

It might perhaps be imagined that this practice of laborious transcription, though absolutely necessary in an age when literary productions, being all in manuscript, were very rare and costly, would gradually decline and die out when the printing-press had made books much cheaper and more accessible. The reverse was the case. The scholars who assisted in the revival of learning outstripped their classical predecessors in the zeal with which they betook themselves to the filling up of their ponderous commonplace tomes.

In the *Advancement of Learning*, Lord Bacon writes: 'For the disposition and collocation of that knowledge which we preserve in writing, it consisteth in a good digest of commonplaces; wherein I am not ignorant of the prejudice imputed to the use of commonplace-books, as causing a retardation of reading, and some sloth or relaxation of memory. But because it is but a counterfeit thing in knowledges to be forward and pregnant, except a man be deep and full, I hold the entry of commonplaces to be a matter of great use and essence in studying, as that which assureth copie [that is, copiousness] of invention, and contracteth judgment to a strength.'

It has been said that the practice of extracting has a tendency to cause a torpidity of recollection; for, say the objectors, a person would not have so great a care to retain a fact in his memory if he were aware that he could find it in his note-book. There is a show of reason in this objection; but it can apply only to those who make extracts from the mere love of scribbling; certainly not to those who make a proper use of their *excerpta* with the design of improving and refreshing the memory. For this purpose the notes should be frequently reperused; and by this means it cannot be denied that many facts may be preserved which would otherwise have entirely faded from the memory. As a matter of fact, many of those scholars whose powers of memory have been developed to a remarkable degree, have been most assiduous in regularly posting up their commonplace-books. The historian of the *Decline and Fall of the Roman Empire* has indeed expressed an opinion that what is read twice is retained better than what is once transcribed. But surely this reasoning confutes itself, because, before a passage is copied into a commonplace-book, it is necessary

to read that passage, which is consequently read twice and written once. It is particularly worthy of remark, that while Gibbon professed to reprehend the system of commonplacing, he was most industrious in putting it in practice. This inconsistency reminds one of the witty remark of Dr Thomas Fuller, who in his *Holy State* observes: 'I know some have a prejudice against commonplace-books, and yet perchance will privately make use of what publicly they declaim against. A commonplace-book contains many notions in garrison, whence the owner may draw out an army into the field on competent warning.'

Among other eminent men of modern times who have kept commonplace-books may be mentioned Bishop Jewell, Dr Donne, Milton, Leibnitz, Locke, and Count Joseph de Maistre. Robert Southey was an incessant maker of notes, and selections from his commonplace-books have been published in four thick quarto volumes. Benjamin Franklin commends the practice when he says: 'I would advise you to read with a pen in your hand, and enter in a book short notes of what you find that is curious or that may be useful; for this will be the best method of imprinting such particulars in your memory, where they will be ready either for practice on some future occasion, if they are matters of utility; or at least to adorn and improve your conversation, if they are rather points of curiosity.' Finally, Dugald Stewart remarks: 'What improvements in science might we not flatter ourselves with the hopes of accomplishing, had we only activity and industry to treasure up every plausible hint that occurs to us! Hardly a day passes when many such do not occur to ourselves, or are suggested by others; and detached and insulated as they may appear at present, some of them may perhaps afterwards, at the distance of years, furnish the keystone of an important system.'

It must not be supposed that erudite scholars and antiquaries were the only class of men who kept commonplace-books. The purveyors of light literature did not disdain this useful aid to study. Butler made large collections before he began his *Hudibras*; and Addison filled several folio volumes before he ventured to undertake the task of writing the *Spectator*. Again, a writer in the *Tatler* says: 'I turned to my commonplace-book, and found his case under the word *Coquette*.' Mr George Augustus Sala, one of the most brilliant contributors to the light literature of our own day, has filled with his marvellous minute handwriting a vast number of elaborate commonplace-books. The example of Mr Sala, whose published works are so voluminous, and who has spent a considerable part of his life in active travel as a special correspondent, shews what may be done by acting on the principle of constantly taking notes.

If a student begins early in life to arrange extracts, and if he perseveres without intermission, he will find himself the possessor of an immense amount of valuable and workable literary material. The pasting of printed cuttings in a scrap-book or the purchase of a commonplace-book ready-made will not answer the purpose. The extracts must be selected, arranged, and copied by the person who is to turn them to profit. The earlier in life the work is begun, the better. The celebrated John Sturmius in old age used

to lament, with tears in his eyes, that he had neglected to keep commonplace-books when he was young; and Isaac Casaubon in the evening of his life used to say how deeply it grieved him to think that he had read many curious things which he had omitted to transfer to his *Adversaria*. Memoranda, extracts, and suggestions accumulate in a wonderful manner under the hand of the diligent student. Thus the late Mrs Jameson, in her *Commonplace-book of Thoughts, Memories, and Fancies* remarks: 'For many years I have been accustomed to make a memorandum of any thought which might come across me—if pen and paper were at hand—and to mark and remark any passage in a book which excited either a sympathetic or an antagonistic feeling. This collection of notes increased insensibly from day to day. The volumes on *Shakspeare's Women*, on *Sacred and Legendary Art*, and various other productions, sprang from seed thus lightly and casually sown, which, I hardly know how, grew up and expanded into a regular readable form, with a beginning, a middle, and an end.'

Enough has been said about the utility of keeping a commonplace-book; a few words may be added as to the method of arranging it. The following plan is a modification of that recommended by Drexelius, who wrote in the seventeenth century. Take two books—small quarto is the most convenient size—and entitle one of them *Adversaria* (notes or memoranda), and the other *Lemmata* (subjects or titles). The first is the receptacle of all long passages, and also of short extracts where no other matter is likely to be met with relating to the same subject. The heading of each entry should be written in the margin in a larger character than the rest, in order that it may attract attention. The extracts are to be entered as they occur, no particular order being observed. *Lemmata* is arranged on another plan. The headings are written in the margin in the same manner as the *Adversaria*, but between each a blank space of a page or half a page is to be left, for the reception of additional references. The entries in this book should consist chiefly of references and brief extracts, all long ones being inserted in the *Adversaria*. The headings need not be inserted in any regular order. When a space is filled up, a reference should be made in the margin to the page on which the subject is continued. A complete index, which must be carefully posted up in a third octavo volume, will furnish a ready means of referring to the treasures in both collections.

## THE BELLS OF YARRICK.

### A PROSE IDYLL, IN THREE SCENES.

#### SCENE I.

THE embers falling from the logs in the fireplace of the Vicarage parlour make comfortable sounds and sleepy; and the flames, playing a soft accompaniment, flicker, and wane, and flicker again. The fitful light deals tenderly with the furniture, treating it with chivalrous respect, as having seen better days; unlike the saucy sunbeams which, earlier, took delight in disclosing the rifts in the carpet, the battered condition of the chairs, the nudity of the wainscot. 'The unhealthy gloss

of newness is gone,' the Vicar would say when the nakedness of the land forced itself obtrusively upon his notice; this contentedly, and with an affectionate glance round. The remark was in sooth superfluous, but it seemed to afford satisfaction to the speaker. And though the furniture is shabby, there is an air of refinement withal. Here are we in the presence of books—books dispersed, pleasantly disordered, reposing in odd corners; faithful servants which perform double office, ministering intellectually, and distilling a subtle air of scholarship around. These the Vicar loves.

This morning an ominous stillness had reigned without. The sun had risen blood red, and its rays, expending force in breaking through the opposed phalanx of cloud, had reached the earth spent and exhausted. The clouds had flushed angrily, portending mischief; though the sunlight had triumphed at the first onslaught, the contest was not concluded. Later, on the lurid horizon great inky piles had gathered steadily from the eastward, banking themselves one upon another in mighty columns. Though the wind yet lay still, elemental strife impended. By rustics plodding homeward, soil-smeared and weary; by sun-tanned fishers making their boat garniture taut and ship-shape on the ferry beach, the foreboding stillness had been felt. Dennis Ladbroke, from the plough, had sung greeting to Harry Winn, bending over his nets. 'Wha' cheer, Ma'aster Winn? Looks main stormy!' And Harry, glancing skyward with puckering brow, had replied: 'It deu that!'

Before gloaming fell, the wind moaned, and sent forth a few fitful puffs to herald its approach. Boardsey Ferry answered responsive; with wavelets first, dimpling its face, presenting uneven surface—child's play this. Then the dark-green waters turned black. A gust or two more and the wavelets were fairly set by the ears; amongst them, confusion reigned supreme. They jostled together, slapping noisily; making great commotion when the wind blew their foam-caps into spray. Then child's play ceased, and the storm burst in earnest. Wavelets were engulfed; great rollers came surging up from the eastward, gathered in strength and volume, and fell with deafening thunder on the beach. Lightning, forked and jagged, gleamed from the cloud-rifts, intensifying the heavy pall of darkness which succeeded. Heaven's artillery roared; heavy sheets of rain beat on the seething waters.

On shore too the strife raged. Leaves whirled through the air, seeking resting-place, and finding none. Into nooks and crannies, through new-discovered apertures, the wind shrieked and screamed. Sturdy branches creaked and groaned in protestation at the disturbance; to spreading roots the strain was transmitted, and they had work to hold their own.

Yarrick is an old-world village on the east coast, where men struggle for existence in elementary fashion, unaided for the most part by mechanical appliance. Some seek the waters, and draw a precarious livelihood from them; others till the soil and sow the life-sustaining grain. Simple souls, yet none the less embodying much of the poetic tenderness of life; capable of feeling much in the soft mysticism of the autumn moonlight; to wit more gratitude than their lips can

express when the ripened ears grow heavy at golden harvest-tide. And in an old gambrel-roofed house which nestles under the North Wold hill in this pastoral parish, dwelt the Vicar. Far removed from the turmoil of great cities, his life had glided by comparatively eventless. His it had been to minister to the poor, and by the poor he was beloved; imperceptibly but steadily he had won his way to their hearts. Where trouble had fallen heaviest, he had been ever at hand to relieve; ready in thought, quick in action, he had long since won fealty alike of the hardy sons of the soil and of the toilers of the waters.

Once when the signal had boomed from the lifeboat station on the beach, only half the crew had assembled; two were down with fever, and the rest were away. Harry Winn, master, after calling the muster-roll, had stepped forth from the boat-shed into the darkness again and again, peering in vain through the driving sleet for the missing ones. He had seen a recurrent flash far to the eastward, and he knew that a doomed vessel was on the deadly Trull Bank. Then he had returned to the shed where his mates sat silent. He was not one to display much feeling, but he was sore troubled; he had traversed that awful three miles before when the boat was fully manned, and he well remembered the terrific fight between maddened waves and straining muscles. When he was seating himself in despair, the Vicar, telling him in a few earnest words how the use of the oar was new neither to himself nor to the friend who accompanied him, volunteered service. Winn had looked up doubtfully, but the Vicar's face had compelled trust. And when the first burst was over, and the boat, quivering in every plank, had emerged from the breakers, the master found that he had relied on no broken reed. Solid muscle and steady nerve were there; and henceforward the hardy coastmen opened their hearts to him whose spirit they felt had communion with theirs.

Again, when the village community had opposed an obstinate resistance to sanitary reform—such a steady dead-weight of opposition as only a village community is capable of—and when the sweet Yarrick air had been poisoned by the rotting heaps of garbage in the back-yards of the inhabitants, typhus had swooped down with bared fangs. The defenceless village became a hotbed of infection; work stood still, families were decimated, and great sorrow fell upon Yarrick. And in this time of trial too, the Vicar was at hand; where trouble was sorest, he confronted it; his was the ready hand to succour, his the glowing sympathy to cheer. The time of trouble passed away, and now where he goes there is sunshine; tanned faces glow ruddier and smile greeting when he passes; mothers' lips move to bless him; children toddle towards him, and place baby hands in his.

As the logs in the fireplace fall together and emit a sudden blaze, his face may be studied by its light; thought characterises it, gentleness softens it; it is the face of one taking retrospect—the Vicar is looking back. And his pupil, sitting by his side, is looking forward. Gerald Herrick is about to start on his career in the army; and loving his country, he has taken mental oath to work and, if need be, to die for her. Slight and well-knit in figure, eager and intelligent, he

seems well fitted for the path he has chosen ; to him life is a romantic mystery, filled with glorious and infinite possibilities. The attitudes of the two are expressive of that pleasant lassitude which steals over those who have eaten and are sheltered after having been long out of doors. They have been discussing some recent event interesting to both, and are occupied with thought.

Now Gerald speaks. 'You really think the answers I gave will have passed me, sir?'

The Vicar smiles pleasantly. 'I do, Gerald. From the report you give of them, you appear to have managed your paper most artistically.'

'Passing this examination would save me six long months. Who knows, sir, what chance of active service may not depend on it. I cannot but feel anxious.' And Gerald sighs.

'Your nervousness is only natural, Gerald, though I really believe there is no reason for anxiety. At anyrate you have worked bravely and steadily; and whether you have won your cadetship or not, you will have the satisfaction of knowing that you have done your best.'

The boy's eyes brighten; Gerald honours his master, and a little discriminating praise comes sweet after toil. He glances up quickly at the Vicar's face, then looks down; at sixteen the emotions are more apt to be expressed mutely than articulately. 'Denny was to wait at the post-office at Boardsey for the telegram; Winn promised not to cross the ferry without him, sir, he says.'

'Then if he is not already over, Gerald, he will have a wild crossing.'

Gerald rises, and walks towards the window. The wind without deals it a succession of heavy blows, causing it to shake noisily; and the rain, like discharged handfuls of shot, lashes it. Suddenly, through the clamour of the storm, borne fitfully but still distinctly audible, comes the sound of pealing bells. The Vicar raises his head, and his face flushes as he listens. 'Kind and thoughtful,' he murmurs; 'they have not forgotten!'

'Why are the bells ringing at this time, sir?'

'Ella was born six years ago to-night, Gerald. They ring to commemorate the little sunbeam's advent.' The Vicar's eyes have a dreamy far-off expression. Again the peal is heard; now his lips move. 'Sweet-voiced messengers, shaping their notes to Nature's moods. Well-loved sounds and sympathetic; sporting with the raging winds; borne to me in the bosom of the storm!'

Gerald holds his peace, and waits till the broken utterances cease. He has known his master in abstracted moods before this, and at such times he will listen sympathetically, in part understanding. 'How you love the bells, sir!'

'Their music is weft inseparably with the sweetest recollections of my life.' A pause, during which the Vicar gazes dreamily into the fire. 'When I sit listening to them, it all comes back to me—my father's home, my childhood, my past! When I came to Yarrick, I lost their music. I never dared to hope for its sweet companionship again; the parish was too poor to allow of even a dream of it. And then my father's friend, the patron of the living—peace be to his memory!—presented these bells to the church. Old friends come back to me—their voices pealed forth on my

marriage; and their music fell upon my ear when my child was born.'

Gerald's heart is moved towards his master; he rises and takes a step towards him, and his feeling finds outlet. 'To me too, sir, they are grown dear. I feel that when I am far away from Yarrick, I shall weave the memory of them with that of you, and shall so remember them for all time to come.'

The Vicar, recalled from his reverie, looks up into the boy's eager face; then he stretches out his hand, and says: 'Your words sound pleasantly, Gerald.' After a pause he adds slowly: 'And so you will never forget Yarrick, nor your old master?'

And Gerald answers: 'Never!'

A noise, as of the opening and closing of doors; then of voices, female treble and male bass, holding dispute concerning rain-soaked garments. The treble protestations appear to be overborne.

'That is Dennis,' remarks the Vicar, with a smile.

Then a knock, to which Gerald breathlessly responds. Set in the framework of the doorway stands the weather-beaten figure of Dennis Ladbrook. The rain trickles from his garments and collects in a little pool on the mat. As he confronts Gerald, an intense satisfaction manifests itself in every lineament of his beaming face. 'The telegram, Denny! You've brought it?'

'I hev, Ma'aster Gerald!—a rustic chuckle of delight, then a sudden drooping of the corners of the mouth—'ef un bean't melted!' The sodden cap is removed, and a piece of pulp carefully extracted from its lining. On its appearance, consternation is depicted on every face. Denny glances up from it in dismay, and then regards it with a look of deep contrition. Suddenly his face broadens out into such a beaming smile as only a rustic's is capable of producing; he takes a step forward, and in his enthusiasm brings down a heavy wet hand on Gerald's shoulder. 'Et doan't make much difference, far as I see, Ma'aster Gerald; yeu's a cadet, a cadet in Her Majesty's sarvice, spite o' rain an' weather!' and Denny dwells on his words in a mild ecstasy.

Gerald gives a gasp of relief, and sits down.

'But how do you know, Denny?' asks the Vicar.

'Cause, sir, we overhauls this yere telagraft 'fore we puts it inteu its cover!' replies Denny with modest pride. Fixing his eye on the ceiling, he adds reflectively: 'An' a more flimsy ill-reg'lated cover than it's preuved I never did see, that I will say!'

At Yarrick, telegrams are evidently regarded as the common property of the village. The Vicar appreciates the humorous side of this, but seeing disadvantages, thinks it well to register a protest. 'It is as well that the postmaster should be told that telegrams are private property,' he says mildly; adding with a smile: 'Notwithstanding, that disclosure has in this case certainly brought relief.'

'So yeu's tould us 'fore now, sir; an' hed the telagraft come to any un but Ma'aster Gerald, 'twould 'a been different, sir. "He belongs teu us," says t' poastma'aster; "doan't he?" An' Winn an' me says: "He deu so." "Then we'll read his telagraft," says t' poastma'aster; an' he reads un. Then he says to me: "Denny, doan't

you tell t' parson what I's done!" an' I says: "No, I wun't." But comin' along, I thout 'twould be more honourable like so to deus; an' that's the long an' the short of it, sir.' And Denny twirls his moist headgear with the air of one who has achieved moral triumph.

The Vicar has by this time turned to congratulate Gerald; and as he does so, the door is gently pushed open, and a golden-haired maiden enters, aged seven, blue-eyed. The Vicar catches her up in his arms, and facing round, says: 'Sunbeam, congratulate the conqueror! Gerald has passed his examination, and is become a great man—a soldier!'

Ella eyes the great man coquettishly, and the great man blushes. 'Will you play the drum, soldier?'

'I am afraid not, Ella.'

The interrogator, nestling on papa's shoulder, grows thoughtful. 'Will you wear spurs?'

'Yes; I hope to have that privilege, Ella.'

She looks more content, but still thoughtful; parity of circumstance is causing her to recall a scene from her last Christmas pantomime. After a pause the fair face is upturned, and the eyes seek the ceiling; tragically raising a dimpled hand she says slowly: 'And will you fight for me and my country?'

Gerald is growing a little embarrassed. 'O yes, Ella; that I will, when there is occasion to,' he answers.

'Then I do cong'at'late you, dear soldier!' Both the rosy hands are extended; and the boy, after pausing for a moment, steps forward and chivalrously kisses them.

The Vicar's eyes brighten at the enactment of the little comedy. Gerald crosses to the far side of the room, lights the lamp, and makes endeavour to spread out the paper pulp which was once a telegram.

Ella's eyes now rest in consternation on Denny. 'Oh! Denny, how vewy vewy wet you are; and on the fur mat too!' (Ella was inexact; the fur had long since disappeared.) 'Have you weally come from Boardsey to-night, Denny?'

'Yes, Missy, I hev.'

'And have you, cong'at'l—g'at'lated Gerald, Denny?'

'I's now goin' teu, Missy.' Denny makes preparation by clearing his throat and restlessly glancing over to where Gerald sits. Gerald looks back with a smile; the Vicar leans an arm on the chimney-piece; Sunbeam gazes at Denny in expectation, much impressed by his attitude.

The twirling of the hat is recommenced, the eye becomes fixed on a remote spot, as before, and Denny thus delivers himself: 'In a few days, Ma'aster Gerald, you'll be leavin' Yarrick, an' you think you's goin' away from th'ould place all lonely like; but you an't. Why? 'Cause you's mistaken, Ma'aster Gerald. Mebbe you don't mind the time when you fust come t' Yarrick, an' I larned you rabbitin', an' that ould doe ferret bit yer finger bad; you was a little un then, Ma'aster Gerald.'

'O yes, Denny, I remember it, murmurs Gerald.

'Anyways, I han't forgot those days. I's been turnin' an' turnin' 'em over in my mind o' late; an' yesterday I goes up to Uncle Ben, an' I says to him: "Uncle Ben, did I larn Ma'aster Gerald

rabbitin', or did I not?" "Yeu did so, Dennis," he says. An' I says to him: "Then shall I let Ma'aster Gerald go out soldiering all alone to furrin parts?" An' Uncle Ben says: "Yeu beem right, boy, yeu shanna'!" An' then he an' me goes into the bar-parlour of the *Three Mariners* to see t' sergeant wi' they ribbins who was there. An' we all has a drink together—porter it was; an' then Uncle Ben he ups an' asks t' sergeant whether I could 'list. "Ay, ay," says the sergeant, as he slips a shilling into my hand; so that where yeu goes, Ma'aster Gerald, there I goes teu.' The rotary movement of the cap accelerates; Denny's face has become very red, and his voice quavers like the village flute. 'An' so, Ma'aster Gerald, whether it bes Rooshia, or whether it bes Prooshia, or whether it bes Injy, yeu'll al'ays have me to look arter yeu!'

'Bravely said, Denny!' exclaims the Vicar.

Sunbeam focuses and reflects the distributed enthusiasm; she clasps her dimpled hands together and cries: 'Bwavo! dear Denny; how welly bwave of you!'

And Gerald, with his face aglow, has risen and clasped the honest fellow's hand. 'Denny,' he says, 'I cannot express all I feel.'

The orator is overcome. 'Nor me neither, Ma'aster Gerald!'

The Vicar becomes absorbed in the contemplation of an ornament on the chimney-piece. Suddenly he is recalled to consciousness by a vivid gleam of lightning eclipsing the soft glow of the firelight, and making every object in the room stand out sharply in its dazzling light; it is followed by a deafening peal of thunder, and a gust of wind which shakes the house to its foundations. As though this were a last despairing effort of the elements, a sudden calm falls, the fury of the storm seeming to have exhausted itself.

Ella has buried her face in her father's shoulder.

'Tis as wild a night as Yarrick has seen sin' I's lived here!' comments Denny, awe-stricken.

'The storm is passed away now, Sunbeam,' at length whispers the Vicar.

Sunbeam looks up blinking. 'Are you quite sure it is past, papa?' she says. 'Is it gone to Boardsey, I wonder?'

The group are still together in the Vicar's parlour when a hurried knocking is heard at the door; and in another moment Harry Winn, drenched, breathless, and with the face of one who bears news of sad catastrophe, appears on the scene. 'Thet last hev been teu much for't, sir,' he gasps. 'The belfry's gone by the board, and nary a whole bell's left to tell the tale!' and the rough fellow turns that he may not see the sorrow he feels is writ on the face of him to whom the chimes have been the music of half a lifetime.

And he, the Vicar? Sweet associations of the past had caused those inanimate bells to become to him ministers of divine sympathy, and to him the light seems suddenly to have gone out. He attempts to meet his trouble with a smile, but his face refuses to misrepresent the sorrow of his heart. In a moment Ella steps towards him, and a soft little arm steals round his neck in mute sympathy. Then he turns, catches her up in his arms, and kisses her twice. 'Run, Ella, and tell

nurse to wrap you up,' he says. 'We will go out and see if perchance there be any merely wounded left amongst the slain; if not, we must find a fitting resting-place for them.' He pats the sunny head and smiles down. 'We must bury Angelus and Silvertongue side by side.' And Ella trips away. Turning, he says: 'Go, Winn, and you, Dennis, to where they are fallen—I will join you directly.'

'We will, sir!' the two cry, experiencing instant relief on being put into action.

The Vicar nods cheerfully, and closes the door on them, then draws his chair up to the fire and sits down. His face is thrown back, his hand is passed across his forehead, and his lips move. In this brief moment he takes leave of the loved messengers now lost to him.

Gerald steps forward, and his master asks dreamily: 'Is that you, Gerald?'

'Yes sir.'

Then the Vicar looks up. 'The death of the bells must not banish your success from our minds,' he says. 'You will recollect the coincidence of their fall with the commencement of your new career; it seems that the last sound they uttered was a joy-peal at the news!'

'Sir, Yarrick is poor, and cannot replace them.'

'No, my boy; they are gone for ever.'

Gerald is strangely moved by complex feelings, gratitude for the years of patient care in the past preponderating; he takes a step forward, and his voice shakes as he speaks. 'You refer to my success, sir, and I would tell you how doubly dear it is to me now, and why. Wherever my fortune may lead me and however I may be occupied, I will never, never forget this night!' The boy's face glows with enthusiasm as he continues. 'In distant lands, fighting for my country, I will win rank and fame; and directly I have the means, I will gratify the dearest wish of my heart; and the sounds that you love, sir, shall once more fall upon your ears, to remind you of me!'

And the Vicar listening, is content. He thinks that the loss of the bells has indeed brought ample compensation.

## ANIMALS I HAVE KNOWN AND LOVED.

BY A LADY.

### CONCLUDING PAPER.

I now come to my last notice of animals—Dogs. Before I give an account of those I have known, I will relate a circumstance which took place in the south of England. The facts were well known to my father, who when a young man, resided in Somersetshire. An old couple, man and wife, kept a toll-bar; and their sons were accustomed at certain times to come and take away the money to the neighbouring town. A farmer who lived near was in the habit of passing through the bar when he drove his gig; but when on horseback, he took a shorter way across the fields by a bridle-path. He was generally accompanied by a dog, a very intelligent and powerful mastiff. The old woman kept a small store of gingerbread, nuts, and tobacco-pipes, and often gave the dog a cake, as she was very fond of the animal. One evening the farmer having some business to transact

before he returned home, left his coat in the room of the inn he frequented, telling his dog to remain until he came back. The business being over, while he was putting on his coat he observed three rather evil-looking men sitting drinking; but he gave no particular heed to them, whistled to his dog, and mounting his horse, rode away. Avoiding the road and the toll-bar, he was crossing the last field near home when he missed the dog; but supposing the animal had gone on before, he did not trouble himself. Meanwhile the dog, instead of following his master home, had gone straight on to the toll-bar and scratched at the door. The old woman opened it, and the dog walked in and lay down before the fire. She wondered to see him, as it was getting very late, but presently remembered that the farmer had not passed through that day. She opened the door and tried to send the dog home; but he would not go; so the old man told his wife to let him alone, and when they went up-stairs to bed, the dog followed them and lay down.

Early in the morning they were roused by the breaking of the casement window, and by the voice of a man who, standing on a ladder, opened it, and speaking to the woman, said if she would be quiet and give him all the money that was in the house, he would not hurt her or her husband. He jumped into the room; but no sooner had he done so than the dog sprang at him, seized him by the throat, and held him fast. It was market-day, and as the country-people came, they guessed something was the matter, as the gate was fastened, and no one answered their call. They went to the back of the house, where they saw the ladder. A young man climbed up and looked in, and beheld the poor old couple sitting up in bed, and almost paralysed with fear at the scene which had been enacted on the floor: the man, who was afterwards recognised as one of the three who were together in the inn, lay dead in the grip of the faithful animal. They must have been talking of the intended robbery at the toll-house; the dog must have in some way comprehended, and gone to the rescue.

The first dog of any note that my father possessed was a black Newfoundland. He was a very powerful and intelligent animal. My father trained him well, and taught him to go from our country place to the town with a basket fastened round his neck, with notes inside for the different trades-people, who understood that he would readily give them up, and if required, would bring anything sent, safely back. He was often despatched for a car to an hotel about a mile distant. Hector would go into the yard, and the hostler knew at once what was wanted. One day there was a strange man in the yard, who could not understand what Hector meant; but the dog would not be baffled. He went straight to the bar, and gently barked to gain attention. 'Ah!' said the girl, 'Hector wants a car,' which settled the business.

At that time it was very dangerous to walk

at night in the country roads. It was before the rural police were appointed. When my father was absent of an evening, Hector was always sent to meet him. A spiked collar was put on, to protect his throat. He was told to wait at a certain place, and he never failed to be there. One evening I was walking home with my father; it was so dark we could scarcely see anything. My father said: 'We ought to have met George by this time. I told him to come with the lantern.'

We walked on a few yards, and Hector met us. He was half a mile ahead of his accustomed waiting-place. My father was a strict disciplinarian, and spoke sharply to the dog, scolding him for coming on. But I begged him not to do so, thinking there might be some good reason for his coming. When we reached the stile to cross the fields the dog was restless, and growled savagely.

'Back, Hector, back!' said my father; but the dog would not obey him, and bounded over first. 'There is something the matter,' said my father, as he took out his clasp-knife, and opened it, whispering to me: 'We may have a fight. Be sure you do not lay hold of my arm.' He then struck a light with his flint and steel, whereupon a man sprang up and moved on before us.

'Mind yourself, father,' said I; 'Hector will take care of me.' The dear creature came close to my side and put his nose into my hand. I knew he would fight for us to the death; for though as gentle as a lamb to those he loved, he was fierce as a lion in defence of them. My father was a very powerful and fearless man. He had his daughter to protect, and his spirit was thoroughly roused; but he knew it would be well to trust to the sagacity of the dog, and see what he would do. When we reached the stile he stood still and growled. My father said: 'Come, you fellows, come at once over this stile. I know you are there. Come at once, or I will set my dog upon you, and he will shew you no mercy.'

There was a movement, and one, and then another man came grumbling. Hector stood firm, uttering a low continued growl.

'Come along,' exclaimed my father; 'there are more of you. You had better be quick.'

Another came, saying 'that he had as much right to the road as we had.'

Still the dog would not cross the stile.

'There is another of you. If you do not come at once, my dog will kill you.' He saw the animal's patience was well-nigh exhausted. The last then slunk over, and the dog bounded over the stile into the lane. Then we knew the brave creature had saved us. When we came to the public-house, George, our man-servant, was sitting comfortably in the porch waiting for us with the lantern. He had seen *two* men, and was afraid to come on!

I could tell many interesting stories of this noble animal. His end was sad. When we were removing to another house, he was taken to protect some of the things that were put in the loft above the stable; the stupid man who put him there tied him up; the poor creature's feet had slipped, and when the door was opened next morning, our faithful friend was found strangled.

We had at the same time with Hector my

Blenheim spaniel Flora, the one who rescued the kittens from the pond. She was a lovely little creature, perfect in beauty; and was very fond of Hector, whom she delighted to patronise. He was roaming about the fields one day, when espying Flora in the pond he jumped in, and took her safely to the bank. This liberty the spaniel resented by barking and scolding, after which she leaped into the water again. Hector looked very humble; but still he seemed to think he must be there, lest any harm should come. A happy thought occurred to him, and walking into the water, he quietly waited till Flora climbed upon his back, and enjoyed herself, while he swam about. When she was tired, she walked quietly home. But after this, it was a constant source of amusement to let Hector loose with Flora upon his back in the water.

We had also two terriers—one a black and tan smooth-haired; the other a wire-haired, one of the bravest, most honest dogs I ever knew. The smooth-haired was called Tan. He was a thorough aristocrat, proud and haughty; very good and clever in a rat-hunt when excited and others were working too. But he was a perfect contrast to honest-hearted Tip. Near our house was a farm occupied by a strange sort of man, low, vulgar, and savage. This Farmer Oldacre had a dog the counterpart of himself, that was the terror of the neighbourhood. One day he was loose, and by some means he got hold of poor Tip and almost killed him. We saw him torn and bleeding in the yard. Everything that could be done for the poor animal was done. It was a pretty sight to see little Flora sitting by the side of and comforting her injured friend; and many a delicious morsel was given to her to take to her patient. In about six weeks Tip was better and able to run about. One day our man-servant, who had been to a distance to fetch some hay, informed us on his return that he had seen Tan on the road, and that on whistling, Tan took no notice of him. In the afternoon, we suddenly heard a noise of barking dogs. Off started Flora, and joined them. There had assembled about twenty of all sorts, who proceeded to Farmer Oldacre's, flew at his dog, and tore it to pieces. Our man-servant, who followed them for Flora's sake, told us she in her revenge was the last to be taken off from him, while Tip sat looking quietly on, taking no share in the attack. Must not those animals have communicated with each other, and thus punished with death the savage brute? These dogs had been collected together from a radius of five miles, and it was quite evident that information regarding the farmer's savage dog had something to do in gathering them together.

Tip was one of the most faithful animals. He devoted himself to our old gardener Willy. At haymaking-time he was employed to take charge of the basket of food and the beer that were sent into the field for the labourers. No one but Willy was allowed to come near while the animal guarded Willy's coat. His faithfulness, however, cost him his life. One evening in October a sudden sharp frost set in while Willy had left Tip in charge of his coat in the garden. The old man had been persuaded to go to the public-house, and was so intoxicated that he could not return home; but the dog remained still faithful to his charge; My father went to the dog to try to get him home;

but he would not come. He covered him up with a thick horse-cloth; but next morning poor Tip could not walk. He was almost paralysed; and was in such agony that they were compelled to have him shot.

Flora was so clever that I professed to teach her the multiplication table. I used small biscuits; and without any mistake she would answer my questions by pushing the right number of biscuits with her paw. Of course I never tried high numbers; and as a reward at the end of her lesson I used to say: 'Now, Flora, we will play at subtraction.' She would put her pretty head on one side, and—if there were, say, four biscuits upon the table—I would ask: 'Now, Flora; four from four, how many?' In a moment all the biscuits disappeared. Whereupon she would give a happy little bark, and run away well pleased with her performance. She was devotedly attached to my father, and in a severe illness he had would never leave him except to take a short run in the garden. One day she was taken from his room into another where the servant did not observe that the window was open. She had become so susceptible to cold from her long confinement in a warm room, that she caught a severe chill, which ended in rapid consumption.

I will now conclude with an account of Juno, the most singular dog I ever knew. When we were in Staffordshire, some years since, a female puppy was given to one of my daughters. She was a month old when we brought her home. She was partly of the hound and Lyne Hall mastiff breed, and developed into an animal of rare beauty. Her colour was a light golden brown, with jet-black muzzle, and a little white upon her throat. Her eyes were large and lustrous, resembling a fawn's. Hydrophobia being very prevalent in our neighbourhood, we were afraid of her coming in contact with any other dogs; and as she grew up, the fear of losing her compelled us to be very careful, so that she never went out without a leash. When she came to us, we had a kitten, to which she attached herself; and they were constant companions until the little creature was accidentally killed. Some time after this she saw a cat, and ran up to play with it. But puss flew at Juno and scratched her severely on the ear. She never forgot this; waited her opportunity, and killed it. From that time all cats were doomed that she could lay hold of; and our back-yard, which had been much infested by them, was kept clear of their presence for years.

Juno soon became so completely identified with us, that she did not care to associate with any other dogs. She was a most affectionate and loving creature to us all, and also formed strong attachments to various friends.

She was remarkable as a watch-dog; indeed she became quite 'a terror to evil-doers.' We felt quite secure from burglars, though the houses of many in our neighbourhood were attacked. She never barked unnecessarily. When the gate was left open for the early-morning men to empty the ash-pit, it was quite sufficient to tell her so before retiring for the night, and then she never uttered a sound. Her sense of smell was so keen that it was impossible to administer any medicine to her. Once only was this done, and it required such severe measures that those who witnessed the

scene in the yard of the veterinary surgeon have never forgotten it. One summer she was very unwell, suffering from an eruption of the skin—we supposed from a fight she had had with a cat. It occurred to me that ripe pears would do her good. She ate them with a thorough relish; and in the course of three weeks she was completely cured!

Her love for me was very great, though it was to her master she evinced the deepest devotion. When he was absent from home, she would eagerly watch for the postman, and fetch to me her master's letter, without touching any other. I had a severe illness, and while confined to the house she was my constant companion. One day I was very depressed, and had been weeping. She came to me, looked into my face, whined, patted me with her paw, and licked my hand. Seeing this had no effect in drying my tears, she snatched my handkerchief, and ran away with it to the other end of the room. When she saw me smiling, she came slowly back again, and after a little coaxing, returned it to me. Though so brave and fearless, she was highly nervous, and suffered dreadfully in a thunderstorm. If I were near her, she would hide her head in the folds of my dress. When alarmed, her face perceptibly paled. We saw a remarkable instance of this one day when my husband returned from a funeral. Juno hearing his voice, as usual ran to meet him; but started back as if in horror when she saw him with a long black silk hat-band, and a scarf of the same material across his shoulders. Her colour left her, and it was some minutes before she recovered.

It has often been to me a matter of inquiry how much of reasoning power as distinguished from instinct is to be found in animals. The more I have studied them, and watched their various ways and acts, the more I am convinced that they are not so far in this respect removed from man as some would have us believe. Their sense of humour is great, and we all saw this frequently in Juno.

But it is useless on my part to attempt to give a true description of what she really was. Dear creature, she is gone. A sad blank is left in our home, which no other can ever fill! I like in memory to look back upon 'Animals that I have known and loved,' convinced that to a great degree they are endowed with the same faculties as ourselves; the same passions that influence us are shared by them—love, hope, joy, courage, fear, and jealousy; and above all, they possess devotion and constancy. Deceit and treachery have no part in the character of a true and faithful dog. He shews no distrust, no wavering in friendship, no faithlessness in love. The love of a friend may grow cold; children may be alienated from parents, and parents from children; even between husband and wife who have been fond and confiding, 'whispering tongues' may come, and cause severance and bitter sorrow. But make a noble dog your friend, and nothing can break the bond which unites him to his benefactor. Should we not then seek to promote the welfare and happiness of all animals? We know that God has made nothing in vain. He has clothed the earth with beauty, and given to us these wonderful companions, endowed with fidelity and affection. Let us see that we use these gifts

aright, remembering our Saviour's words, that not even a sparrow can fall to the ground without the knowledge and care of our Heavenly Father.

### A RUSSIAN ICE-HOUSE.

WE have received the following description of an ice-house from a gentleman resident in Moscow: he says:

The pleasure-seekers of Moscow have this year been gratified by a spectacle which, for novelty at least, has not been surpassed by anything they have witnessed for a long time. This spectacle is a house built entirely of ice. It is a copy of the one the Empress Anna Ivanovna constructed in St Petersburg on the river Neva, and the plans and description of which are kept in the archives of Moscow. From these papers, the enterprising managers of the Zoological Gardens here have obtained the details necessary for constructing a miniature copy of the imperial ice-palace. The cost of erection has amounted to three thousand roubles, or at the present rate of exchange, a little above three hundred pounds sterling; but this has already been more than covered, as the first six days of the exhibition brought in something like eight thousand roubles. The appearance of this structure is most attractive in the evening, when lit up with electric and Bengal lights. It is built on the pond of the Zoological Gardens, and occupies about fifty feet square, including the space inclosed by the ice-railing. Entrance inside is prohibited, owing, no doubt, in great measure to the damage the steps would suffer from the visitors continually passing up and down. The house itself is about twelve feet high, with a roof some nine feet higher. It is built in the form of a parallelogram; and with all due respect to the Empress Anna and to the authorities of the Gardens, reminds one more of a barn than anything else. This, however, is only an accident of shape. Looking at it when illuminated by electricity, the sight is one well worth seeing. The ice in front is of the purest, and glitters with almost dazzling brightness, and where a corner catches the light, the onlooker might imagine that it was set with precious stones. One end of the house is built of alternate pieces of dark and clear ice—a combination which, whether brought about intentionally or not, produces a very good effect, and irresistibly reminds one of a chess-board. Both at the front and back, there is a doorway in the centre of the house, and on each side three windows. Round each of these is a cornice, and between the windows plain flat columns without any capitals. These, with a large shallow shell over the doorway and a balustrade running along the edge of the roof, are the only attempts at decorating the building itself. About half-a-dozen steps lead up to the doorway in front. At the foot of these, on blocks of ice, repose two dolphins, one on each side; they in their turn are flanked each by a mortar, and at each extremity are two cannon—all of ice. To complete the building, two chimneys grace the roof. In front of the house and a little to the side are two ice-lodges, in the form of square towers. The execution of the work is worthy of all praise. The preparation of the window-panes,

made to resemble plate-glass, is said to have given some trouble, as it was first necessary to get blocks of ice of a suitable size, and then, by means of hot-irons, to reduce them to the proper thickness—about a quarter of an inch. They have the appearance of frosted glass. The preparation of the other parts, though easier, has required great care; the bestowal of which, however, has been repaid to those on whom fell the responsibility of the work, by the consciousness of having performed their task well, and by the general pleasure afforded to the public. On Saturday the 14th of February the Prince of Bulgaria, Alexander I., visited the Gardens to inspect the ice-house.

Perhaps some who read this may feel inclined to make a similar experiment on a small scale. How far it is practicable in Scotland or England, is another question; but I may mention another icy production which it would be worth trying to make—pictures in ice. Take a block of ice, smooth the surface, and paint some scene on it. The paint will soon dry; and then water should be poured over it until the block is some inches thicker. A friend of mine a short time ago saw a specimen of this, and declares the effect was very good. He at first thought the picture was on the outside; and it was only after examining it more closely that he found out his mistake.

### THE ELVES.

With the noiseless beat of fairy feet,  
Merrily race, without a trace,  
The fays athwart the green;  
While overhead the moon rose-red,  
Showers the light of noonlike night  
The charmed boughs between.

The bird may sleep in slumber deep  
Upon its spray when fairies play,  
Nor wake before the dawn,  
For Zephyrs' sigh were tempest high  
Amid the trance of elfish dance  
Across the moonlit lawn.

Now in and out the joyous rout  
Their mazes weave at shut of eve,  
When pipes the nightingale;  
Or hollow note from the owl's pied throat  
May music be for their wild glee,  
When softer tunings fail.

Their drink the dew, a merry crew!  
From acorn cup they drink it up,  
And wild with that draught made,  
They dance amain till all are fain  
Their play to close, in soft repose,  
On beds of clover laid.

But Chanticleer, the morn now near,  
Preludes the song of feathered throng  
Through all the country side:  
Away they go!—like falling snow  
Upon a stream, or winged dream,  
They vanish unespied.

## NERVOUS DEPRESSION.

Nor many of the present generation belong to that fortunate class who boast that they were 'born before nerves were invented.' On the contrary, there is in these days a very general acquaintance with their power, and sometimes a very distressing familiarity with the suffering they can inflict. The favoured few who know little or nothing about them, find it hard to believe how real and how severe this suffering often is. If a man breaks his leg or has a fever, they can understand that there is something the matter with him; but if his complaint is 'on the nerves,' they sometimes rather hastily conclude that it is altogether a trivial matter, and perhaps exists entirely in the sufferer's imagination. This has often led to the infliction of great cruelty, in aggravating, by contemptuous and unjust censure, what was already sufficiently hard to bear. No doubt there may be spurious forms of this disorder, as of some others. Fine ladies may have 'the vapours' for want of an occupation; but this in no way proves that nervous depression in general is fancied and fictitious. It is as real a complaint as consumption or scarlet fever, and as little to be trifled with.

Strange details of nervous impressions could be given by sufferers, and those who have received their confidences. A lady assured us that she at one time used constantly to hurry past a high wall or building, lest it should fall upon her. Another, that she would stand trembling with her hand upon her schoolroom door, summoning all her resolution to sustain her in the effort to go in to give her pupils their ordinary lessons. And the prospect of a journey, even though short, has been most formidable, indeed terrible, to persons in this condition. Apprehensions of all kinds are common symptoms, from groundless alarms of robbers in the night to forebodings of every possible disaster to body or mind. And these are sometimes accompanied by sensations or affections which are merely physical, such as giddiness, nausea, trembling, or palpitation. The

victims constantly complain that life is a burden. Now the first thing for nervous sufferers to do is to accept two facts—first, that their complaint is curable, and second, that the chief part of the cure rests with themselves. If they 'give way' and 'give up,' they may go from bad to worse. If they will strive resolutely and take proper means, they may live to smile at their past troubles.

First of all, there is very often an undue strain upon the system, which ought to be lightened. We speak now of workers, and specially of brain-workers. The human machine is like a clock; it requires weights to keep it going. But in these days the weights are often too large and heavy, and strain the machinery. In cases of nervous depression, they may need to be reduced by perhaps a tour or a short trip, according to circumstances; a sea-breeze, a blow of mountain-air, a glimpse at the Rhine and Switzerland, and back again to moderate work. If the occupation followed be unhealthy or too exciting, a change of pursuit may be imperative. But to release the sufferer from all duties would be a cruel kindness; idleness is a very hotbed for morbid growths of every kind. Residence too is a point not to be lost sight of; a low-lying damp locality is of course unfavourable. So is one with very gloomy surroundings or associations.

The spring is often a trying season to those who are not strong, and especially to sufferers from nervous depression: they find their painful sensations strangely aggravated without any apparent cause, and are sometimes ready to conclude the worst. It is well for them at such times to remember the old saw, 'Frightened is half-killed,' and to reassure themselves by the simple fact that they are but feeling acutely what others also feel, though in a lesser degree.

An unhealthy or too sedentary occupation contributes to nervous depression; and if it cannot be exchanged for a better, should be varied and relieved as far as possible. There is constantly, indeed usually, some weakness of digestion, requiring care in the diet, for dyspepsia is often almost

the sole origin if not the whole of the complaint. The use of a suitable tonic is generally desirable: often a very simple one is preferable—quinine and iron, or some such mild aids to appetite and assimilation. Some medical men prefer pepsine and similar preparations; others use strychnia, phosphorus, zinc, and various formidable drugs. Only, whatever medicine is used, let it be prescribed by a qualified practitioner, and the ablest you know. Above all, no quacks. Fresh air, cold water, and plenty of exercise, will do the nervously depressed more good than physic. The exercise, however, should not be violent; and the cold-water treatment should be moderate and rational: plunges and other shocks are most undesirable. Sponging and brisk washing and rubbing are in every way helpful. The improved, gentler system of hydropathic treatment is well suited for really nervous patients. But, as he hopes for recovery, let the nervous sufferer avoid resorting to alcoholic stimulants for relief: these are certain to retard his cure, and very likely to entangle him in dangerous habits. The momentary elation, followed as it commonly is by the certain and often severe reaction, is among the worst things possible for an enfeebled nervous system. If any one suffering in this way cannot entirely dispense with stimulants, let him or her be assured that the daily allowance had far better be diminished than increased. In proportion as the patient depends upon stimulants for support, will the process of recovery be longer and more difficult. And the same remark is perhaps equally applicable to opiates and sedatives. To meddle with these is to play with edge-tools. Whatever temporary gain there may be in their use, is too often counterbalanced, and far more than counterbalanced by the subsequent reaction and prostration—the very things which of all others nervous patients are most concerned to avoid.

And now we come back to a truth which we scarcely expect such sufferers to accept readily, but which is nevertheless beyond question—the chief part of the cure lies with the patient. Not all, but by far the most important, and the hardest. Change, exercise, fresh air, diet, tonic—all these together will not cure any one who gives up and gives way. The aim of the patient must be to disregard and even defy his sensations, impressions, languor, or whatever form his sufferings may take, and just go on as usual, doing all he can to forget self. Nervous people often rally wonderfully under pleasant excitement, sometimes even under sudden trial. They surprise their friends by their activity and endurance, and accomplish the otherwise impossible. Let us illustrate our meaning in one or two particulars. Suppose a patient so severely depressed that he can hardly be persuaded to move; he must begin—he must try. Let him summon all his energy and self-command; let him walk round his garden, or fifty yards on the road to-day, and return satisfied that he can at least do so much. The next day let him go farther—twice round or more, a hundred yards along the road, and so on; daily increasing his self-appointed task, and daily proving to himself that he really can do what he once thought or feared he could not do. The same principle applies to other efforts, according to the form of the malady. Persevere in resolute resistance to the difficulty,

whatever it may be; and use each victory, or degree of victory, as a step towards further advances. No brooding over troubles and watching for symptoms. Giving up is fatal; resolution and hope gain the victory, with the help of Providence. And even as to fears, forebodings, and so forth, the same direction, in substance, will apply. A lady told the writer that after a period of acute suffering from various apprehensions, she one day said to herself: 'Now I have long been fearing all sorts of things, and they do not come; I have had all manner of distress, and dreaded what has never yet happened. Nothing that I have been so alarmed about has really occurred. I will allow these tormenting fears no longer.' And she resolutely dismissed her apprehensions. Like the thinker who

Fought his doubts, and gathered strength,

she strove against, and in time overcame her gloomy and groundless forebodings, and now lives to encourage others, to preach hope and cheerfulness and trust. To tell a nervous sufferer that there is nothing whatever the matter with him, is most cruel, and far from true. To tell him that he must be his own best doctor, and that much of his cure lies in his own hands, is the simple truth, and ought not to be at all discouraging, but rather the reverse.

Not a few of the habits of modern life strain the nervous system considerably; hurry and excitement are far too prevalent. 'Taking things coolly' should be at least endeavoured by those who may have much in their work calculated to stimulate the mind or the feelings. Excess of any kind is constantly the parent of nervous depression. So too are exciting amusements, such as gambling. Too much novel-reading is an unsuspected but often very powerful contributing cause. Overwork, alas! is one which it is not so easy to remedy as to denounce.

Little to earn and many to keep,

often strains the nerves and brain too heavily. What is sometimes ridiculed as 'a hobby' is of the greatest use to hard-worked men: music, gardening, a lathe, even rabbits or canaries will serve the purpose. The hobby should be readily accessible, and for most people inexpensive; but it should involve an entire change of thought and occupation, and be as little connected as possible with the individual's ordinary business or pursuit. A good hobby is often a wonderful relief to the over-taxed mind. Too little exercise and too much tea ruin the nerves of many a woman. Men often try theirs by indulging too freely in the use of tobacco. Young men and, above all, growing lads are very unwise if they employ tobacco at all. Their elders have more excuse; but the vigour of youth cannot require it, and certainly will not profit by it. The diabolical cruelty of frightening young children is almost certain to sow the seeds of nervous weakness; so does harsh treatment in later childhood. And over-driving and harassing young lads and girls, whether at books or work, all tends in the same direction. Competitive examinations have to answer for some cases of enfeebled nerves.

Simple habits, moderation in all things, cheerful amusements or pastimes, and reasonable care, will go far to prevent nervousness. But when,

through ignorance, indiscretion, hereditary tendency, or affliction, it has been developed, the sufferer will do well to give all heed to the foregoing hints, and to take for his motto—Hope on, hope ever.

## A LIFE'S ATONEMENT.

## CHAPTER XIV.—HISTORY.

*You do not need the sanctities of love to hold you pure in heart, as I do.*

FRANK'S picture occupies the place of honour on the walls of the Winter Exhibition of the Associated Brotherhood of British Artists. A clique of Frank's friends and admirers go about town proclaiming the advent of a new Turner; whilst a clique of his detractors go about town proclaiming Frank an impostor, and his picture a pretentious failure. In my capacity as story-teller I have a right to a voice in this matter; and I may take leave to say that the picture is a good picture, and is very near being a great one, and that only a man of genius could have painted it. The World of Fashion, interesting itself in the affairs of British Art, is divided into hostile camps upon this question; and Frank becomes a Lion, roaring mildly in many drawing-rooms; and being growled at in many others, by lesser Lions envious of his fortune. In this mixed world there are many artists who are not gentlemen, just as there are many gentlemen who are not artists. It is not surprising, therefore, since envy is a human passion, that some few should go about to accentuate the young fellow's triumph by sneering at him as one who paints with ease to shew his breeding. Frank is not without a sense of humour; and since he never envied mortal man anything, and envy cannot sting him, he takes the detraction good-humouredly, and the worship with more inward humility than might be believed.

It is a matter to be thankful for that in this world the best truths are the tritest. We have reason to be thankful that sin brings punishment in its train. If punishment hang fire or miss, it will be the worse for us. If I sin, let retribution lay a hand upon me, that I may thereafter live cleanly and learn wisdom. But let it be that the wisdom shall be early learned, for that man's lot in life is terrible from whom sorrow slips like water, and who, so, needs to be drowned in it before his heart is cleansed. I have laboured but in vain to paint this man if I have not shewn already that with him remorse is the gate which leads to folly, as surely as folly is the gate which leads to remorse, and that for him there must be something little less than a convulsion of the universe before he escapes that demon's circle. Since the night when last we saw him, remorse has been busy with him, and he has made a strenuous effort against himself, and has for the most part succeeded in keeping out of harm's way. It is a good sign in him that praise humiliates him inwardly. Most of all he is humbled by Maud's innocent triumph and gratulation, conveyed by the liveried Cupid of the penny-post, and breathing completest faith and love. He wears the locket which holds her portrait at his heart, and believes in it as a talisman, to save him from all wrong. And now he has been for so long a time upon the straight path, that but for his last folly he would be quite happy and contented.

On the evening of the first day of the Exhibition he had met the Secretary, a sad-eyed and mournful-mannered man, who was conspicuous as wearing the most shockingly bad hat in London. 'Let me congratulate you, Fairholt,' said the Secretary, speaking as dolefully as though he were bidding farewell before transportation. 'Lord Chesterwood wants your picture, and will give your price for it. I met him an hour after the place had closed.'

'I'm glad to know that Chesterwood likes it well enough to buy it; but I am sorry that I was stupid enough to forget to inform you that it is sold already. It was sold before the Exhibition opened.'

'You're a lucky fellow, Fairholt,' said the Secretary. 'I'll tell his lordship. Would you take a commission for a replica?'

'Not a replica,' Frank answered. 'A new work, if you like—and if Chesterwood care for one.'

With that they parted; and Frank strolling homewards, began to think that he had acted foolishly. Tasker's bill for ninety-eight pounds ten shillings was due in three days' time, and he had nothing in hand to meet it with.

'I must look Hastings up,' he said to himself; 'and either assure myself that his man is certain, or go back to the Secretary and accept Chesterwood's offer at once.'

He called a hansom, and drove to Hastings' rooms. 'I say,' he cried, bursting in suddenly—'about that fellow who was to buy my picture?'

'What about him?' answered Hastings, turning languidly on his couch. 'Is he gathered to his fathers? Has he gone a cropper on 'Change?'

'I have come to you,' said Frank, speaking seriously, 'to ask you about him. It is a matter of vital importance, Hastings. That bill of Tasker's is due in three days. I have just had an offer for the picture from Lord Chesterwood; and if I am not absolutely sure of your man, I must accept it. Now, is your man safe to buy the picture, and safe to pay at once?'

'I should say,' responded Hastings with great gravity, 'that so far as the possession of coin goes, the Bank of England is a fool to him. And I should be inclined to fancy that if he lost the chance of buying that particular picture, this hollow world could provide him with no future joy. That indeed is my deliberate conviction.'

'Will you tell me who it is?' Frank asked.

'An oath, an oath!' said Hastings with placid languor. 'Shall I lay perjury upon my soul? No; not for Venice!'

'Will you undertake to see the man to-morrow,' Frank urged, 'and ascertain if everything is right, and if his will to buy the picture holds good?'

'Before the morning dew has pleached the lawn,' said Hastings.

'You unpatented Irritator,' cried Frank, shaking him. 'Will you go?'

'Yes; I will,' said the Irritator. 'If not so swift as friendship's heart could hope, as fast as a four-wheeler can carry me.'

'When will you let me know?'

'Before the clock hath struck the hour of noon.'

'That's a promise?'

'And shall be a performance.'

The two shook hands; and Frank regaining his

cab, drove home to dress, and then drove westward to be lionised.

At an hour much earlier than that at which he usually arose, Hastings took his way to Acre Buildings, City, and was admitted to the presence of Mr Tasker, who received him with much cordiality. 'I have called,' said Hastings, business-like for once, 'to ask you about that picture of Fairholt's. I know very well that you have a grudge against him, my chosen one; but you mustn't gratify it yet. With a bill against Fairholt in one hand, and a cheque in his favour in the other, you might be inclined to be mischievous. Have you a genuine commission to buy the picture?'

For a second, Tasker felt as though his ground were slipping from beneath him. The usurer needed time to think a little. There could be no harm in letting Hastings see the intending purchaser's name. He made no answer, but rummaged over a file which he took from an iron safe, and having found the letter for which he sought, handed it over to Hastings. The letter was dated from Hartley Hall, and was signed by Benjamin Hartley. It set forth that since the writer designed a surprise for the artist, it was his wish that the purchaser's name should be kept completely in the dark, and it authorised Tasker to offer four hundred guineas for the picture. Whilst Hastings read this over, Tasker produced a copying-book from the press, and laid before him a copy of his own reply to his patron's missive. Hastings read that also, and professed himself satisfied.

'You won't break your bond with me, Mr Hastings?' said Tasker when he had put away the letters.

'A scrupulous adherence to veracity is my sole virtue,' Mr Hastings responded, with a return to his common manner.

'Yes, I know,' said Tasker, to whom that sentiment might as well have been set forth in Greek; 'but you will keep your promise?'

'Have I not told thee so, thou Hebrew Jew?' said Hastings, seating himself upon the edge of the table.

'Very well—very well,' returned Tasker, waving his hands in a manner half-deprecatory, half-submissive. 'You say what you like to me; but I will prove that I am your friend. There is drouble in store for you, Mr Hastings.'

'Your argument is cogent, my Israelite,' said Hastings. 'Experience has taught me to trace the filmy nexus which is here revealed. It's a singular thing, Tasker, that I never *had* a friend who didn't say that trouble *was* in store for me. Your advancement of that statement is at once admitted as an admirable augury of the most friendly intentions. I invite you to notice that that sentence is rather well turned than otherwise.'

'You are going to be in great drouble,' said Tasker gravely, 'unless we both take great care of you.'

'Then let the stricken deer go weep,' quoth Hastings, and lit a cigar.

'Mr Hastings,' said Tasker below his breath, 'I have been in a great difficulties, and I have had to sell every acceptance that was in my hands.'

'Good,' said the other with an air of approval.

'I have been compelled to sell yours with the

others. And the gentleman was here yesterday to say that he meant to go for you. Now, Mr Hastings, this is not my fault. I am a money-lender; but I am not a scoundrel.'

'A nice distinction,' Hastings murmured, as if to himself.

'I break my faith by giving you warning. But if you do not wish to be in trouble, you had better be out of the way for a little while. I can only advise you; but I could not help it. I was obliged to sell.'

Hastings made no response to Tasker's advice or to his professions of sorrow, but surveyed him with quiet indifference, as though the matter in discussion had no possible concern for him.

'What do you think you shall do?' Tasker asked after a pause.

'I think I shall clear out somewhere, and I think I shall ask you to let me have the money to do it with.'

'I cannot let you have much,' said Tasker; 'but I must do my best.'

Then the two set to work to settle the amount on which Hastings should start for Boulogne, since to that refuge for the oppressed he chose for the moment to fly. It was settled that Tasker should send a weekly remittance so long as he should adjudge it necessary for Hastings to remain abroad, and by way of a beginning that gentleman drew twenty pounds, and made his way merrily to Fairholt's chambers.

'All goes well,' he told Frank. 'I have seen the agent, and I have read the letter of the principal. I suppose you will get your cheque to-morrow or next day.'

'For once intelligible and direct,' cried the artist, clapping him on the shoulder.

'Yes,' said Hastings; 'it's all square, old man, and you may rely upon it.'

'Better and better!' cried Frank, laughing. 'What has worked this conversational conversion?'

'Should you hold the Koh-i-noor—the Fountain of Light itself,' said Hastings with solemnity, 'above the flame of a farthing rushlight, its sparkle would be lost. Rub it even with a damp sponge, and its brilliance partially returns. In this little allegory, I appear as the Fountain of Light, you as the damp sponge, and a city agent as the farthing candle. Adieu!'

Hastings went his way; and Frank, easy and satisfied in mind, sat down and penned to Maud the last letter he ever wrote to her. He set down all his hopes and all his love in that letter, not guessing that it was love's last legacy to love. How should he guess it? I cannot tell but before this ink is dry some stroke of terror may have fallen on me. Nor can you who sit at ease beside your fire and read this story make the baldest guess at what the next sixty seconds may do for you. But the proverb is something musty.

'If I were not sure,' Frank wrote, 'that you love me as truly as I love you, I should despair of telling you one thousandth part of what you are to me. And as it is, I shall never tell you all. You do not need the sanctities of love to hold you pure in heart, as I do. Though you loved me as woman never loved man before, you can have no such need of me as I have of you. I shall never have courage to tell you of the follies from which

you raised me ; of the things, worse than follies, from which your love has had power to save me. And I believe, dearest, that if it be possible that by any swift temptation—as God knows, it is possible for most men—I should fall from your good hopes of me, the thought that you had loved me once would draw me back again to penitence and honour. Forgive me if I vex you by throwing even a hint of possible mud upon your idol. If that idol were any other human creature, you should believe in him in peace for me ; but you can scarcely guess, Maud, how humble and how undeserving I feel before you. I can bring you nothing that makes me worth your having except my love. But I bring that in full measure, pressed down and running over. I am all yours now, and till I die.' This and more he wrote in true love and penitence and out of the fullness of his heart. There were manlier purposes within him then, than he had ever known before.

At lovers' perjuries, Jove laughs. Ay, well ! But if Jove laugh at the vows by which love pledges itself to truth and honour for love's holy sake, or at their woful breaking, then let the meanest creature of the fields deride his thunder. I, for one, will have no such Jove astride on my Olympus.

Frank having despatched his letter, rested with good heart and hope, purposing to make the discharge of Tasker's bill his last business in town. He had no anxieties about that matter. The date for the arrival of the cheque and that for the payment of the bill ran each other a little close, to be sure ; but then there was the time-honoured three days' grace, and he had Hastings' full assurance of the *bona fides* of the unknown purchaser. But the day of reckoning came and went, and no cheque reached him. He went to look for Hastings, and found that he had left town and had given no address. Then, sorely against the grain, he went to visit Tasker. The money-lender lay in wait for him.

'I must ask you,' said Frank, 'to renew that bill for a month.'

Tasker regretted politely that it was not possible. He was already almost a ruined man—he had not twenty pounds in the world. He set forth these statements with more sorrow for Mr Vairhold than for himself. He would have liked to have helped the gentleman.

'This is all nonsense, of course,' said Frank. 'I suppose you want a heavier interest. How much do you want ?'

No ; Tasker wanted nothing but his money. He was broken—he was ruined. There was nothing before him but the workhouse.

'Make the bill a hundred and twenty-five, and make it payable in a month ?' Frank asked.

No ; it was not possible. Tasker actually turned his back upon him, and sorted a set of dusty papers.

'Make it a hundred and fifty, payable in a month,' Frank urged.

Then Tasker turned, with insolent triumph peering through humility. Was the gentleman deaf ? It had been said already that the thing was impossible. Tasker wanted his money, and nothing but his money. He was bankrupt without it, and he must have it.

'I am in hourly expectation of more than four hundred pounds,' Frank pleaded.

Tasker trusted it would arrive in time to prevent any unpleasantness, holding meanwhile in his hand the pocket-book which held Benjamin Hartley's cheque in favour of Frank Fairholt for four hundred guineas. It would not be easy to say how much Mr Tasker enjoyed this stroke of vengeance.

'What shall you do if the bill is allowed to be finally dishonoured ?' Frank asked him.

Tasker—with the joy of gratified malice brightening his eyes and creasing his lips into their own carnivorous smile, in spite of all he could do to clothe his face in proper sadness—regretted deeply that he could only get some wealthy friend to take it up and appeal to Frank's family.

'If you can get any one to take it up, bring him to me, and I will pay him any reasonable sum he may ask to renew it.'

Then Tasker landed his final blow. 'I have told you already, Mr Vairhold, that I am almost a ruined man. Well now you shall know. I am quite ruined. I cannot help it. I have sold your bill into other hands. It is not in my hands any longer ; I have nothing more with it.'

Frank regarded him for a minute sternly and thoughtfully. 'You want your revenge for the insult I put upon you last summer,' he said quietly, but with a feeling of hopeless desperation. 'Is that it ?'

'Look you, Mr Vairhold,' said Tasker, laying his hand on Frank's sleeve, 'if I could'—

'Stand back, if you please,' said Frank quietly, regarding the smile which now shone unrestrained on Tasker's face.

'If I could pay myself,' Tasker began again, retiring a little, 'for the money I have lent, I should not care about revenge. But I will have one or the other. If my friend comes to me and says: "You have sold me a rotten bill, and told me it was a good one," then I will not share you—no, not a minute. Look you, my young friend'—Tasker laid a hand on Frank's arm again.

The words, the smile, the touch roused Frank into the feeling of disgusted rage one feels at an intruding snake, and in his instinctive passion he struck the Jew across the face with the cane he carried in his hand.

Tasker sprang back with a yell which brought in the office-boy. 'Fetch a policeman !' screamed Tasker with a face livid with rage, except for the red bar across his cheek. Frank sat down with blind passion surging in his heart. Tasker placed his back against the door and glared at Frank, who took up a newspaper from the table and made a feint of reading it. In a minute or two the boy returned with an officer, who listened with imperturbable official calm to Tasker's statement, and then turned to Frank.

'I have punished this person for a gross impertinence,' said that young gentleman with quiet hauteur. 'There is my card, officer. I shall be quite ready to appear at the proper time and place.'

'Very good, sir,' said the officer.

'Take him in charge !' Tasker screamed—'take him in charge !'

'You have my address,' Frank said quietly to the policeman.

'You'd better summons the gentleman,' said the officer to Tasker.

'No!' Tasker screamed; 'he shall go to prison.'

The official smiled; and Frank walked unmolested from the room and into the street.

Tasker threatened to report the officer for refusing to do his duty. The officer, with sublime calm, asked if Tasker had the gentleman's address. Yes; he had. Very well then; so had the officer. And with that the officer also walked down-stairs and into the street. Tasker raged alone, and swore to a thousand horrible revenges. But when his mood cooled a little, he rejoiced savagely that Frank had given him thus a further chance for revenge. He could guess pretty well what it would be to Frank to have his name dragged first through the mud of a trial for assault, on a police-court summons, and next through the daily columns of the press. He ground his teeth and clenched his hands in savage exultation over that charming prospect. With a passion of rejoicing hatred, he took from his pocket-book the cheque for four hundred guineas, and gloated over it.

That Frank should regret the violence into which the passion of the moment had betrayed him, was inevitable; but his regret brought but little added pain to him. Now that he knew how inexorable Tasker had meant to be from the first, he saw that with or without the blow his case was hopeless so far as the money-lender's influence could go. He was torn with suspense and anguish. The trouble of this unhappy bill magnified itself until it assumed gigantic proportions. Unless it could be met, his father and his brother would each see how he had gone back from his better promises. Maud too—might it not reach her ears? There was an almost unbearable horror in the thought. He had promised so much—he had meant so well—he had fought so hard against the temptations which beset him, and now, a single night of folly had brought him to this. How could he have been such an insensate fool as to place himself in this man's clutches after having purposely insulted him. O fool! he groaned. Money borrowed drunkenly to pay a gambling debt. A debt contracted too in such a place and with such people. Could he go down and see Will, and make a clean breast of it, and beg him once more to help him? There was scarcely time for that; but even if there had been, how could he so humiliate himself? No, no, no, no! A thousand times, No!

There was yet one loophole of escape. To trust longer to the possible receipt of a cheque from a man whose name he did not even know, was out of the question. That had been madness from the first. That hope was the weakest of all broken reeds, and he could lean no longer on it. But there was still Lord Chesterwood's offer, and its recollection came upon him as a ray of light might fall upon the way of safety to one who lay awaiting death in the dark. He arranged his disordered hair and dress, and hurried to the building in which the Exhibition was held. There he found the Secretary, and as calmly as he could set before him the fact, that the contract for the picture of which he had spoken had been made with a man upon whom he could not depend. He should be delighted to sell the picture at once to Lord Chesterwood. His lordship, the Secretary said, had gone on public business to St Petersburg.

Hadn't Frank seen that in the papers?—No? How very singular. Great pity to deal with unsafe men. Quite easy to demand a cheque in advance. Lots of people did it, and— Good-day, Fairholt.

No hope—no hope now. Was there any chance of finding Hastings? Away to his rooms once more. No news of him or of his whereabouts. Frank went home again, and poured out a great tumbler of brandy, and drank it. Then he sat down to think; but thought was insupportable. The thought of his father's distress, his brother's contempt—and of Maud—O Maud, Maud!—and all her love for him tried by this vile revelation, and her heart bruised by it—it was all too terrible. He took up his pen, and tried to write to his father, and tell him of the miseries which surrounded him, and how they arose. He would have to know, and it was better that he should hear from the culprit—the criminal—yes, the criminal—himself. But Frank tore up letter after letter, and at last gave up all attempt to perform that bitter task. After a while, he poured out another glass of brandy and drank it, put on his hat and overcoat, and wandered aimlessly out into the rain. The winter afternoon was closing in, and the lamps were already gleaming ghastly in the fading light. It was all the same to him where he walked, and he gave no heed to the direction in which he travelled. His feet kept pace with his own fierce and bitter thoughts. But a man must walk fast indeed to outwalk his sorrows. To-morrow, this Nemesis of his folly would be upon him. If Fate's hand could have fallen then, striking him dead, he would have esteemed himself happy if only he could have been saved this cruel but well-earned shame, and if they who loved him could have been spared the anguish of seeing him so shamed.

I have been looking at this trouble through his eyes, and not my own, all this time. The trouble was not so vast as it seemed to him; but it is easy to philosophise on others' sorrows—even for a fool—hard as it is for the man who suffers to bear his suffering calmly even though he be a philosopher. And poor Frank, with no one near him to philosophise for him, and with no power of self-control within him, went the way on which his own desperation led him. And that way was all the more piteous and desperate because all that was good in him prompted him against it, whilst all that was weak in him beckoned him inexorably on.

#### C A V E S.

IN the time when the study of natural phenomena was a strange compound of superstition and mythological tradition, the condition of the interior of the earth was a favourite theme of conjecture and speculation. The globe was supposed to be hollow, and to be tenanted by inhabitants suited to an underground existence, whose lives were cheered by the presence of special planets, and whose wants were supplied by a fauna and flora as complete as those enjoyed by ourselves. An entrance to this subterranean world was to be found somewhere in the Arctic regions—which being the part of our globe least easy of access, was perhaps the safest place in which to define the geographical position of that

fabulous hole. The fact that Humboldt was asked to undertake a search after this imaginary cavity in the earth's crust, will shew that these strange superstitions must have had believers as recently as the present century.

Although we no longer give credence to these fanciful notions, we must at the same time admit that we know little concerning the interior of the earth beneath our feet. By a study of geology we can learn much concerning what is called its crust, but beyond this we can only hazard conjectures as to the composition of its mass. We know that the deeper we descend the shaft of a mine, the hotter does the temperature become. A thermometer registers one degree for about every sixty feet of depth. This observation has led people to infer that if it were possible to pierce the earth for a few miles, a point would be reached where the temperature would be high enough to fuse every known substance. The occurrence in many parts of the globe of hot springs, and the exhibition of volcanic action, have lent aid to these conjectures. In this way the theory came to be adopted that the earth consisted of a spherical shell filled with liquid fire. Of late years this idea has been considerably modified, and the earth is now regarded as something of a far more solid character. But there is no doubt that enormous cavities exist in its mass, which are charged with that molten material which feeds the active volcanoes.

It is perhaps this mystery about the condition of the interior of the globe which has caused men in all times and in all countries to regard anything in the shape of a cavernous opening in its crust with superstitious awe. This tendency exhibits one form of that searching after knowledge, that longing to explore the unknown, which guided Columbus across the Atlantic in spite of the protests of his frightened and mutinous sailors. We see the same tendency even in children at the sea-side, who will do what they can to explore the smallest crevice in the rocks which can by courtesy be called a cavern. We see the same feeling in their elders, who will give such a spot a local habitation under the title of 'the Smugglers' Cave.' It is a nice question, whether the lower animals do not to some extent experience a similar longing after exploration, when we see how a terrier will persistently grub away at some disused rabbit-hole, knowing all the time as well as we do that there is no rabbit there.

Whatever the notion be that has prompted men to dwell upon caverns with what may be called the pleasure of mystery, it is very certain that they have filled them with superstitious memories and fanciful legends. Hence we find in the multitudinous fairy tales of all countries, that caverns are made the homes of goblins, gnomes, and all the other beings with whom we made early acquaintance in those golden hours when a fairy tale had a bright reality, and when a goblin was real enough to cause us to think twice before going into a dark room. Let us take, for instance, the *Arabian Nights' Entertainments*, and see how constantly caverns are employed to give colour to its wonderful pages. What would the story of Aladdin be without its cave of jewels? Where too would Ali Baba have obtained his riches, if he had not stumbled upon that wondrous cavern with its magic pass-word?

Would not the story of Sindbad have lost somewhat of its charm if the travels of that remarkable voyager had all occurred on the upper earth?

From the regions of romance we can descend to those of reality, and note how the worshippers of the god of the Sun celebrated their mystic rites in cavernous recesses—how in India the followers of that Brahma who, with Vishnu and Siva, the other members of the Hindu trinity, was supposed to hold in his almighty hands the powers of good and evil, reverently adored him in their curious rock-cut temples. These temples, originally no doubt but natural openings in the mountains, have been skilfully carved with such intricate ornamentation, that they present all but everlasting monuments of that docile patience characteristic of oriental workmen. They have no doubt been beautified and enlarged by successive generations of fanatic worshippers, until they have arrived at that perfection at which we now find them. Ajunta, Ellora, and Elephanta are the most celebrated places where these rock-cut habitations are found, and altogether it is calculated that India can boast not less than one thousand examples of similar work.

Other parts of the world furnish beautiful examples of cave architecture, of which we may name two—the temple of Ipsamboul, on the banks of old Nile, and that wonderful ruined city of Petra, on the shores of the Dead Sea. This city is supposed to be identical with the Selah of the Scriptures—a stone-cut town, where tombs, temples, and general habitations vie with each other in the beauty of their design and adornments.

But putting aside these ancient monuments of human ingenuity and superstition, which are after all but the work of men's hands, there are far larger and more beautiful caverns in many parts of the globe which are due to natural causes. The first of these causes which we may enumerate is volcanic action, which has done so much in the past by upheaving the surface of the ground and altering its configuration. It is not surprising that such disturbances should result in cavities—blank spaces which may have been upheld, when first formed, by compressed vapours. Such a cavern is the Grotto del Cane near Naples, so called from the circumstance that it still exhales the poisonous vapour of carbonic dioxide, which forms an invisible stratum on its floor, and is fatal to dogs and any small animals that breathe near the surface of the ground. But with this exception, caverns produced by volcanic action are not of any great note, a few only occurring in those regions to which active volcanoes seem now to be relegated. The most striking and picturesque caves which exist still occur in volcanic rocks, although they must be attributed to another cause altogether. Among these we must name that beautiful cavity on the coast of Staffa called Fingal's Cave. This has been scooped out of the hard basaltic rock by the action of that restless excavator the sea. Here we have noble pillars of prismatic form, which rival in their regularity of outline the work of the mason's chisel. It is said that when attention was first directed to this and the other caves upon the island of Staffa—and curious to relate, this was less than a century ago—the theory was gravely propounded that the columns were in reality

petrified bamboos! Where the bamboos had originally come from, did not transpire; but possibly if the author of the conjecture had been pressed upon that point, he might have asserted that they were the remains of the fishing-rods of successive races of anglers who had haunted those parts in bygone days! We need hardly dwell upon the refutation by scientific aids of this comical idea respecting the bamboos—how the philosopher came upon the scene, and proved by direct experiment that it was the nature of this basalt to crystallise in this peculiar form as its stony particles were fused and again cooled—a part of that wondrous law which causes so many things in Nature to adopt regular forms, and which is illustrated in a minor way by a piece of sugar-candy, and more beautifully in those ice-ferns which spread themselves over our window-panes on a frosty morning. In many other parts of the globe we find these curious basaltic columns: in France; on the banks of the Rhine, where occurs another well-known cavern, the *Käse Grotte* or Cheese Grotto, so called because the columns are separated in such a manner as to resemble piles of cheeses; in Iceland; also in some of the West India Islands. In many other countries is exhibited this evidence of past volcanic action.

The caverns which are found on the sea-shore are of course due to that never-ceasing action of the waves which sculpture the hardest rocks into natural bridges and other strange forms. Indeed, were we in this connection to ask: 'What are the wild waves saying?' we might answer: They are telling us that atom by atom they are conveying these rocks to the ocean-bed. The sea is swallowing them up. They will also tell us that these tiny masses of matter are being slowly deposited in the silent depths below, forming new lands, which some day may themselves be scooped out into caverns and hollows by the same agency. The waves will tell us too that there is no part of this earth which has not in time past been below them. And so the endless cycle of changes goes on; waste on the one hand forming the matter by which, on the other, new continents are being built up.

Another class of caves, as numerous perhaps as those which occur on the sea-shore, are known as *water-caves*. These are caused by the erosive action of fresh water, and partly by chemical action, resulting from certain constituents of such water. The caves of Yorkshire, Derbyshire, and South Devon are of this character. These water-caves are also adding their quota to the lands beneath the sea, by means of the streamlets and rivers connected with them.

The time has long passed since caverns could be regarded with any feelings of superstition; for a very slight acquaintance with the science of geology must make the most inveterate mystery worshipper among us quickly cognisant of the laws to which they owe their origin. But many of these caverns are revealing to us histories which are far more wonderful than fairy tales. We allude to the so-called bone-caves, which in this and other countries are furnishing geologists and the scientific world generally with materials from which they can in somewhat form a history of prehistoric times. Ever since the discovery of the remains of an extinct species of rhinoceros in a cave at Orreston, near Plymouth, have scientific

men turned their attention to caverns and their contents, as to books from which they could learn much of the life which prevailed upon the globe in distant ages. This discovery was quickly followed by others. The celebrated Kirkdale Cave in Yorkshire—stumbled upon by accident—was cleared of the debris with which it was choked up, and yielded results of a high scientific value. Here remains of the elephant, mammoth, and other animals were recognised. Most of these bore the marks of teeth; and the occurrence of the bones of the hyena in greater numbers than those of any other animal, pointed to the inference that this cave had formed the den of successive races of those animals. This hypothesis was strengthened by a comparison of the gnawed bones with those taken from hyenas in confinement at the Zoological Gardens, London, with which they were found to correspond in a remarkable manner. The question how the remains of the larger animals were dragged to these, their last resting-place, being readily accounted for by the known habit which prevails among the lower creation of seeking out some secluded spot at the approach of death.

We some time ago devoted an article to Kent's Cavern at Torquay which, on account of the vast number of bones found there, has become the most celebrated place of the kind in Britain. The fact, too, of the remains of man having been found there gives to Kent's Cavern a natural pre-eminence. The probable age of these ancient men of Devon has given rise to no end of controversies, into which we have no disposition to enter. The gradual growth of the stalagmite upon the floor of the cave, founded upon calculations of its increase within recent years, has on one side been quoted as a kind of undeviating time-keeper by which to gauge the period which has elapsed since the deposit first began. When we consider how this material is formed; how the water, percolating through the soil above, becomes charged with the carbonic dioxide which enables it to hold in solution the lime, which it again gives up in the form of stalagmite, on exposure to the air; when we reflect how atmospheric change, rainfall, and a hundred other minor influences must affect these chemical changes—we must acknowledge that any calculations founded upon the thickness of calcareous deposition must necessarily be subject to error.

To come to the present day. We learn from Dr W. L. Lindsay, in his *Mind in the Lower Animals*, that 'the wild people—the jungle dwarfs—of the Western Ghats, in the Tinnevely district of India, have no fixed dwellings or dwelling-places. They "sleep in any convenient spot, generally between two rocks, or in caves near which they happen to be benighted." These wild folk of the hill-jungles of the Madras Presidency are in reality modern troglodytes or cave-dwellers, the representatives of those prehistoric men whose remains possess so much interest for anthropologists. The beast-men and wolf-children of India and Europe resemble savage races on the one hand, and many wild animals on the other, in their non-possession of other shelter than that which is afforded by caves or forests. Not only have they no proper dwelling, but there is incapacity for constructing artificial shelter. The wolf-children of India inhabit caves and forests, just as

do the wolves with whom they associate, and by whom it is currently believed they are, in some instances at least, brought up. "At the Lucknow madhouse," says Gerhardt, "there was an elderly fellow . . . who had been dug out of a wolves' den by a European doctor."

'Even in civilised Scotland of the present day we have a race of cave-dwellers in Caithness-shire, whose mental characteristics have been described by Dr Arthur Mitchell. And in the large cities of England there are hosts of waifs and strays of society—of gutter-men and children—of tramps of all kinds, who sleep under railway arches or in other equivalents of caves. In Scripture times too, man dwelt frequently under trees, stones, or rocks, or in caves.

'If the nature of man's dwelling is to be regarded as any reflex of his degree of mental development, much cannot be said for the present mental status, the constructive skill, of the hut-builders and dwellers of our own Scottish and Irish highlands and islands. The hovels of the Hebridean Islanders, for instance, are no advance on those of many savages, and are not equal, *mutatis mutandis*, to the nests of many birds. Thus, when compared with them, the bowers of the bower-bird appear at a decided advantage.'

## THE BELLS OF YARRICK.

A PROSE IDYLL, IN THREE SCENES.

### SCENE II.

THE interior of a bungalow at Allahabad. A large uncarpeted room, bare-walled; a French window opening into a deep-set veranda, whose roof, protruding some twenty feet from the main body of the building, seems powerless to mitigate the intense heat within. Lying back in a great cane easy-chair, apparently overcome by exertion, is a young officer who has just donned his regimentals; his figure is emaciated, his face pallid. Moving about quietly and unobtrusively, winding up such details as are necessary preparatory to departure, is a deft-handed well-disciplined soldier. Ever and anon he glances anxiously at his young master; but the latter is lost in a reverie, and does not seem to observe him. When all the details appear to be completed, the servant takes a business-like look round, to see that nothing has been overlooked; and then assuming a respectful attitude and saluting, he ventures to speak. 'Beg pardon, sir, but you're scarcely fit to sit a chair yet, much less a horse.'

The invalid turns his face without raising his head from the back of the chair on which it rests. 'I thought we decided not to revert to this again, Denny,' he says decisively. 'My mind is made up. I shall be in the saddle when the roll is called.' His face relapses into a smile. 'Why, from one point of view this cholera is a positive advantage; I shall ride two stone lighter—two stone if a pound, Denny; and if there's such a thing as gratitude in horse-flesh, Osric is the animal who ought to feel it!' And Gerald Herriek, for it is he, breaks into a rather hollow laugh to express his merriment. Consulting his watch, he adds: 'There is no time to spare; you had better be off and prepare at once. The muster

takes place in half an hour.' And Dennis Ladbrook salutes respectfully and leaves the room.

It is the memorable summer of 1857. Five years have passed away since Gerald Herriek quitted the peaceful scenes of Yarrick; and circumstances appear at last to have combined to give him an opportunity of satisfying his ambition. He had sailed for India. Before he had been there long the times grew out of joint; the complex social machinery no longer ran smoothly as of yore; new forces began to disturb its working, and strong measures were required to avert its threatened collapse. Disaffection had been shewn by the natives, and a great uneasiness had spread over the dependency. It was no time to waver, and the dispersed community which held India had shewn a bold front, tightening their grasp and rigidly enforcing discipline. For a time the disaffected had sullenly complied; but when it was noised abroad that one of the native regiments had disbanded itself, it was the signal for open revolt. The news spread rapidly, igniting slumbering disaffection east and west, and south and north; it passed like a shiver through the scattered English community, and they girded up their loins for the tussle which they saw had become inevitable. Then the storm burst, and each day brought with it sickening repetitions of bloodshed. It was a time for action, and strong hands prepared to do the bidding of clear brains—for the display of heroism, and heroism was forthcoming. The story of eventual success, hewn step by step against great odds and seemingly insuperable difficulties, stands out in letters of gold in military annals. Nana Sahib laid siege to Cawnpore, and the native regiments of that town dispersed to his camp. Those who were left in the doomed city determined to sell their lives dearly, and they accordingly set grimly to work. The ground, baked as hard as iron by the scorching heat, thirsted for rain, and no rain came; the workers, nothing daunted, pulverised it, dug trenches, and endeavoured to throw up earthworks; but the dust could not be made to cohere; and the only result obtained after incessant toil was a series of banks varying from three to five feet in height—a sorry defence against the Nana's guns and the overwhelming numbers of the besiegers. The tale of the awful time of privation and suffering which followed has been oft told—of how the wounded and dying were by stress of circumstances huddled together without the common necessities of life; of how our countrywomen, fired with an undying enthusiasm, parted with their raiment for gun-wadding, serving it up with their own hands to their grim and smoke-begrimed defenders. When the offer of a safe-conduct in return for capitulation reached the beleaguered, they looked around, and for the sake of those, accepted it. Then came that ghastly massacre of the innocents, which has stamped the Nana's name in letters of blood, to be held up to everlasting execration.

And it was to Cawnpore that Havelock, immediately on his arrival at Allahabad, had determined to push on. To proceed by forced marches in the heat of the Indian summer was no mean undertaking; but in the face of the difficulties with which he was beset the task became stupendous. His force, judged by numbers, was miserably inadequate; his commissariat was disorganised,

all the cattle having been driven off at one fell swoop by marauders; his troops were badly mounted; his artillery deficient; and to crown all, cholera was decimating his ranks. And here it is, on the departure from Allahabad, that we find Gerald Herrick and his faithful servant Dennis Ladbroke. Both are so altered as to be scarcely recognisable. The former is a boy no longer, but a man. The bright young face which gave promise in his youth has not belied its promise; it is developed, matured, refined; but it is also strangely emaciated. Something more than time has been at work here; it is cholera, which for the last six weeks has held Gerald Herrick in its tenacious grasp. A wonderful change too has come about in Dennis Ladbroke. Not the remotest trace of the rustic is left in him; during the period which has elapsed, he has developed into as smart and well disciplined a soldier as Havelock's ranks can boast.

In an hour after the short dialogue between the two has taken place, Allahabad is deserted, and Havelock's gallant band have started with their faces northward for Cawnpore. Many a hollow cheek tells of the dire complaint which has been amongst them; but their eyes are brightened with the fire of that enthusiasm which later is to serve them in such good stead. A halt is made, and shortly afterwards the first brush with the insurgents takes place. It is successful. In a few days Cawnpore is reached; and then Havelock draws up his forces in sight of the Nana's, these being disposed in a great curved line. He determines to advance in open column, to engage the enemy with his main body, and to deploy an ill-spared portion of his force to out-flank them. Like a wild beast brought to bay, the Nana gathers up his strength; he feels that a critical moment in his career is reached, and that should he be unsuccessful now, his dominion will surely totter and fall. The battle begins, and with fluctuating results rages, Havelock's exhausted forces making terrific onslaught. Again and again they charge brilliantly, and make many a determined stand; but the hail of metal from the enemy's guns works terrible havoc, causing them at length to fall back to recoup their shattered ranks. One great piece, played with a deadly precision, cuts line after line through the exhausted column, and it is seen that an attempt, at whatever cost of life, must be made to silence it. A small band, chiefly composed of volunteers from disbanded regiments, have gathered together, and hard by is a little knot of officers holding consultation. Suddenly one, wheeling his horse round, shouts out: 'That gun must be silenced! Will you follow, lads?'

Not a moment's pause; the answer is rattled back by all with a click of the teeth as with one voice: 'We'll follow you to eternity, sir!'

'Then come along!'

With knees glued to their saddles, with set jaws, and with bared sabres, the smoke-begrimed band dash forth from the main body, thundering towards the earthworks and the cannon's mouth, resolute to do or die. And in this band are Gerald Herrick and Dennis Ladbroke. Gerald feels that his last hour is come; but though the terrible exertion has been too much for the cholera-racked frame, the resolute spirit supports it to the last, and a fine enthusiasm lights up his face as

he dashes forward at the head of the little band of heroes. And now the gun is neared, though half the number have been mown down in the death-chase across the open; and Gerald, waving his sword, rises in his stirrups and plunges into the bristling array of bayonets, his comrades pressing up close behind. The brilliant dash of the little force is not to be withstood; the natives regard them as fiends incarnate, and with a parting volley from their muskets, turn and flee. For a few brief moments all is confusion while the sabres do their grim work. And now, at the first respite, Dennis turns from the mêlée to look for his young master; and with a great pang at his heart, sees only a riderless and terrified charger. In a moment the faithful fellow has dismounted, oblivious of everything but the prosecution of his quest amongst the dead and dying.

The carnage has been terrible; mangled forms and ghastly upturned faces meet his gaze on every side. Over the scene of slaughter hangs a great pall of sulphurous smoke, and there is a pulsation in the air as of the beat of a mighty ground-swell. Below the horizon the sun is sinking like a ball of fire, and the flaming copper-coloured heavens heighten the lurid effect. Threading his way through the debris, Denny sights the beloved form he seeks lying a little way apart, with the head pillowed on a heap of sand, and with the right arm dangling helpless by the side. The face is upturned and livid, and the eyes are closed. In a moment Denny is bending down and raising the head; and the honest fellow's face works with emotion as he gazes into that of his young master. 'Speak to me, for God's sake, Master Gerald!' he whispers huskily, with a great fear clutching at his heart.

At mention of his name, Gerald opens his eyes. 'Faithful to the last!' he murmurs. His servant replies not, for his voice has gone from him. 'Thank heaven! you are here, Denny; but I knew you would come. There is one last service I want of you.'

'Hush, hush! you are not going to leave me,' replies the faithful fellow.

'Yes; it's almost over, Denny. Death has come to me, and it has come as I hoped it would do, whilst I was fighting for my country and not lying in my bed. I've been hit in the chest somewhere, I think, and my voice is going. Bend your ear closer.' The voice, even as he speaks, grows fainter, and Denny's head is bowed to catch the words. After a pause, the dying lad resumes: 'I've been thinking of the old days, Denny; refreshing myself with a dream of the cool green Yarrick meadows.'

'Where I learnt you rabbitin', dear Ma'aster Gerald!' The reminiscence is too much for Denny, and a great sob shakes his frame.

Gerald's life is ebbing fast, and he does not hear the words; the eyelids have again closed before he resumes. 'You remember that stormy night when the belfry fell?'

'Yes, Master Gerald.'

'And how the Vicar loved his bells? Well, a great wish of my heart has been to replace them; and I hoped that when I got promotion I should be able to save sufficient to enable me to do so. The time for promotion is past; but yet, thank God, I can realise my hope. When I was down with cholera I wrote directions to my cousin

as to the disposal, in the event of my death, of the little I have. It will be mostly yours, such as it is.'

'What is money to me?' wails the faithful fellow.

'Steady, Denny; I haven't much more time.' With an effort the dying lad collects his thoughts. 'The Vicar, as you know, exchanges from Yarrick for a couple of months each year. I want a surprise for him. On your return to England, make your way to my cousin, and ask him to take the Vicar's substitute into his confidence, and get the belfry set up in the Vicar's absence.'

Denny has regained command over himself, and is gazing with adoration into the upturned face. 'O Master Gerald!' is all he says.

'What noise is that?'

'A cheer from our lads. The old colours are going up!'

'Aha! That's well.' Then, after a pause: 'You understand my directions, and will carry them out, Denny?'

'With my life!'

The left hand struggles to move, but Gerald falls back from the effort with a groan. In an instant Denny had raised him, and is pressing the hand to his lips. A smile passes over the drawn features; and the eyes, brightening for a moment, gaze towards the setting sun. 'Tell the Vicar I pictured him listening to my bells!' A rattle in the throat, a red stream from the lungs, and the spirit wings itself into eternity from its shattered tenement.

Half an hour later the patrol is going its round on the phantasmal task of inspection. It stops at the figure of a soldier kneeling, as though hewn in stone, by the side of his dead comrade. He is spoken to, but hears not. They touch his shoulder; then he rises as one dazed, and turns his face in dumb agony to the westward. The sun has fallen below the horizon, but the heavens are flushing in delicate rose-colour, and look tenderly receptive, as though receiving some well-loved guest. From the north, a cool breeze has dispersed the sulphurous canopy which for hours has hung over Cawnpore.

## THE OLD PART OF NAPLES.

FROM THE FRENCH OF JOHN PETER.

THE stranger who spends a few weeks in Naples seldom strays beyond the principal thoroughfares. The Toledo and the Chiaja are about the only parts of the town he knows. He may perhaps once have sauntered up Foria, and just walked the length of the Strada del Duomo. Naples dwells in his memory as a handsome, well-built city, where foreigners are cheated rather more than elsewhere, and where the loss of his pocket-handkerchief was a common occurrence. The Museum San Martino, and the magnificent view from the jetty of the Villa Nazionale, and the admiration they inspired, are not forgotten. But as a rule, the foreigner knows nothing of the true Neapolitan nor of the old city, whose inhabitants seldom stray beyond its precincts. He has no notion that by the side of the town known to us

all, and which resembles all other large towns, there is another of peculiar aspect, teeming with interest, once visited never to be forgotten, and in its way as striking as Pompeii.

We would fain usher our reader into this old town, unknown to foreigners. Let us take one of the first streets to the right as we go up the Toledo. A few steps off one finds one's self in the midst of narrow streets and lanes, at the utmost fourteen feet wide. There are high houses on each side, which never get a ray of sun except on the top floors; even in summer it is as cool as in a cellar. It is here that the lower orders are seen, not scattered, as in the better parts of the town; but densely crowded, living their every-day life. These folks live as much as possible out of doors. The dark flats and damp basements, where the poor huddle together as many as nine or ten in a room, and where the air is always foul, are dismal dwellings. They therefore live principally in the street; there they have their food at hand, and there they generally take their meals. If a Neapolitan wants milk, at daybreak and at sunset the cowherd and the goatherd pass his door, and he can get his hap'orth warm from the animal. Vegetables are hawked about until ten A.M. Peasants pass his door on donkey-back, seated on the croup of their animals, large baskets piled high with vegetables slung before them. Our friend need only whistle from his window, where a Neapolitan when at home is most frequently found, and the hawker stops; the bargain is struck, chiefly by pantomime; and then a basket is lowered and drawn up with the day's provisions.

Endive of a shiny white like mother-of-pearl, tomatoes of a glossy red, enormous cucumbers, artichokes, cauliflowers, broccoli, each in turn according to the season, with fruit and fish, constitute the food of the people. Meat is dear, and only indulged in on high-days and holidays. The vegetable hawker is hardly out of sight when the fruit-hawker comes round the corner. In August a lad may be seen carrying a basket of figs on his head, the fruit piled gracefully pyramid-shape, and the rim of the basket adorned with a garland of flowers. Next comes a sun-burned, bare-legged fisherman. In one hand he holds his basket, in the other a pail of seawater, with which he constantly sprinkles the fish. Now an individual appears in sight with a copper vessel, poised on his head, full of boiled snails; and now another comes along dragging a hand-barrow, on which stands a caldron full of Indian-corn over a pan of lighted charcoal. As for coffee, you can have a cup for the equivalent to a halfpenny; but chicory is the principal ingredient. If you are thirsty, at the corner of every street the *acquaiole* (water-vendor) will serve you with a glass of iced water flavoured with *zambuco* (spirit of elder-flowers) for a farthing; and in summer, the water-melon vendor for the same figure will cut you a slice of the red-fleshed, black-spotted fruit, so deliciously cooling to the parched palate. In autumn may be had the prickly-pear, ready peeled and daintily stuck upon a tin fork.

You have now had a glimpse of the dirty street, noisy and busy as an ant's nest. In the midst of all this bustle the artisan plies his trade. Generally each separate trade is centred in one locality. In one street shoemakers are at work at their small

tables, set outside the houses ; the doors stand ajar, and against the wall is hung a print of St Crispin and his son, the shoemakers' patron saints. In another, coppersmiths abound, and there the sound of the hammer is quite deafening while they beat the red metal into braziers and soup kettles. At the next turn you light upon the dyers, their hands and faces besmeared with divers hues. One man is resplendent in indigo-blue, another in orange, a third is madder-red. There is a street called Grande Giudecca—the old Jewish quarter before their expulsion from the Kingdom of the Two Sicilies—where old clothes are sold. Here amateurs of antiquities may often pick up wonderful bargains. Old Flemish tapestry, brocaded silks such as our grandmothers wore, and old lace may be ferreted out from amongst a lot of the filthiest and most loathsome rags. In one narrow passage the goldsmiths congregate. The huge pearl earrings so highly prized by Neapolitan wet-nurses, and a large assortment of heavy trinkets, gigantic brooches ornamented with red or blue cut-glass, enormous gold and silver rings, &c. glitter in their shop-windows, and may be purchased for very trifling sums. If you chance to stop before one of these shops, you are pounced upon by the owner, who first bewilders you with his volubility, then gently pushes you inside, and seldom lets you alone until he sees that you are quite determined not to make purchases. In the very narrowest and dreariest streets, which are not above seven feet wide, people are not at work ; gossiping old wives, dogs, pigeons, chickens, and here and there a turkey tied by the leg, fattening for some feast or other, are the only occupants.

And now let us proceed to examine what are the amusements of the people in these by-ways. In the north, every poor wight knows how to read ; but here they are the exception, and those who can, care little about it. It is marvellous to watch them talking and gesticulating by the hour. What about, you will ask ? About the lottery, the *terno* (first three winning numbers) drawn last Saturday ; the price of provisions ; the next fête-day ; the miracle of the Madonna ; the government. The Neapolitan is a chatter-box and a gambler. Gambling goes on everywhere, under the street-lamp or by moonlight, with greasy cards that look as if they had been used by bygone generations. But gambler though he be, the Neapolitan is sober ; though every one drinks wine, and public-houses are numerous. I counted as many as twelve in two small streets running parallel to each other ; yet, if one meets a drunken man, the chances are a thousand to one that he is a German or an English sailor, overcome by the heady wine of Apulia. The constant scuffles which take place in the street are one great source of amusement. When a row begins, a crowd assembles, attracted by the screaming which ushers in the fight. Very often it is the women who indulge in a tilt, not always bloodless, with such weapons as a comb or a shoe ; the vanquished party goes off into fits, and gets bled at the nearest barber's shop. Quiet, steady-going people meet at the small cafés, where they placidly drink a glass of water and take their *siesta*. The chemist's shop is the rendezvous of the notables of the neighbourhood—the doctor, the parish priest, the monk, or certain of the better-to-do shopkeepers. These worthies never allow themselves to be disturbed

by the noise of the rabble outside. They are scarcely at the trouble of rising to take a peep at the bride in an apple-green or sky-blue gown, turning out for the first time on her husband's arm, or even to kneel on the threshold when the Host is carried past.

Having viewed it by daylight, let us now try to depict Old Naples by night.

The town has been lighted with gas for many years past, but the lamps are few and far between, except in the principal thoroughfares. But now and then one notices a luminous point whence the figures of the passers-by are reflected in dark putline. These well-lighted spots are the stalls of the iced-water and water-melon vendors. The first stand behind a raised table, over which, on both sides, barrels of iced water are suspended ; in the front, large lemons are piled, like cannon-balls, one upon another ; at the back, a row of bottles, containing different kinds of sirup. These stalls are often very pretty-looking. I noticed one particularly the other day near the Porta Capuano: Above the table a sort of framework was erected, at the top of which there was a picture of the Madonna in a gorgeous frame, lighted by a small lamp ; at the sides there were candelabra, supported by gilt figures representing angels ; below the cornice, carved decorations, in the shape of fantastic-looking animals, sirens and dragons. White, green, red, and yellow were blended so as to attract attention without being glaring. Nothing could be prettier. The water-melon stalls are much simpler. The whole get-up consists in a table covered with ready-cut melons. Enormous quantities of this refreshing fruit are sold, and the ground is strewn with the green rinds. Neapolitans delight in the play. At the entrance of a small theatre, PUNCH and Don Nicola are made to hold a dialogue, and attract a crowd with their jests ; then the master of the show pockets the puppets and announces the performance, and the mob rushes into the narrow inclosure. The Neapolitan is also fond of the church ; he diligently attends the services, and is all submission to the priest's injunctions. I have heard old women repeating the Nicene Creed after the priest, and singing hymns, evidently as if they enjoyed it, though in a dolefully monotonous tone. When preaching is going on, the numerous chapels are crowded ; not unfrequently vulgar jokes, worthy of PUNCH outside, seem to be the attraction.

Let us now continue our nocturnal ramble. As we approach an open space near the Porta Capuano, our olfactory nerves are assailed by the odour of boiling oil or rancid lard. Eels, sardines, &c. are hissing in chorus in huge frying-pans. These delicacies are generally discussed where they are sold, or at some café close by, where the visitors are playing at *scopa* (a game of cards).

But what has happened now ? The noisy crowd is suddenly hushed ; there are lights in all the windows ; the passers-by fall on their knees. One hears the approaching sound of psalm-singing ; the parish priest is carrying the Host to a dying man. He has on his priestly garments, and is preceded by lantern-bearers, the vergers following in yellow coats. When the priest has passed, the people rise from their knees, and many of the faithful go with him to the house of mourning.

As the night wears on, the cafés close, the water-

vendor empties his stall, the melon-vendor carries off his table. But the street is not yet deserted. A man with a guitar is singing some popular song. The neighbours flock around, listen to the music, and sometimes fall asleep on the ground. People still come and go; the street is never empty; a breath of air at night is so refreshing after a sultry day, and every one has enjoyed his siesta. At last, at about one o'clock, the street is abandoned, the hum of the busy city is hushed, and the Neapolitans are asleep, many of them in the open air. How often have I stepped aside, when ascending one of the many steep streets, to avoid walking over a family who had chosen the pavement for their dormitory. Mattresses were spread on the ground, and father, mother, and children were all fast asleep and snoring. Without any sort of preparation, people sometimes lie down in the first corner and go to sleep. Match-vendors, cigar-end collectors, and peasants may constantly be seen sleeping on church steps or at street corners on the bare ground, and seem none the worse for it.

Old Naples is at rest. We take our leave. But after rambling so long through the narrow dirty streets, we long for air and space. A few steps off to the right, and we are on one of the quays which gird the city. How lovely the sea looks in the quiet summer night! The moonlit waves sparkle in the distance. On the horizon, Capri and Cape Misenum stand out in all their beautiful grace of form. Fishermen with their boats, plying their ealing by torchlight, are passing to and fro. The sea-breeze is refreshing. We are overpowered with fatigue; we have had a long walk. Our attention has been constantly on the stretch; we need rest. Let us go home; it is late. Good-night!

#### DR BISTOURY'S NIGHT-WATCHMAN.

'TELL you what, Doctor; you'll be getting robbed and murdered one of these days; you will, upon my word!'

'Hardly, my boy. You ought to know by this time that it's the province of us doctors to kill other people, not to be killed ourselves.' And with a thick chuckle at his own wit, Dr John Hunter Bistoury settled himself comfortably in his chair, and began to peel his third orange as carefully as if he were taking off a limb.

When the Doctor first came to New York, thirty years before, he had been in no way burdened with riches; but his face had proved his fortune in a different sense from that of the over-candid milkmaid in the song. The mere sight of that round, florid, jovial visage, in every crease of which a joke or a good story seemed to be lurking, was a cordial in itself, and appeared capable of reviving the most hopeless invalid without the aid of medicine at all. Mindful of the human weakness which makes so many worthy people regard their own ailments as a kind of personal distinction, the lessening of which in any way is a direct insult to themselves, Dr Bistoury skilfully took a middle course between alarming his patients by an over-serious view of their case, and offending them by appearing to make light of it. In this way he had acquired an enormous practice; and his reputation

now stood so high, that the mere éclat of his name had sufficed to sell an entire edition of his great work upon *The Mutual Relations of Mind and Body*, in which he proved to his own satisfaction, if not to that of all his readers, that all criminal impulses whatever, and indeed the very existence of sin itself, are wholly due to 'a morbid action of the physical system'—that a murder may be prevented by the timely use of Epsom salts, and an unbeliever converted by a judicious contemplation of the virtues of quinine.

'I can assure you, my dear Harry,' resumed the genial Doctor, 'that it's amazingly flattering to me to find myself considered worth robbing at all. No thief would have thought me worth a centre-bit in the days when your poor father—as fine a fellow, Harry, as ever breathed—used to come and sup with me upon biscuits and toasted cheese in my little snuggerly down town. And then, as surely as the time came to go, he'd turn to me and say: "Now, Jack, old boy, won't you think better of it, and let me write you a cheque—just to give you a fair start, you know?" But although I knew well enough that he'd have been only too glad to do it, I had to refuse; for my motto is, "Heaven helps those who help themselves!"'

'A motto which you'll find some black-masked gentleman exemplifying in this very hotbed one of these nights,' growled Harry Everett. 'Look here, Doctor; I'm not joking—I'm not indeed! Everybody knows you're a rich man; and it's got abroad that there's a room in your house which is always shut up; the very thing to make people think there must be something very valuable stowed away there; and yet after all that, you go living in this big house without a soul near you except the cook and Old Sam yonder, who wouldn't be worth a cent in a real scrimmage!'

'Well, my boy,' said the Doctor, with a curious smile, 'would it tranquillise your mind if I were to engage a night-watchman?'

'I should think so. That would be just the thing.'

'Very good. Consider it done.'

This room, of which Harry had spoken as being 'always shut up,' was a standing puzzle to the Doctor's few intimates. Not a man of them had ever crossed its threshold; and its master, when questioned on the subject, answered only by some joking evasion. Rumour whispered that one adventurous gentleman, rendered desperate by his wife's threat to give him no peace till he found out 'what Dr Bistoury kept hid in that room of his,' had actually attempted a burglarious entrance; but the attempt, if ever made, had been unsuccessful. It is needless to say that countless conjectures, and not a few heavy bets likewise, were being constantly made respecting the contents of this Bluebeard chamber. Many declared that the Doctor had fitted it up as a private laboratory, in the hope of discovering the Philosopher's Stone. Others were equally positive that it contained the hoardings of his whole life in American gold, his opinions being notoriously of the 'hard-money' order. A rival practitioner, of a somewhat cynical turn, suggested that it must contain the remains of the unfortunate patients who had perished under 'that fellow Bistoury's' ministrations; and one imaginative

lady, deeply read in *Jane Eyre*, stoutly maintained that the Doctor, in imitation of the hero of that famous work, had immured his wife in this mysterious *oubliette*, in order to enjoy unchecked the freedom of a bachelor life. Against this ingenious theory there was only one thing to be said—the Doctor had never had a wife to immure. This flagrant treason against the sex was the more unpardonable, inasmuch as he had had abundant opportunities of changing his condition, had he but chosen to avail himself of them. To most of those who questioned him on the subject, he replied that he was wedded to his profession, and that any other union would be flat bigamy; but to his friend Harry Everett, in a moment of after-dinner confidence, he told a very different story.

'My medical cousin Alice was the woman who ought to have been Mrs Bistoury, and an admirable fellow-practitioner she would have made for me. The way in which she once cut a splinter out of my thumb, did equal honour to her hand and her heart; and when she was only thirteen, she bought a skeleton with her uncle's birthday gift of five dollars' [a fact], 'and articulated it in a manner that was really masterly. But in an evil hour, she became tainted with a fancy for homœopathy; and after that, of course all was over between us. Such is life!'

The Doctor's agreement to engage a night-watchman quieted Harry's apprehensions for the time being; but a few weeks later, he returned to the attack once more. 'I say, Doctor, have you got that night-watchman yet?'

'Yes; some time ago.'

'Well, he don't seem to do his duty then, for I've passed this way at all hours of the night, and never seen him. Are you quite sure he's to be trusted?'

'Wait and see!' replied the Doctor oracularly.

And Everett waited, but did not see. The invisible watchman remained as invisible as ever; and Harry, out of patience with his old friend's seeming infatuation, had almost decided to take some decisive step on his own authority, when a new complication introduced itself into the drama. This was nothing less than the temporary retirement of the Doctor's veteran man-servant—popularly known as 'Old Sam'—whose health had begun to give way so manifestly, that his master insisted on sending him into the country for a three months' holiday, replacing him with another man, who had volunteered as promptly as if he had been keeping his eye on the place for a year past. The new-comer was a grave, smooth-faced, taciturn man, who moved as noiselessly as a shadow, and seemed a living combination of the two proverbial requisites of a good servant, silence and obedience.

But although the Doctor and his friends highly approved of this model domestic, there was one man who did not. That one was Harry Everett, who lost no time in announcing his opinion. 'Look here, Doctor. I don't want to be always bothering you about this robbery idea; but it's a fact that that new fellow of yours is up to some mischief. I was coming home pretty late last night, when I caught sight of him standing at the garden-gate, talking to a couple of men. One of them happened to turn his face to the lamp-light as I passed, and I knew him at once for a

noted thief, who goes by the name of "Badger Bill."'

'Indeed? Are you sure of that?'

'Quite sure. You know I never forget a face I've once seen.'

'Ah! In that case, it's time for me to act.' The last word was so curiously emphasised, that Harry, who was not wanting in shrewdness, began to suspect that his persistent warnings to the Doctor had been superfluous after all, and that the old gentleman was quite equal to the emergency.

This suspicion was confirmed one evening about a week later, when the Doctor dropped in upon him unexpectedly, saying: 'Give me some dinner, my boy. You've no engagement for this evening, I know; so I'm going to be very benevolent, and find you some amusement myself.—Have you ever read *The Count of Monte-Cristo*? because you're going to see a chapter of it dramatised to-night, and pretty effectively too, I flatter myself.'

'What do you mean?' asked Everett, staring.

'Why, you see, I told my servants, a few days ago, that I should be away from home to-night, and my cook naturally seized the chance of getting leave for an "evening out;" consequently, the house will be under the sole charge of that worthy man-servant of mine, against whom you're so unaccountably prejudiced. It's quite possible that the two honest gentlemen with whom you saw him talking the other night, may be kind enough to enliven his solitude with a visit; and so'—

Harry sprang to his feet, and cut a caper worthy of a dancing dervish, snapping his fingers by way of accompaniment. 'Capital! first-rate! I see it all now! But come now, Doctor; why on earth couldn't you tell me before that you were up to the whole game, instead of letting me make a fool of myself by preaching to a man as smart as any six of me?'

'Never mind, my boy,' said the Doctor, laughing. 'Your warning was kindly meant, all the same. Eat your dinner—you'll want it before the evening's over, I can promise you—and then we'll have our talk.'

Dinner over, the Doctor lit one of the incomparable cigars which were his sole luxury, and proceeded to expound his plan of action. 'I've locked up the outer room that opens into my mysterious chamber, which puts two strong doors between it and the robbers. My estimable servant will warn them of this, and they'll try the window instead. He'll let them in by the garden-door, and give them the old ladder that lies beside it to mount by. We'll hide in the stable, which—thanks to my keeping my brougham elsewhere—has been unused so long that no one would dream of suspecting it; but I can open the door easily enough. And then'—

'And then,' broke in Harry eagerly, 'we'll go for them the minute they appear. It'll be a fine chance to try my new revolver.'

'Better leave it at home,' said the Doctor quietly; 'we shall want no weapons for this job.'

'Why, are you going to mesmerise the fellows?' asked Everett, completely mystified.

'Wait and see,' chuckled the Doctor. 'We needn't be there till eleven, for my honest domestic will make sure, before giving the signal,

that I'm not coming back ; and besides, an experienced burglar seldom begins work till after midnight. The only thing to be sure of is that nobody sees us getting in.'

But in this, fortune favoured them ; and as the Doctor had foretold, the lock of the stable-door, rusty as it looked, moved without difficulty, and the two conspirators glided in, unseen and unheard.

Weary, weary work, crouching there in the darkness, with ear and eye strained to the utmost for the first sign of the coming danger. Dr Bistoury's practised nerves bore even this prolonged trial easily enough ; but to the impulsive, excitable Everett it was absolute torture. Like all young soldiers, he found the suspense before the action infinitely more trying than the fray itself. The stable opened on the street close to the garden-door, and its farther window, at which the two watchers had posted themselves, commanded the whole side of the house, the blackness of which was relieved only by a solitary light in one of the upper windows. Suddenly the light vanished, and reappeared a moment later—a performance repeated three times in quick succession.

'That must be the signal,' whispered the Doctor. 'Keep your ears open, Harry.'

Courageous as Everett was, he felt his pulse quicken, and his hand went instinctively to the revolver which, despite the Doctor's verdict, he had persisted in bringing with him.

'Hark ! Was that a stealthy footstep outside ?'

The next moment came a low whistle, instantly answered from the house ; and then a shadowy figure, issuing from the building, glided noiselessly to the garden-door, and opened it to admit two others.

'They've got the ladder,' whispered Dr Bistoury, as the three phantoms crossed the garden. 'Be on the look-out, my boy ; you're going to see something worth seeing !'

The ladder was soon planted against the mysterious window ; and Badger Bill, after whispering to his comrade to 'keep an eye' on their worthy confederate, ascended, and cutting out a pane so dexterously that the sound was barely audible, put his hand through and shot back the hasp. His two assistants mounted after him ; and Bill, stepping cautiously into the room, turned the 'bull's-eye' of his lantern upon its interior.

Instantly the treacherous servant recoiled with a stifled cry : 'Ain't that a—*a coffin* over yonder ?' whispered he tremulously. 'Good gracious ! suppose there should be a dead man in it, and'—

'S'pose you should be a thunderin' big fool !' growled Bill savagely. 'Shut your mouth, will yer, or thar'll be another dead man somewhar round soon. I'm a-goin' right in—I am !' And he stepped resolutely forward.

Crash ! the coffin-lid burst open, and a skeleton, thrown out in ghastly relief by the red light that flamed in its eyeless sockets, started up with a hideous rattle, thrusting forward its bony arms and grinning jaws as if about to spring upon them. The *Sauve qui peut* of Napoleon was not more decisive. The honest servant gave one yell sufficient to wake the whole neighbourhood, and rolled on the floor in convulsions. The second burglar, leaping backward, dashed his head with such force

against the corner of a bureau, that he dropped as if felled with an axe ; while Badger Bill, making a frantic rush for the window, overturned the ladder, and fell crashing along with it, breaking his leg in the fall.

'You see now, Harry,' said the Doctor, as they went up-stairs after seeing their unbidden guests marched off by the police, 'that my night-watchman *did* know his duty, although there's nothing more unearthly about him than a few concealed springs, which are released upon the approach of any one, and a little phosphorus. As for this wonderful room, you see it's only a laboratory after all. But the stories that people told about it amused me so much, that I must plead guilty to having given them a good deal of encouragement. Now, let us be off to bed ; and I think you may sleep in peace after this, for it strikes me it'll be some time before anybody robs *my* house again.'

And indeed, no one has ever attempted it since.

## BREAD AND BISCUITS.

BREAD, as we all know, is the staff of life, and is a necessary at every meal ; but there are some things not so generally understood regarding this important article of diet. From its porousness and easy digestibility, bread is better adapted than anything else for mixing with and separating the other substances which we eat ; and it is extremely nutritive as well. One pound of bread contains more nitrogen than a pound of pork. In England and Europe generally, bread is of two kinds—fermented, and unfermented or aerated ; and in most European countries it is made from wheaten flour. Wheat consists practically of two parts—the bran or outer covering, and the central grain or *fecula* ; and it is according to the quality of the grain and the amount of husk left in it after sifting, that the value of the flour varies. There are four classes of flour : (1) Fine households or the best ; (2) households or seconds ; (3) brown meal ; and (4) biscuit-flour.

The whiteness of the flour is generally, but not always, a test of its purity and nutritive value ; for the finest flour sifted from red wheat is of a darker tinge than 'seconds' obtained from white wheat, though the red wheat is more nutritious. The nutritive value of bread depends chiefly upon the flour from which it is made, but also upon the process by which it is made. For some constitutions, white bread is best ; for others, brown ; and for others again, aerated.

Of fermented breads, the two most wholesome kinds are brown bread and that made from 'seconds' flour. Pure white bread made from the finest households is not so nutritious as that made from 'seconds' flour, and for this reason : 'seconds' flour contains a portion of the husk, and is therefore endowed with all the most important substances required to form blood, bone, and muscle—namely gluten, starch, oil, and a large proportion of mineral materials ; so that bread made from this flour is more valuable in point of nourishment than bread made from the finest flour, from which the phosphates, &c. have been entirely extracted.

It is therefore a great mistake to remove all the husk or bran from the flour, except for delicate people.

There was much talk some years ago about the nutritive value of brown bread, some medical men asserting that it was more nutritious than any other kind of bread. Time and experience, however, have shewn its true value. Bran and pollards, in which there is a considerable quantity of phosphate of lime, so valuable as nutriment to the bones and other tissues, of course predominate in brown bread, but they have all the wheaten elements besides. To some people, however, bran and pollards are too irritating, especially to those with delicate organisations; and as most of us can take the necessary phosphates in other ways, brown bread need not be eaten indiscriminately by every one because of its nutritive value.

It is quite impossible for the system to assimilate the bran; though, like cheese, its presence in the stomach stimulates the digestion of other things. Brown bread is very useful for its laxative properties, and these render it very beneficial to persons of sedentary habits, or whose occupations preclude them from taking much exercise in the open air.

A delicious sauce may be made from brown bread, the preparation being the same as that for white-bread sauce. It is not very widely known; but mixed with one or two cooked tomatoes, forms a most palatable addition to a joint of roast mutton.

The bread par excellence, however, according to the majority of medical men, is aerated bread. A patent for the making of this bread was taken out about fifteen years ago; but since then it has not enjoyed nearly the popularity and consumption that it really deserves. It has many decided advantages, and is a considerable saving in many ways. 1. More bread is made out of one sack of flour by this process than by any other. 2. It takes much less time to make. 3. The dough requires no handling. 4. It is perfectly pure, being simply flour, water, and salt. 5. The cost of machinery and the carbonic acid gas is much less than that of the yeast used in the fermenting process. It is very strongly recommended by medical men for ordinary diet and in cases of indigestion. According to Dr Corfe of the Middlesex Hospital, it is particularly valuable 'in those cases of dyspepsia which so often affect the brain-workers of the great metropolis, men who work for the press, &c.' Again, infants brought up partially or entirely by hand thrive especially well on it. Aerated bread mixed with a little milk-and-water forms a soft jelly-like compound, and is then easily sucked through the tube of a common feeding-bottle.

Beyond these advantages, the general introduction of aerated bread would be a decided gain from a humanitarian point of view, for it would save a large number of human lives now annually sacrificed in London bakeries alone. Dr Guy affirms that no class of men, save the Redditch needle-grinders, are liable to so severe and often fatal diseases of the chest as the men employed in bakeries. Forty-two years is rather more than the average duration of their lives. Aerated bread besides keeps better than bread made from yeast, and this proves its superiority over fermented bread, for it is a well-known fact that the best

bread grows stale slowest. The difference between fresh and stale bread is owing to the condition of the starch in a loaf. But when the starch has hardened, the defect may be easily remedied by inclosing the loaf in a tin case and placing it in an oven for a short time, after which the stale loaf reappears a fresh one.

A word as to a test for good bread. A loaf should be of a perfectly even texture, of uniformly small holes like a fine sponge. If its texture is good, and its layers can be easily detached, and it can be crumbled by the fingers into a coarse powder, or thoroughly soaked in water, it is perfectly made and baked. If not, there is a fault somewhere, and it is either adulterated or imperfectly baked.

In conclusion, a word as to the well-known variety of bread called biscuits may not be out of place. There is no yeast in the composition of biscuits; they are unleavened and very highly dried; and it is this which makes them so invaluable to people who suffer from a superabundant amount of adipose tissue. Biscuits are rather too hard for an every-day bread-stuff if made from flour and water alone, as 'captains' and ship-biscuits are. But they are very useful to travellers where bread is bad or unattainable. If soaked for a few hours in water or, better still, milk, they soften, swell, and with the addition of a little cream and sugar, make a very delicious and palatable dish. When kept dry and free from the air, biscuits possess the immense advantage of allowing to be stored for use for a great length of time. Latterly, there has sprung up an important trade in biscuits contained in close tins for domestic use. The sale of these tins of English biscuits of different sorts has become quite immense. They are seen in the shop-windows of grocers all over the continent.

#### THE ROSE AND BIRD.

A BIRDLING sang upon the spray,  
What time the lanes were white with May;  
Sweet rose his thrilling, tender tune;  
Ah! how he welcomed sunny June.

A crimson rose, her dewy head  
Upcreased from her green, leafy bed,  
Toward the blue and cloudless sky,  
And thus she murmured with a sigh:

'O that for ever June would last,  
Nor be the heavens e'er o'creast;  
That storms and gales should own no sway,  
My life be one long summer day.'

Dark grew the sky; the rain fell fast,  
And thunder mingled with the blast;  
The birdie cowering ceased his mirth,  
The rose fell crushed and torn to earth.

Thus is it ever! When we dream  
No danger nigh, and safe we seem,  
Just Heaven checks our boastful pride,  
And sends the peril we denied!

## VOYAGE IN A SNEAK-BOX.

IN American phraseology, a sneak-box is a species of canoe that can accommodate a single individual, who works his way by oars along the sea-margin, rivers, or lakes. Various, the vessel is styled a duck-boat, perhaps from being employed in shooting wild-ducks. Anyway, it is a canoe or boat of a peculiarly light fabric, but provided with a deck, open at the middle, where the voyager sits in plying his oars, and where, under cover of a hatch, which is closed at night, he can stretch himself out on cushions and go to sleep secure from molestation, while the boat is saved from drifting away by being tethered by a rope to a tree or some other object on shore. A journey by water in this fashion is, of course, attended by dangers and difficulties; but it suits the adventurous spirit of Americans, who, for the sake of frolic and personal independence, do not mind privations or trouble in their expeditions.

Mr N. H. Bishop, who had gained some élat by a long voyage down the great rivers in a paper canoe, increased his fame by accomplishing a voyage in a sneak-box from Pittsburgh, situated between the rivers Monongahela and Alleghany, which here unite to form the Ohio; thence to the Mississippi; and so on to the Gulf of Mexico, a distance of more than two thousand miles. In his book describing this extraordinary excursion, entitled 'Four Months in a Sneak-box,' Mr Bishop wanders into a variety of extraneous details, which are a little embarrassing to the reader; but by skipping over these passages, the narrative is lively and interesting, and offers striking instances of skill and endurance in carrying out what must be called a very whimsical project. We will try to give a sketch of this strange voyage on the great inland waters of the United States. To begin with the boat; it was built to order on the Atlantic coast, and carried by railway to Pittsburgh, where it was launched on the Monongahela, December 2, 1875. The boat measured twelve feet in length, was firmly constructed of white cedar-wood, and so

light that it could easily be lifted by two men, and carried or pushed on rollers across portages, when it was necessary to avoid following a long bend in the river. Beneath the hatch there was room for stowing a change of clothes and a supply of provisions, such as tinned meats, bread, and coffee. There was a kind of shelf which acted as table; and here, reclining on his side, the voyager could write letters or post his log-book. At night, a candle two inches high could be lit without endangering the roof. There were holes for ventilation when the hatch was down. Among the articles accommodated were a few cooking utensils, powder and shot, and a long duck-gun. The heating of water for coffee, and cooking, were conducted on the river-banks.

Mr Bishop lost no time in starting. Off he set at once down the Monongahela, and all went well with him till he came to the junction with the Alleghany, which was filled with cakes of floating ice that dispersed themselves over the Ohio. A boat of ordinary structure would probably have been stove in by the ice-cakes; but the sneak-box being made of elastic timber, coped with the difficulty, and got safely into the central part of the Ohio. The rapid current carried it forward thirty-six miles in four hours and a half. Considering this to be a good day's work, the voyager tied the boat to the shore, and retired under cover for the night. His bed consisted of hair-cushions and a coverlet, while the bag containing his wardrobe served for a pillow. A slice of bread-and-butter, a morsel of preserved meat, and a drink of water, were his supper. He carried no beer or spirits, and appears to be a strictly temperance man, on which account he kept his brain clear for every emergency. Nothing disturbed the silence of the night but the whistle of steamers making their way through the ice-packs. Refreshed by the night's sleep, our voyager despatched a cold breakfast, and was off at half-past eight in the morning. Unfortunately, the atmosphere was so thick with smoke from manufactories, that nothing could be seen of the natural scenery during the day. Keeping clear of

the ice, there was no misadventure. In the afternoon of the second day he passed Wheeling, a busy city, eighty miles from Pittsburgh. The ice now disappeared, but was replaced by oil, which coming from the refuse of oil-mines, unpleasantly covered the water. Cold meals being found not quite agreeable, a small coal-oil stove was purchased. With this simple appliance, coffee was warmed, and there was no further difficulty about cooking. We learn that vast numbers of this species of cheap and easily managed stove are now used all over the western rivers, and have proved an immense comfort to traders and excursionists. 'The economy of its use is wonderful. A heat sufficient to boil a gallon of water in thirty minutes can be sustained for ten hours at the cost of three cents [three-halfpence].' The oil employed is free from any danger of explosion. We have not heard of these handy American oil-stoves being known in England.

Proceeding onwards, a stoppage was made at Moundville, to visit the sepulchral mound of the aborigines from which the name of the place is taken. To see this object of antiquity, the boat was left with the hatch securely locked. The mound, which is nine hundred feet in circumference and seventy feet in height, has been opened up by passages, and found to contain two vaults with skeletons and various copper rings and other antique ornaments. By whom the mound was constructed, remains a mystery. Returning to his boat, the voyager went on his course down the Ohio, passing several islands, and always stopping at night where suitable places could be pitched on out of the reach of steamers. Although prepared for rowing, there was no great necessity for exertion. The current was usually sufficient, and the chief thing required was to keep the boat on its right course, free from obstructions. Thirty to fifty miles a day were commonly made. Sometimes there was chaffing with travellers on board of vessels passing 'up or down the river. On no occasion was there any attempted violence or interruption. Day followed day very tranquilly. It was a solitary existence, but was free from business cares; and with an abundance of fresh air and mental exhilaration in seeing new scenes come into view, proved exceedingly healthful. The Ohio is generally about half a mile wide, so that there was ample space for guiding the small craft according to pleasure. The day's exercise and vigilance produced sweet sleep when all was closed in for the night. With all its privations, we can fancy this to have been an enviable kind of life.

In England, one can have little idea of the miscellaneous traffic on the great American rivers. Winter is the time for migrating southwards, not only for sake of pleasure, but for trading. There are numerous shanty-boats or scows, flat-bottomed, with a dwelling made of boards on deck, owned by men who with their families make a living by picking up floating lumber, or doing business

with persons on shore as they go along. Dealers in clocks and sewing-machines, tin-smiths, grocers, saloon-keepers, and barbers, are among this migratory population. Some of a more loose class are alleged to be hog-stealers at fitting opportunities. It is not unusual for young men 'out of a job' to club their few dollars to build and equip one of these shanty-boats, and descend to New Orleans 'as negro minstrels, trappers, or thieves, as necessity may demand.' As for food, all rely greatly on salt-pork, bacon, flour, potatoes, eggs, omelets, molasses, and coffee. In nearly every instance, when the parties reach New Orleans, the boats are sold for firewood, and the return voyage is made on board an up-river steamer. Thousands of people spend their lives in this way, trying their luck in going down and up the great rivers. Like flocks of birds, they study the seasons, spending their summers in the north, and wintering in the sub-tropical regions at the mouth of the Mississippi. Such is American river-life, something quite unique. Mr Bishop piloted himself wonderfully down this grand water highway, shanty-boats, steam-vessels, or coal-barges constantly coming into view, and for the most part disposed to be friendly. He, however, kept a sharp look-out, for afloat and on the high river-banks there are roughs who would think no more of sending a ball through him than of shooting a wild-duck.

Approaching Cincinnati, the voyager plied his oars and made considerable way, the state of Ohio on the right, and Kentucky on the left. Hereabouts, in the dark and in a snow-storm, he was compelled by the extreme cold to lock up and leave his sneak-box in a creek, in order to seek shelter and food for the night. Consisting of but a few houses, the place was called Pleasant Run, though anything but pleasant on that dismal night. There was a difficulty in finding any one to give him shelter. At length he tried the house of a German tailor; who after examining him closely, thus addressed him: 'Mine friend, in dese times nobody knows who's which. I say, sar, nobody knows who's what. Fellers land here and eats mine grub, and den shoves off dere poats, and never says: "Tank you, sar," for mine grub. Since de Confederate war, all men is skamps. I fights twenty-doo pattles for de Union, nots for de monish, but because I likes de free government; but it is imbossible to feeds all de beebles what lands at Pleasant Run.' To these remarks, Mr Bishop gave an assurance that he would pay well for food and lodging; and was told in reply: 'Dat's what dey all say.' However, an arrangement was come to, and the benighted excursionist was well treated. The tailor's bark had been worse than his bite.

There was here a compulsory residence for several days. The sneak-box was frozen up and could not move. At length the temperature unmodified. Moved less by this circumstance than

by a hint that river-thieves had laid a plan for stealing the little vessel, Bishop would stay no longer. Paying his bill and thanking his host, he caused the boat to be cut out of the ice and carried to the navigable part of the Ohio. He was now once more afloat; and in a few days reached Louisville, where he had some difficulty in passing the rapids of the Ohio, and set once more on the right course. In skirting the Indiana shore on the 25th of December, he was hailed from a shanty-boat with a 'Merry Christmas,' and asked to come on board to dinner. The invitation was accepted; and he enjoyed a sumptuous entertainment, for he had that day already rowed fifty-three miles. On the last day of the year he reached the Mississippi at Cairo, and was now on the 'Father of Waters.' Since quitting Pittsburgh, he says, 'the faithful sneak-box had carried me more than a thousand miles.'

There is a peculiar solemnising grandeur in the Mississippi. At Cairo, it has already received the Missouri, which doubles its volume of waters, and gives it a breadth of two to three miles. Although afterwards receiving many large affluents, the breadth is not greatly increased, each fresh accession only adding to its depth. When our voyager entered the Mississippi, the weather was squally, and he was driven to take shelter at Island No. 1, where he dined, and saw the sun come out in all its glory. The great river is noted for its sand-bars, which appear above water, and are the refuge of large flocks of ducks and geese. The islands are known by being numbered on the charts. There are numerous turnings and windings in the river, also partial shiftings of the course on the level plains, owing to inundations. Mooring his boat at Island No. 5, he landed to cook his dinner, which he ate under some giant sycamores, surrounded by a flock of beautiful parakeets, variegated with green, yellow, and red colours. These birds were an indication that he was entering on a southern clime. Pushing on to the river-side town of Hickman, he added a basketful of mince-pies to his stock of provisions. Forty-five miles farther on, he passed Reelfoot Lake, which was produced by earthquakes in 1811-13, when a large portion of arable land sunk out of sight, and deprived the inhabitants of their farms. Hundreds of square miles were lost by the terrestrial convulsions. Persons interested in geography will be gratified in perusing Mr Bishop's account of Reelfoot Lake. We must pass on to what he says of the cotton-fields and swamps of Louisiana.

In the lower part of the Mississippi, the land would be an earthly paradise but for the frequent overflows, which submerge everything, and produce new channels, transform peninsulas into islands, leave swamps that are malarious, with intermediate stretches of rich 'river-bottoms.' On the higher patches of ground are seen the log cabins of squatters, 'game enough to satisfy the most rapacious, beast and bird of peculiar species, and over all, the immense forests of cypress, sweet-gums, Spanish oaks, tulip-trees, sycamores, cotton-woods, white-oaks, &c.' For the zoologist and botanist, there may be said to be boundless scope for their investigations. As the voyager advanced, the air grew warmer, the heat in January being like that of a July day in the north. Negro cabins with black children scrambling about came

into view. One evening, when Mr Bishop was looking about for a creek where he could halt for the night, he fell in with a flat-boat occupied by a man and his family who were similarly engaged. They halted in company. In the morning, when this new acquaintance departed on his route, he gave his experience of human nature in a sensible piece of advice: 'Don't leave your boat alone for half an hour, stranger. Niggers is bad, and some white folks too.'

In the afternoon of the same day, when floating with the current, our voyager in passing round an island came upon a flat-boat, with which he had exchanged civilities up river. The owner, who is spoken of as the captain, renewed the acquaintanceship. He was a fine type of the enterprising American, and told his history. Reduced to poverty by the war, in order to support his family, he built a scow and set up as a fisherman, penetrating with his vessel into the weird waters of Reelfoot Lake, and despatching the fish that he had caught to remote settlements. In one year he made four thousand dollars. He was now about to visit Northern Texas with his scow, which was to be towed by casual steamers. He would stop here and there to fish with nets, and trap game and ducks; all of which, minus what supported his family, would form his stock in trade among settlers in the Far West. In following out this intention, he scarcely allowed himself any rest, but floated on night and day. He was an educated man, and Mr Bishop found his 'society delightful' during the few days the two kept together. On the voyager went, passing Memphis, Vicksburg, and Natchez. Near the first-mentioned place, the swift current bore him near the shore, where a small masted vessel was anchored, and he heard the cheery cry of 'Stranger, pull in here,' addressed to him by a group of three roughly clad young men, who were engaged in frying salt-pork and potatoes. One of them drew his sneak-box to the bank; and sitting down beside the party, they told him their history. They had been out of work; so, investing sixty dollars in an old sloop of about two tons burden, putting on board a harrel of pork, a barrel of flour, some potatoes, coffee, salt, and molasses—which cargo was to last three months—they started to cut canes in the cane-brakes of White River, Arkansas. These canes were to be utilised as fishing-rods, and being carefully assorted and fastened into bundles, were to be shipped to Cincinnati by steamer, and from there by rail to Cleveland, on Lake Erie, where they would be disposed of. They had come down the Mississippi from Iowa, had been frozen up in creeks, and suffered various other hardships, but looked forward to making a successful adventure. They would be able to cut twenty-five thousand fishing-rods. An excellent specimen this of the scope for enterprise on these great waters.

One of the young men, named Stirling, who was engaged in this trade of gathering cane fishing-rods, related an anecdote illustrative of the administration of justice in these parts. In a river-trip he came upon a steamer which had lost its anchor, and the captain offered to reward him if he could find it. Stirling set to work, and found the anchor with its coil of rope. 'When the steamer returned up-river, he delivered the anchor and coil of rope to the captain, who, intending to defraud the young

man of the promised reward, ordered the mate to cast off the lines. The gong had signalled the engineer to get under way, but not quick enough to escape the young claimant for salvage, who grasped the coil of rope, and dragged it ashore, shouting to the captain: "You may keep your anchor; but I will keep your cable as salvage, to which I am entitled for saving your property." A few days afterwards, Stirling, wishing to know whether he could legally retain the coil of rope, proceeded to a town in the state of Mississippi, to consult a negro justice of peace, said to be learned in the law. Having stated his object, the learned justice said: "Dat's rite, dat's berry good, sah; now you jes macadamise de case to me." The case was "macadamised," or made plain to the sable justice, who, after some meditation, delivered his judgment: "Dis court will apply de common law ob de state ob Mississippi; and dis is it: 'What you hab, dat you keep.' Dis is de teachings ob de bar, de bench, and de code." Stirling was satisfied. He kept the cable.

Again the voyager was on his way down the Mississippi, but was occasionally a little confused as to the route, on account of diverging branches of the great stream. One day he fell in with a gentleman who told him some sorrowful particulars of a Mr John C. Cloud, who had become famous for his feats as an oarsman. Cloud had for a bet rowed in a skiff all the way by rivers from Philadelphia to New Orleans, where he was lost sight of by his friends and admirers. Bishop now heard an explanation of the mystery. The chief sustenance of the unfortunate man was whisky, of which fiery liquor he stowed a jar of ten gallons in his skiff. As a consequence of this indiscretion, and of exposure to malaria, he perished when almost within sight of New Orleans. He was found dead in his boat with the fatal jar at his feet. A kind-hearted planter had the body decently buried.

The end of the river-part of the expedition in the sneak-box was now at hand. Plantations and handsome mansions were in sight. One morning, New Orleans, 'the Crescent City of the Gulf,' with numerous steamers and other vessels, came into view. The time occupied in rowing down the Mississippi from the Ohio had been nineteen days. We let the adventurous voyager give the account of his landing. 'Anxious to escape the officious kindness always encountered about the docks of southern rivers, I peered about, hoping to find some quiet corner in which to moor my floating home. Near the foot of Louisiana Avenue, I saw the fine boat-house of the "Southern Boat Club;" and being pleasantly hailed by one of its members, hove to, and told him of my perplexity. With the ever ready hospitality of a southerner, he assured me that the boat-house was at my disposal; and calling a friend to assist, we easily hauled the boat out of the water up the inclined plane into her new quarters.'

Although the river-excursion was finished, Mr Bishop, after a short stay in New Orleans, of which he gives a pleasant description, caused his sneak-box to be transported to Lake Pontchartrain, whence he made his way to the margin of the Gulf of Mexico. He then rowed along the shore in a northerly direction. At New Orleans he had good-naturedly allowed a young gentleman, whom he

calls Saddles, to accompany him in a separate boat. Mr Saddles turned out to have tastes resembling those of the ill-fated Cloud. Ultimately he broke down, and had to be left behind—another melancholy example of the evils of intemperance. An interesting account is given by Mr Bishop of his sea-coast voyage, with divergences into the rivers and bayous of Florida. He happened to witness alligator-hunting, which is carried on in the southern rivers not so much as a sport as a matter of trade, for sake of the alligator's skin, which is tanned into leather. So great is the destruction of the animal, that in no long space of time the alligator will be extinct in American waters, which, as far as we can see, would be an advantage. At the port of Cedar Keys the excursion terminated, and the voyager with his sneak-box were transferred to a railway train, to be conveyed homewards. The voyage had lasted four months, and had altogether extended to two thousand six hundred miles.

We cannot close our notice of Mr Bishop's entertaining volume, without recommending it as worthy of perusal by all who are fond of reading works of adventure by sea and land. In our opinion, it might be considerably improved by the excision of various redundancies, also by the introduction of dates and an index. It has to be remarked, that although purporting to be published by David Douglas, Edinburgh, the book as regards paper, typography, and wood-cut illustrations, is apparently a product of the American press.

W. C.

## A LIFE'S ATONEMENT.

### CHAPTER XV.—HISTORY.

*Every man plays Hercules at one time or another.*

HASTINGS packed up such of his belongings as seemed needed for a sojourn of a month at Boulogne, and sat down upon his bedside, with a big portmanteau in front of him and a big cigar in his mouth, to look out the train for Dover. The prospect of the jaunt was pleasant to him. As for his debts, they were such old friends that he would have been almost grieved to part with them. Natively, there was no honest man in Europe than this flippant and idle young gentleman. Debt at Eton and debt at Cambridge had dulled his moral perceptions—that was all. It would be unfair to blame the man for the faults of a whole system. He had been steeped in credit ever since he had been a little boy. That everybody would be paid and exceedingly well paid one day or other, went of course without saying. The young gentleman justified himself after his usual fashion. 'The poet remarks with great felicity that there is no joy but calm. Very well, then. It is the business of every man to preserve his life from all fluctuations, and to hold himself at one level. Happy is the man who has no history. My highly superior father holds me in poverty at this time, and will one day burden me with great wealth. It is my double duty to get into debt. To-day's debt feeds yesterday's depletion, and provides a relief beforehand for the repletion of to-morrow. Aha! 'Tis quaintly, wittily, and wisely put. Credit is the compensating balance of the whole system of human affairs. Good again.'

Resuming the study of the time-table, suspended in behalf of these reflections, Hastings was startled by an unusually imperious knock at the front door. A foreboding touch came in the midst of his easy gaiety. The door below was opened, and by-and-by the neat and rosy housemaid appeared with a message for him, to the effect that Mr Robins of Deal desired to see him.

'Robins of Deal, and Robins of Deal,' said Hastings rhythmically in a sort of pensive chant. 'And who the dickens is Robins of Deal?—Shew the old gentleman up, my dear, as the ardent inquirer said to Cornelius Agrippa.'

The rosy housemaid, who was of opinion that Mr Hastings was the most perfect of his sex, turned up the sitting-room lamp and went downstairs. Then the visitor came up with solemn tramp; and Hastings walking airily into the sitting-room, saw before him an old and faithful servitor of his father's—a servitor so old that he had been pantry-boy in the great house at Dean when his present master was a boy at Eton.

'Why, Roberts, my good old boy,' said Hastings, shaking hands with him, 'what brings you to the brick and mortar wilderness? The girl said Mr Robins of Deal wanted to see me.'

'I told her to say it was Roberts from Dean, Mr Arthur,' said the old man solemnly.

'I am very glad,' said Hastings, looking with real pleasure at the white-haired, rosy, plump, old fellow's face—'very glad indeed you found me. I am just off for the continent.'

'You must come back with me, Mr Arthur,' said the old boy with a solemn shaky voice.

'Is there anything the matter at home?'

'It is appointed to all men, Mr Arthur,' said the ancient butler with a voice more and more tremulous. 'It's your poor father's turn, sir, now.'

Hastings sat down without an exclamation, and looked hard at his visitor.

'He wouldn't have any of us wire, sir,' said the old man, 'for fear of startling you. A letter wouldn't have reached you till the morning, and that might have been too late. So he said to me: "Go and bring him down, Roberts. I shall last till he comes," he said, sir; "I must last till he comes!"'

Hastings still said not a word, but rang the bell. The rosy housemaid answering stood astonished at the paleness of his countenance. He ordered refreshments to be placed before the butler, and then left him and went into the solitude of his own room. Standing there, and staring listlessly into the dark and silent street, he groped in his own mind for the meaning of the message which had just been brought to him. He turned his eyes vacantly upon the table near which he stood, and took thence a book in a yellow paper cover, and vacantly read a paragraph. This book was the production of a Frenchman of genius. I will not blame but pity that great personage, who was a godless, heartless, bloodless cynic, with a rollicking sense of humour which never found food for a smile in anything that was not either cruel or dirty. The paragraph which Hastings thus vacantly read set forth with jocund pleasantries the delight experienced by a young man at a wealthy father's death. As the meaning of the writer became clear to him, he tore the flimsy volume passionately in pieces and dropped them on the floor. The old

man tapped at the door, but Hastings did not hear him. He gazed gloomily out of the window on the dark street until the old servitor's touch aroused him. 'Roberts,' he said, with some bitterness at his heart, 'I declare I feel this almost as much as you do.'

'I know, Mr Arthur,' said the butler. 'There's different ways of feeling, and different ways of shewing it.'

'Is there no hope of his recovery?' Hastings asked, turning to the window.

'No hope at all, sir,' the butler answered.

'When does our train start?' Hastings asked again.

'I've told Hoskins to meet the Hetherton train, one hour and twenty minutes after midnight, sir,' the butler answered. 'It leaves Euston in about an hour and a half.'

'Very well,' said Hastings. 'Leave me alone for a minute or two, Roberts. Get something to eat. I shall be quite ready.'

The butler retired; and Hastings stared on vacantly through the window. 'Have I a heart at all?' he asked himself. 'I don't believe I care the toss up of a blind beggar's farthing. I don't believe it's in me to care; and if it isn't, it shall not be in me to pretend I care. Poor old governor! He'd have cared if he'd heard that I was dying.'

His heart was hardened, and his eyes were dry. He thought of things which were so ridiculous that he could have laughed outright at them. The great Frenchman himself could not have been inwardly wittier than poor Hastings, over all the cruelties of his own want of feeling. He could not help it for his life. He could not feel sorry. He did not feel sorry. He was never merrier than at this time; and just as he had arrived at this conclusion, he dropped his head into his hands and wept bitterly. He was a very young man, my readers will remember, and his father, who lay dying, had loved him well and forgiven him often. The faithful old servitor without, dropped tears into his tea as he sat there in his young Master's room, and heard the sobs which shook him.

The two mourners took the train together, and arrived too late. The old man was dead; and his son, that dissipated youngster, was master of Dean Manor and broad lands adjoining. Yet it was not these things which filled the heart which would have fain believed itself so flippant and cynical. No, no! He lay there, the gray old man, who would be grieved no more, yet had been grieved so often. Even cunning Antony cries out, 'My heart is in the coffin there with Caesar, and I must wait till it come back to me.' There was some nature there, or the mob would not have been moved by it. And so Hastings' heart lay there with the dead father, and had no concern with Dean Manor and broad lands adjoining, unless it were to fear in the sincerity of grief that these things would bring in time a consolation of which it would be an honest man's duty to feel ashamed. The will of the dead man was read after the funeral, and except for liberal legacies to the old servants, everything came into the hands of the son. He was free to go back now and use London like a hog-pen or other place to wallow in. He could give his vices that looked like virtues, and his virtues that looked like vices, full swing on such a princely income as his father had left him.

I would defy you to make a Square-toes of this young gentleman, but he is not past making an honest man of. The father's death sobered the son, and brought responsibilities upon him. The old fables are full of wisdom. Every man plays Hercules at one time or another, if it be but for an hour, and the two goddesses solicit him. Happy is he who plays the parable through to the end and chooses after Hercules his fashion. That better choice our young Hastings made. It was not in the heart of him to be a Pharisee. He will have his joke to the end of his life, and will not forget, though he grow wise, the flavours of Clos de Vougeot and Habana. There will be cakes and ale even for him who is pious, and ginger shall still be hot in the mouth.

But there is a time for all things, and this was the time for sober thought and honest resolution. He would play Prince Hal no more. Brookes and Bonder, Pains and Bardolph, and that hoary sinner Falstaff, who dwelt in the dingy parlour of the 'fancy' public, that battered hero of the fistic ring, should have seen the last of the Prince's revelry. To purge, to quit sack, and live cleanly—it is a holy task, and the young fellow who goes out to it will have all honest men's sympathy.

Hastings could not bear to closet himself with his dead father's lawyer directly after the old man had been laid beside his ancestors in the family vault. He felt that he could better give himself a little time for thought, and even a little time for grief, before he took up the burdens of his new position. And there seemed to him a something sordid in hastening to lay hands upon that which bore yet freshly the impress of a hand which could grasp earthly riches no more. Therefore he went up to London, and whilst old acquaintances read gleefully that the will was proved, and that the personalty was sworn under some quite exceptional number of thousands, he was living alone and thoughtful in his old London rooms. It happened on the night on which he returned to town that he thought of Frank, and took a cab to drive round to him. 'It was more than half my fault,' he thought to himself, 'that Fairholt fell into that man's hands. If he is in any trouble, I must help him out of it.'

And once more he found himself too late. Mr Fairholt had just gone out. Hastings then pencilled this brief note:

'DEAR FAIRHOLT—If you are in any trouble about Tasker, let me know. One word from me will quiet him. Yours always, A. H.'

This he folded and sealed, and having discharged his duty in that one matter, went home again. Cynical and flippant as he thought himself, his heart was very tender just then, and the look even of lifeless things reproached him. The walls that had heard his follies reproached him. He arose and went into the streets. It rained in a half-hearted drizzling way, and he felt lonely and troubled and dispirited. It mattered little to him whither he went, so that he could but walk off this fit of unusual depression, and he found himself almost before he knew it in the midst of all the light and bustle of Oxford Street. Turning thence into quieter ways, he wandered on until somebody fell against him with a shock, and drove his crape-bound hat over his eyes. He recovered himself, and saw a drunken Irishman, who offered fluent

apologies. 'For barrin' him,' the man was saying, 'there's not a creature in the world that oi'd lay a little finger on except in the way o' good-fellowship. Will ye take a dhrink? Just to shew there's no ill feelin'? Dew now!'

'No, thank you,' said Hastings, and walked on.

The man clung to him with repeated apologies and repeated hospitable offers. 'Well,' said his follower at last, 'I dar'n't go tew far away, lest oi should be missin' me friend. If ye won't, ye won't, me boy; an' so, good-night to ye.'

'Good-night,' Hastings answered; and the man turned back and lurched down the street. The rain had ceased, and Hastings stood folding his umbrella in dreamy mood, with a sad little laugh at the man's persistent attempt to drink with him. Suddenly, not fifty yards away, there arose a terrific hubbub, and wild cries for help. Towards Hastings, like a dart, ran a stout little figure with guttural yells of 'Murder!' Behind him, gaining at every stride, came the man who had said 'Good-night' only a minute or two before. What the meaning of the pursuit might be, Hastings had no power to divine. It seemed probable that it was a piece of drunken sport on the part of both men, for it was impossible that they should have had time to quarrel since the Irishman had left him. But the cruel blow which felled the fugitive was real enough, and so was the murderous knife that gleamed above his prostrate figure. Hastings was just in time to bring his umbrella down full swing upon the Irishman's wrist. The knife fell upon the pavement, and the umbrella-stick went to shivers. The man was up in a second, and rushed at Hastings like a bull. It was all uneven. Not half-a-dozen years of foolish living in London and Paris had robbed the prettiest boxer of his day at Cambridge of his style. The tale is as old as the hills. Hastings could not hurt the man severely even had he wished. But on the other hand, the man could not get near him, and his savage rushes were exhausting him and knocking him about a good deal. A gentleman came out of the house in front of which this little drama was enacting.

'Pray, oblige me by picking up this poor fellow,' said Hastings quietly, opposing the frantic Irishman with wary foot and hand and eye. 'I found this fellow trying to murder him. There's a knife somewhere.'

At the mention of the knife, the Irishman made a rush for the prostrate figure. Hastings dropped in front of him like lightning, and the man went flying over the stooping figure, came down heavily upon the pavement, and lay still. The whole thing had not lasted two minutes.

'Very neat indeed,' said the gentleman on the door-step; and at that moment a constable came with placid mien round the corner.

'Hillo!' said the official; 'move on here!—I beg pardon, sir. What's the matter?' Before the constable had well made this inquiry, the gentleman had left the door-step, and was bending over the figure of the portly little man who had been first to fall in this affray.

'Ha!' he said; 'this is my friend the money-lender, is it?—Help me to carry this man into the hall, policeman.' The policeman lent a pair of hands, and the figure of the portly little man was carried indoors. 'Now for the other.' At that

moment of time an elderly fat man came round the corner, and stood still to watch the proceedings. There was blood upon the whitened doorstep of the house into which the one man had been carried, and the two gentlemen and the policeman were stooping to raise the Irishman, who lay like one dead doubled against the area railings. The thing wore altogether a melodramatic aspect, and any elderly fat man passing at the time would have been phlegmatic indeed had he not paused to look. The fat man hovered round the three as they bore the insensible figure into the hall, and breathed stertorously in his eager interest. He followed to the door, and there fell into an attitude expressive of profound amazement. Nobody had noticed him, and it is not probable indeed that anybody so far had even seen him. There was a general start when he cried out aloud: 'Why, bless my heart alive if that ain't my man, Tasker!'

'You know him?' said the gentleman of the house, looking up for a second, and then busying himself about the insensible head again.

'Look here, policeman,' said Benjamin Hartley. 'You go for a doctor.'

The policeman smiled and whispered: 'This is Dr Brand, one of the most eminent surgeons of the day.'

'Ah!' said Mr Hartley, 'that's fort'nate.' Then he looked at Hastings. 'You seem to ha' been in this here shindy, young gentleman.'

'For once in a way,' responded he, shaken back into his old ways by the incident; 'fact and appearance travel together. I have been in this here shindy.'

'What's it all about?' asked Mr Hartley, regarding his new acquaintance with some surprise.

'I am really unable to say,' said Hastings calmly. 'The big man ran after the little one, knocked him down, and drew a knife.—By the way—turning to the officer—'you will find a knife and a hat outside. Will you oblige me?'—The policeman turned away to the door—'And an umbrella,' added Hastings.

'Was it you,' asked Mr Hartley, 'as doubled up that cove like that? Again' the railings?'

'I had to do it, you know,' said Hastings; and Benjamin Hartley stared at him, and wondered. He measured with his eye the figure of the prostrate Irishman, and then looked back at Hastings, with flaxen moustache and flaxen hair and girlishly delicate complexion. A deep-drawn breath and a slow exclamation 'Ah!' bore testimony to his amazement.

Dr Brand hearing this brief colloquy, chuckled within himself. Rising to his feet he said: 'This man is rather severely hurt. He ought to be removed to the hospital.' A slight examination of the second figure resulted in a similar verdict. 'I know the man too,' said the Doctor. 'His name is Closky, and he lives in Bolter's Rents in Oxford Street.' This was addressed to the officer, who had found the knife, and was now offering to Mr Hastings his battered properties.

'There is no danger, I hope?' said Hastings.

'It will not be possible to say anything about that in either case for a day or two,' the Doctor answered. The policeman was despatched for stretchers and bearers, and the two disabled men were soon deposited at the hospital. The Doctor

promised to call there in the morning; and he and Hastings and old Hartley solemnly exchanged cards. Then the old man went off with Hastings to the hospital to see that Tasker was well bestowed. The two took a cab, and so arrived some time before the wounded. Whilst they waited, the house-surgeon—who knew of Mr Hartley of Hartley Hall, and had heard of him from afar as a sort of Gentile Rothschild—was overwhelmingly polite, and the old gentleman was full of enthusiasms for Hastings' pluck and prowess. It reminded him—so he said with fatherly pride—of his son the Lieutenant when he was at Cambridge. 'Was that Hartley of Jesus?' asked Hastings. 'It was sir,' the old man answered, beaming. Did Hastings know the Lieutenant?—Hastings had that distinguished pleasure.

The old man referring to his card again, cried out: 'Why sir, you an' me's neighbours, if I ain't mistaken.'—Hastings assented.—'I shall be proud to see you, sir, at 'Artley 'All. My son the Lieutenant'll be at home at Christmas-time; and my son Orris Sinjin, of Jesus, Cambridge, also. May we look to see you there, sir? No fuss; no show, sir; but a very hearty welcome, I am sure.'

Hastings would be delighted. He liked the old man's bluff hearty ways, and his low-comedy gentility, and his innocent bounce and brag.

'Three generations, you know, sir,' said the old gentleman with hearty candour. 'That's the rule, sir. My young fellers don't make a bad show for the second. Two as fine young chaps as you'd wish to look at.' This to the house-surgeon, who nodded with some embarrassment.

The wounded men came in at this juncture, and the house-surgeon gave them the benefit of his skill without delay. He called Mr Hartley's attention to the fact that Tasker's jewelry seemed valuable. 'Yes,' said the old gentleman in answer; 'but he was in the habit of carrying about papers which were still more valuable, and it would be as well to make sure that they were taken due care of.' Saying this, he took hold of Tasker's coat and emptied the pockets. Amongst other things appeared a very fat pocket-book, the clasp of which was insecure. The book opened in the old man's hand, and a number of papers fell upon the floor. Hastings stooped and picked up some of them, one of which he crumpled in his hand, unseen, and held there.

'Hillo!' cried Mr Hartley; 'here's that cheque of mine, that he ought to ha' paid over a week ago.—I can't take this away with me; can I?' he asked the policeman, who stood beside him.

The official said that was impossible; and the old man, in a state of considerable excitement and anger, called for pen and ink, and producing a cheque-book, filled up a cheque in favour of Francis Fairholt, Esquire, for four hundred guineas. Hastings smoothed out the piece of crumpled paper he had held in his hand until now, and laid it before Mr Hartley. It was a bill for ninety-eight pounds ten shillings, two days overdue, payable at Lorder and Hobbes's Bank, Lombard Street, and drawn on Francis Fairholt by Aminadab Tasker.

'Hillo!' cried Mr Hartley again; 'this is a game!—Why, Mr Tasker,' he muttered in a lower voice, 'you've been a-detaining of my cheque for something, have you! Very well, sir—very well.'

'When you come round again, I'll have a little deal along of you, as you'll remember.'

'I knew of this, Mr Hartley,' said Hastings in a low tone, laying his finger on the bill, 'and I knew that Tasker held your cheque for Fairholt. Frank is my best friend, sir; and I went round to-night to tell him that he need not be troubled about this.' He laid his finger again upon the bill.

'Thank you, sir,' said the old man. 'I know that scoundrel, sir. I've told him long ago as if he had any more dealings with Mr Fairholt I'd break him. I'll go away at once to the poor lad's place and pay him this 'ere cheque. There's three days' grace allowed on this dockyment,' said Mr Hartley, 'as perhaps you know, Mr Hastings, and there's no danger till to-morrow.'

'May I come with you to Fairholt's place?' asked Hastings.

Hartley gave a ready assent; and they drove away together. The old gentleman swore as terribly as our army did in Flanders, and poured forth threats against the unconscious Tasker. He blamed himself for employing Tasker at all, but excused himself on the ground that 'there's allays a deal o' dirty work to do in business.' 'I shouldn't wonder,' he shouted, as the cab jolted over the stone pavements, 'if that feller as dropped on to him to-night wasn't somebody as he'd ruined.' Hastings shouted in return that this was very likely true; and Hartley lay back and muttered new threats and anathemas. They reached in due time the house in which Frank lived, and learned that he had not yet returned. Mr Hartley asked for an envelope, and inclosed the cheque with one line—'In payment for picture.—B. H.' Then he turned into the street, still very angry. 'I know what lads are like, sir,' he said. 'I've got two young chaps o' my own, an' one of 'em snuffered dreadful through this kind o' thing. And here's a 'igh-minded, sensitive young feller very likely a-breaking his heart through this scoundrel. Well, well, it'll be a warnin' to him maybe. All's well as ends well. He'll be all right to-morrow.—Shall I set you down anywhere, Mr Hastings?'

The two found that their ways were apart, and so bade each other good-night.

'I like that odd old fellow,' said Hastings to himself. 'He's new enough; but the new heraldry is hands and hearts. I shall look him up some day.' Then he fell to thinking of Frank, and made up an honest mind to give his old friend some good advice, and monetary help if need were, though that seemed unlikely. Frank was about to marry old Hartley's niece, and Hastings, like the rest of the world, knew that the builder and owner of Hartley Hall had a colossal fortune.

Mr Hartley also was preparing good advice for Frank, and was ready to offer monetary aid if need were. 'I must come down heavy on him,' the old man thought as he lay back in his cab, 'and frighten him out of these wicked ways.' There was no sin like carelessness in money matters, in Benjamin Hartley's eyes. Even dishonesty would have been little more reprobated by this good old heathen of a millionaire, for that did but shew a perversion of the most estimable of human instincts—the desire to be rich.

Whilst these two friends of his were pondering

that good advice and planning that monetary aid which were never to be given, Frank was standing in the night alone at the edge of Hampstead Heath. The wind moaned and the rain fell drearily. A rebellious rage against his evil fortune, a passion of regret for bygone follies, an unspeakable terror of the morrow, and through all these, such real dread of the grief which was coming upon those who loved him—rage, remorse, fear, and love—these four—did battle within his soul. And the wide heath, with the rain and the wind and the night upon it, lay before him like a threat of his own future, storm-tormented, untouched by any ray of light from earth or heaven.

#### A GERMAN FOREST VILLAGE.

Not far from the entrance to the Gottschlagthal, many miles from the railway that skirts the north-west of Baden, lies a secluded village. To this, its distance from a well-worn travellers' highway, it owes perhaps its chief charm—its reticence and silence, its pleasant old-world ways. One reaches it by a wide valley, from which the rounded, pine-crowned hills stand well away, leaving a sunlit breadth of grassy uplands, through which the river winds with murmurous singing. In the very heart of this greenness nestles Kappel, a village of two straggling streets, made gay on market-days with a gleam of scarlet petticoat and waistcoat, and lively with much guttural speech. But Kappel, spite its pleasant white wine, its deep crimson roses, its ruined castle perched far above it, or its houses—low-roofed and black-beamed, such as painters love—holds no charm for you, and you pass onwards up the narrowing valley, where the dark hills draw nearer to each other, and the stream flows between lessening margins.

It is never lonely, though one feels as if it led nowhere, this 'happy valley'; for to the right and to the left against the fringe of wood are perched snug homesteads with deep penthouse of golden-brown thatch, which almost conceals the narrow windows in which the marigolds and peonies are glowing, and with slopes of fragrant meadow-land in front, over which the summer wind shivers lightly. Now and then a peasant, a quaint figure in short-waisted coat of some shining black stuff, and red vest, is to be met, suiting his pace to that of his slow oxen; and he is sure to give you a *Guten Abend* as he looks at you with friendly curiosity. Then there is a level space of road when you limit your vision on one side to the straggling hedgerow, bearing a burden of all sweet things, and to the rapid flow of the impetuous river on the other; but in a little while there are signs of men again; for here is the saw-mill to drown the river's voice, and the farmhouse with its tangled garden and vine-covered trellis set against the road. Soon these too are left behind; and by a winding way, over whose very margin the pines fling their broad shadows, you wander on, having deep glimpses into the heart of the wide forest, that gained for this dark land in Caesar's time its name of *Silva Nigra*. And it is after all quite suddenly that you come upon the half-dozen irregular broad-eaved houses, standing a little apart from each other, that form the village you seek. An inn or two, which the peasants

frequent; the barber's shop, with its sign dangling above the door, and flowers in all the windows; the wide black forge, holding its glowing heart of fire; children at shrill-voiced play by the river; men and women who straighten bowed backs to look and exchange a friendly greeting as you pass—that is all. Then with a sharp bend to the left comes the narrow bridge that spans the wayward river, broken here into a hundred miniature cascades by the moss-grown boulders that impede its path; and while its voice is yet sounding in your ears, you have reached the *Gasthaus zum Ochsen*. Your pleasant pilgrimage is over, for this is its goal.

You stand a moment to look about you. In front of you lies the wide country, fair and still under the evening light. And yet it is a landscape made up of very homely elements. Sombre woods which climb and crown the hills, tinted here and there to a brighter green with the young growth of the spring; smiling slopes where the sunlight lingers; quiet homesteads where generations have lived out their simple uneventful lives, looking on the same upland pastures where the cattle feed, hearing the same rushing waters. Under the ample roofs the beehives stand in a row; oxen loosed from their yokes, pass under the wide archways; the thin blue thread of wood-smoke curls upwards and hangs in the still air. A little higher up the hill, beyond the pond which mirrors the placid sky, stands the little church, its white belfry clearly defined against the background of wood. You turn from it lingeringly to the low white house behind you, its many windows open to admit the evening freshness, and to the wide court where the pigeons plume themselves upon the sunny wall.

If former experience of hotel life has led you to expect and to desire the attendance of obsequious white-neckclothed waiters and smart chambermaids, then the *Ochsen* is no home for you. But if you care to abandon yourself for a little space to a life of very simple pleasures, among a people as yet unspoiled by contact with the outer world, then pass beneath the vine-covered porch. For come as you will, in hired carriage, in diligence, or on foot, you will find here a ready welcome. Mine host will advance to meet you, and reach a broad hand to clasp yours; his comely Frau awaits you on the threshold, and herself leads you to that pleasant chamber under the eaves, in at whose open casements comes the scent of the linden tassels. Sons and daughters of the house will anticipate with smiling readiness the wants which your stammering tongue refuses to translate for you. Here you may experience the rare and pleasant sensation of being received for your own sake, not for the amount of gold with which you may swell the landlord's coffer—a guest whom he delights to honour.

They wait upon you themselves, those handsome friendly young people, while you sup in the brown low-roofed room, adorned with gaily coloured prints of saints and martyrs. Between the courses, while you sip your glass of white wine, they will sit beside you and entertain you in kindly fashion. Very soon you are able to distinguish between Karl and Fritz, and have even a dim suspicion that other eyes than those of her brothers' have found out that Fräulein Gretchen

is very fair. Before your meal is ended, you will have had an outline of their uneventful history; and unless you have more than your share of English reticence, they will have learned something of yours. Presently, they will shew you the visitors' book, where among crabbed and twisted hieroglyphics which you cannot hope to decipher, you discover the signature of a former Smith or Brown who lodged here, and recorded his sentiments in British German; but the date is eight or ten years back, and out of the photograph of your fellow-countryman which Fräulein Grete brings you, there looks at you an unknown face.

If, while you lean back for a moment to enjoy your sense of comfort and well-being, your eyes stray to the dark corner where the old square piano stands, one of the bright faces near you will certainly kindle into sudden enthusiasm; and if you so will it, the rest of your evening may be spent in the rare company of Beethoven and Handel and Bach. As the quick firm touch falls upon the notes, the sweet strains seem to act as a magnet; for presently the host enters, cigar in mouth, and seats himself in the wooden arm-chair; the good Frau, the sleeves of her cotton jacket still rolled up, comes forth for a moment from the dark recesses of the kitchen; and about the open door there gathers a dim and shadowy company; stray passers on the highway perhaps, or the village folks who drop in of an evening to drink their half-bottle of red wine in the *Gaststube* across the passage. Sometimes it is Fräulein Grete who sings; and then the refrain of the *Volkslied* is unfailingly taken up by the outer listeners, and swells into a pleasant wave of melody. Time in this quiet place glides by to the sound of music. The hostler sings as he rubs down his horses; Fritz sets the coffee-cups to a refrain of Schubert's; you are awakened in the fresh early morning by the strains of a waltz which some one thumps out merrily in the guest-room beneath you. And as you rise and throw open your casement to let in the new brilliance of the day, you feel that the lines have fallen to you in pleasant places. Here, for a smaller sum than is spent upon a single meal in London, you may live from day to day upon the fat of the land. Your weekly bill is so modest that you discharge it almost with a sense of shame; it leaves you a debtor still for many kindnesses which gold cannot repay.

As you linger on beneath the lindens, you watch the slow procession of events that make up the daily life of this forest village. While you drink your coffee the school-children troop past, bright-eyed little lads and maidens, bare-headed, and for the most part bare-footed too, their quick tread falling almost noiselessly on the white road. With a slow creak come the ox-carts, burdened with a load of pine-logs; the blue-bloused peasant cracks his whip, and they cross the bridge at a quicker pace. From an upland meadow a woman drags a load of fresh-cut grass; the *Pastor* in his long flapping robes strides down the hill, and pauses a moment to lay his hand on the head of the child who clings to his skirts. Now and then, on Sunday or feast-day, there is a procession. At these times, when the bell in the little belfry set against the wood sends out its one thin note, the crowd begins to thicken on the white road. From the meadows by the river, from the heart of the forest, from distant houses hidden among

the hills, they come. There is a gleam of blue and purple and scarlet as they pass; the uplifted banners are stirred by the soft air, and the slow monotonous chant fills all the valley. Sometimes there is a sadder pilgrimage to the church on the verge of the wood, where stands a new coffin with lights burning about it, and thence to the sloping hillside, sown thick with little iron crosses, but lying very pleasantly to the sun. At eleven o'clock comes the great event of the day, when with a jingle of bells and a sudden crash of wheels, the diligence draws up before the door of the *Ochsen*. Then you may begin to speculate on the number of letters it has brought for you; or if these fail you, you glean news of the outer world through the pages of the *Kölnische Zeitung* which Fritz brings you. When your interest in German politics flags, you concentrate it on the new arrivals, who share with you the shade of the cloudy linden foliage, and are already clinking their beer-glasses.

You will find them very ready to be friendly, these young students from Carlsruhe, to whom the *Ochsen* is familiar ground. At the early dinner-table they will introduce themselves in manly fashion, stating name and occupation and dwelling-place; and then, if you will and dare, you may venture beyond the *Guten Appetit* and the *Gesegnete Mahlzeit* which it is incumbent on you to utter at the beginning and end of each meal. Often the diligence brings older travellers, who love the silent charm of this quiet valley; and with all of these you may have the pleasantest intercourse, for the 'intelligence' which won for the Fatherland its later distinctions on the battlefield leavens all classes of society in Germany.

When you tire of the talking—and certainly there is a great deal of it—you may wander out into the woods, of which you never weary. Under these straight trunks you pass from lavish sunshine to intensest shade, broken rarely by a gleam that travels down the gray stems and flickers on the moss. Here you may linger for hours and hear no sound but your own footfall, or the soft murmur of the wind far above you. Once and again you come upon signs of a charcoal-burner's deserted encampment; but if you would see the woodcutters at work, you must mount upwards by the winding forest-paths that lead to the crown of the hill. And having emerged from these green aisles and reached this freer air, you may well forget your sense of weariness; for here on all sides of you, like the billows of a frozen sea, rise the green-clad hills wave upon wave, black in the hollows, but emerald in the sunlight. The village lies at your feet warm and sheltered; and on the other side where the valley widens, there stretches in the far distance a wide reach of level land, which you know to be the fair plain of Alsace, but which in the noontide heat you dream to be a glistening summer sea, with islands and jutting shores and sailing ships.

And so with the June days you linger on in this pleasant land, where surely the sunsets are rosier and the day dawns fairer than elsewhere. On midsummer day they begin to cut the first crop of meadow-hay. It is a pretty sight to see the long ranks falling before the mower's scythe, though you grudge the death of the flowers, that made all the wayside a bright mosaic of blended colours. From this time you see less of your hosts, unless

you choose to take part in that busy scene by the river, where the women—bare armed and footed—toss the hay, while the men rake it together and fill the great wooden carts. A boy stands with a green branch in his hand to shield the patient cattle from the flies. Then when the last load is hoisted, and the ropes made fast, with many an oburgation, the team gets under way; the deep rutts are safely passed, and with a sigh of relief, the owner sees his wealth pass onwards to the great barn. When the last precious load is safely stored, and the workers are set free, you may join the young people in one of the many excursions with which they enliven the quiet days. Perhaps you scramble into the *Leiterwagen*, and are jostled merrily over the sunny roads to some other hidden village nestling among the woods, where *Grossvater* and *Grossmutter*, who have a *Wirthschaft* of their own, receive you with simple dignity, and set before you the best the house can offer.

You are familiar by this time with these peasant homes—the dark low-roofed rooms, with the polished wardrobe in one corner, and the stove with quaint Scripture scenes—the sacrifice of Isaac or the judgment of Solomon—represented on it in relief. You remember them all: the farmhouse high upon the hill, where you had many a draught of new milk out of a blue two-handled jar, and ate of black bread on which the housewife had first devoutly made the sign of the cross; the *Burgomeister's*, with the deep thatched eaves and the narrow windows, whence you had that fair prospect of climbing vineyards and distant wood. You remember them all, and think with regret that you have seen them and their simple kindly owners for perhaps the last time. For as the June days lessen one by one, you feel that you too must turn your steps from this quiet spot. With July and August will come grave professors and merry students, and households set free for a space from city life, and there will be dancing and merry-making in the guest-room of the *Ochsen*.

But you leave it as you found it, this your home of many weeks, full of a silent restful peace that will always cling about it in your memory. You turn away sadly from these new-old friends, who crowd about the door to wish you God-speed, and you climb the dusty way, leaving them behind. The orange light lies in long level bands between the dark hills; the woods are growing sombre-tinted; and as you turn for one last backward glance, the first star burns in the pale sky above you. Night has come o'er the forest village. *Au revoir*.

## THE BELLS OF YARRICK.

A PROSE IDYLL, IN THREE SCENES.

### SCENE III.

SURELY Yarrick looks at its best in autumn! Foregrounds of ruddy loam, which has turned over obedient to the gentle persuasion of the ploughshare, exhaling delicious perfume; middle distances of waving gold, which the whispering breezes move gently to receive the play of lights and shadows; backgrounds of stony gray, running off into tender green and shadowy purple where the heather spreads its carpet; in the far distance the gleam of the waters of Boardsey

dancing in the glinting sunlight; spanning all, the limpid azure canopy, flecked with clouds soft as snowflakes, and ever changing into new and beautiful combinations.

Martha Prout combines in her comfortable person two distinct offices; she ministers at the Vicarage as both cook and housekeeper. There being no culinary problems to engage her attention to-day, she sits under a great apple-tree in the orchard knitting stockings, and ever and anon gazing up with approbation at the branches bowing with their bountiful load. All the morning she has been making preparation for the return of the Vicar, who for the last two months has been sojourning abroad. This afternoon it is exceptionally warm, and as Martha sits in her comfortable wicker chair catching the sunshine straying through the network of boughs above, she nods over her stocking. Hard by, the pigeons coo amorously in the veranda of their elevated little residence. A lark, pouring out from its heart ecstatic melody, mounts upward into the azure concave. A great bumble-bee comes droning along through the air, aimlessly, after the fashion of its kind. 'I can't abide 'em!' Martha says, holding her head back in trepidation, and inspecting the insect through her spectacles; 'they den make a body's flesh creep! Al'ays did mine sin' I's a child.' Then, after a fitch or two, the melody of summer song is soother to her, and she half closes her eyes. She hears the voice of one far off singing over his hedging and ditching; the air is catching, and Martha, sleepily following it, feels personally affronted at the utterance of a false note. 'Bless the boy, what's he fit for! Lived i' Yarrick all's life, and can't sing, Pegwell Peggy yet!' The subject of the stricture comes to the end of his bar, and devotes his attention to his spade and bill-hook, and the musical critic is left in peace. Succumbing to the soothing influence of all around, Martha Prout slumbers.

Enters into the orchard a man, soldierly in bearing, dark brown of hue. One of the sleeves of his coat is doubled and stitched to the shoulder, the limb for which it was made being absent. He pauses for a moment, and looks about, then spying Martha, makes towards her. She, hearing a footstep, clutches convulsively at her knitting-needles, then recovers.

'How yeu den startle a body, Dennis!'

'Been havin' a snooze, Martha?' inquires Dennis amicably.

The aspersion ruffles Martha's plumage. 'No; I han't!' she replies. 'Reckon I know my place better! I've told yeu afore that we han't got none o' they Iujin ways i' Yarrick.' And she emphasises her sarcasm with a sniff.

'Don't yeu mind me, Martha,' says Dennis soothingly. 'I thought as 'twas warm-like, and yeu havin' al'ays been of a full habit o' body'—

This is more than mortal flesh can bear; and the outraged Martha rises majestically. 'Perhaps yeu'll 'scuse me pullin' yeu up short, Dennis Ladbroke, an' tellin' yeu that yeu an't no longer dwellin' among black infidels an' sich-like.' And Martha shakes out her skirt venomously, as though to draw attention to that emblem of civilisation.

'Why, bless the woman!'

'I would at least be civil-spoke, an' not use low words,' interrupts the exasperated handmaiden.

'Come, come, Martha; yeu mustn't take offence where none's meant. Ye needn't be so contrairy—to-day of all days too!'

Martha appears subdued. 'That's tren,' she says in a mollified tone. Dennis's reference has recalled her thoughts.

'Feel as though I can't stay still to-day, Martha; seems somehow to have been such a skurry at the last,' says Dennis, sitting down on a stump of wood. 'All's ready now,' he continues, stroking his chin thoughtfully. 'They tell me the new bells are sweeter-toned than the old, though that can't well be. The lads say they'll give Yarrick such a peal as it's never heard before.'

'La, Dennis! what a surprise 'twill be for the master! Reckon he'll feel main sadly, poor dear.'

'That's like enough, Martha.'

Dennis's thoughts stray back. 'Master Gerald thought of this day,' he says half aloud.

'Bless him!' says Martha softly; then adds, after a pause: 'I've been at they chairs all the mornin', an' they shine just beautiful; come an' see 'em, Dennis.' And they go in together.

'Miss Ella's often spoke of him sin' the news of his death came to us. How her pretty face will light up, to be sure!'

The two return to the orchard, and there Martha makes Dennis again tell her of the past. She never tires of listening to his accounts of all that has happened. Somehow the sight of that empty sleeve has touched her heart, and to her Dennis has become a hero.

Yes, Gerald's directions have been thus far faithfully carried out, and all is now prepared for their consummation. To-day, Yarrick is in a state of suppressed excitement; the villagers gather in knots to discuss the subject of which their minds are full, and make frequent pilgrimages to the church and the Vicarage. The nearest railway station lies nine miles distant, and the train which bears the Vicar and his little daughter is timed to arrive at seven o'clock. Harry Winn has been delegated to drive over and meet them, and he feels much as an ambassador charged with a delicate mission; has he not to keep from their ears the news of what has happened, and this for two long hours, when interrogations are like to be plentiful and varied? Feeling the weight of his responsibility, he restlessly paces the stable-yard for a full hour before starting-time, and there rehearses a sufficiency of replies to meet contingencies. The hour passes, the journey from Yarrick is accomplished, and Winn drives into the station-yard, where, during the ten minutes he has to wait, his trepidation increases. Finally the train glides up to the platform, and then does the eye of Jehu grow feverish, for he sees the Vicar and Ella alight and make towards him. Greeting takes place, the two mount and settle down, Robin responds to a flick of the whip, and the start is made. As they drive past the flying hedgerows to the music of clicking hoofs, the two feast their eyes on the old familiar spots, which reappear in quick succession, and occupy their tongues in passing comments of an exclamatory kind upon them. So all goes well. Winn's nervousness is not noticed; and with an indescribable sense of relief he feels that Yarrick is being neared.

'I should like to have a glimpse of the church in the fading light; wouldn't yeu, Sunbeam?'

'O yes, papa.'

'Drive round by the lower road, Winn.'

Harry is dumfounded; he pulls up Robin with a jerk, and gazes helplessly into the Vicar's face.

'The lower road,' the Vicar repeats, indicating the direction with a movement of the hand.

For a moment Harry's tongue cleaves to the roof of his mouth, then he rises to the occasion. 'But think o' Martha Prout, sir! She's a-dyin' to see Miss Ella.' The tone of sympathy is touching to hear.

The Vicar regards him in some surprise, but Ella comes to the rescue. 'Dear old Martha! She thinks the tea will spoil. Don't let us disappoint her, papa. She will let us out afterwards, if we do justice to it.'

The Vicar laughs softly. 'All right, Winn,' he says; 'drive home.' And Harry does so, feeling that his stratagem has succeeded.

As they drive through Yarrick, beaming smiles on every side from the villagers who are standing about greet their return. The Vicar has a kindly word for each. Noticing, after a time, the marked manner in which they stand and gaze, he turns to Winn and asks: 'Is the village holiday-making?'

Winn feels that so near home he can afford to take the question calmly. 'No; they ain't 'zactly holiday-making, sir,' he says; then he relapses, chuckling inwardly. There, sure enough, is Martha, waiting on the steps to welcome them. Ella bounds forward, and throws her arms about her neck. 'O Martha, we are so glad to get back home to you!' And the Vicar takes her hand kindly and says: 'That we are, Martha.' Chatting merrily the while, they enter the parlour, and sit down to the meal which Martha has prepared for them. There is a stillness in the air; the evening shadows have lengthened, and through the open window come harvest scents, wafted from the ricks. When the meal is nearly finished, Martha re-enters the room, and says demurely: 'Please sir, there's some un waiting as says he'd like to see you when you've done tea.'

'Who is it, Martha?'

The ambassadress smooths her apron, and says: 'Please sir, I an't to say.'

The fairy presiding at the tea-urn arrests the progress to her mouth of a slice of bread-and-butter; and the Vicar looks up bewildered. 'You are not to say?'

'No sir.'

'Well—a—shew him in, Martha.'

But, before Martha can turn, Dennis has entered. For a moment he pauses, a little overcome now that his mission is approaching so nearly to its completion. Martha quietly turns, and leaves the room unobserved; a minute later she has thrown her shawl over her head, and is speeding along towards the church. As she walks, the good soul wipes her eyes softly with her apron; the face of the lad whom she had tended and scolded and loved in the old days, comes back very vividly to her just now.

And as the light had fallen on the figure of the maimed soldier, the emotional little lady at the tea-urn had sprung up and run towards him. 'Is it really you, Denny?' she says.

The Vicar too has risen, and grasping his hand, is gazing earnestly into his face. 'We are right glad to see you back, Ladbrook. Welcome once more to Yarrick!'

And they lead him to a chair, and make much of him. Seated there by the oriel window, gazing out over the flower-garden to the familiar meadows, they listen to his words, making him begin at the very beginning, and recount his adventures step by step. And when he comes to speak of Cawnpore, his hearers know that he is about to tell of the death of him he loved so well. In homely language Denny paints the scene, and the Vicar's cheeks flush as he hears of that last gallant burst into the bristling bayonets. 'Brave lad!' he says, rising in his excitement. 'From the moment he spoke to me on that night when the belfry fell, I knew that he would do!' Then Denny tells of the discovery of the prostrate figure; and looking up, says that he is come to bear a message.

What is it that causes the Vicar to start suddenly to his feet; that causes his face for a moment to pale, and then sends the blood coursing back to his cheeks? Wafted to his ears on the perfume-laden air come the sweet sounds as of old, the melody he loves. As one dreaming, he turns slowly round to Dennis; the faithful fellow's head is bowed, and for a moment he cannot speak. When he regains his voice, he whispers huskily: 'Twas the last thing he said: "Tell the Vicar I thought of him listening to my bells!"'

By the tower of Yarrick church the ground slopes westward in a series of gentle undulations. Below, and skirting the churchyard, is a great belt of firs; and beyond these may be caught the gleam of the waters of Boardsey. On this spot there is a little monument, whose inscription simply tells how one Gerald Herrick fell fighting for his country in the trenches of Cawnpore. Here—most often when the sun is flushing the western sky with glory as it sinks to rest—two figures may be seen, tending the roses which cling so tenderly to the stone. The one, a fair-haired maiden, is she who was formerly known as Little Sunbeam; the other is the maimed soldier, Dennis Ladbrook.

#### SOME STRANGE AVOCATIONS.

STRANGE are the shifts to which humanity is sometimes put to earn the wherewithal to supply its daily needs; and many are the ways of getting a living not to be found catalogued in any known list of trades. Few are the ills to which flesh is heir for which a remedy or palliative may not be obtained, if one only knows where to seek it. For instance, what a medical witness lucidly described as a 'contusion of the integuments under the orbit, with extravasation of blood, and ecchymosis of the surrounding cellular tissue,' may now be so deftly manipulated as to defy observation, by having recourse to a professor of the art of doctoring black-eyes—an avocation recognised by Mr Dickens, in his Dictionary of London, wherein any one unfortunately afflicted with an accidental black-eye, but obliged at the same time to go into society, is advised to betake himself to a certain 'artist in black-eyes,' equal to concealing the most aggravated specimen at a cost of half-a-crown, or double that fee if the patient must be attended at home.

Said a witness under cross-examination: 'I am an Early-caller. I calls different tradesmen

at early hours, from one till half-past five in the morning, and that is how I get my living. I gets up between twelve and one; I goes to bed at six, and sleeps till the afternoon. I calls bakers between one and two—the bakers are the earliest of all. What sort of a living he made is not recorded. A pound a week, we should say, would be the outside figure, and to earn that he would need a couple of scores of customers. The early-caller's fee is well earned, since but for his intervention his clients would often lose a day's pay, if not be thrown out of work altogether, by failing to keep time.—Not so deserving of encouragement are the 'tup-pennies,' carrying on their vocation in those quarters of London where pawnbrokers and poor people abound. They are feminine intermediaries between the pawnbroker and folks anxious to raise a loan upon their belongings, who, rather than transact such business for themselves, are willing to pay twopence for every parcel conveyed to everybody's 'uncle' or redeemed from his clutches. These go-betweens, it is averred, also receive a quarterly commission from the tradesmen they favour with their patronage; and so, one way and another, contrive to make a comfortable living out of their neighbours' necessities.

Convinced that duplicated presents were burdensome and unprofitable possessions to newly married folks, a 'cute New Yorker hit upon the happy notion of relieving them of such superfluities; and success begetting imitation, there are now some half-dozen traders in the Empire City dealing in wedding-gifts; one limiting his dealings to china; another to silver and plated ware; while all is fish that comes to the net of a third, who keeps a large store ostensibly devoted to the sale of unredeemed pledges. Said this worthy to an inquiring gentleman: 'When a young couple belonging to good families get married, nine times out of ten they find themselves in possession of certain kinds of household stuff enough to last several generations. One bride, for instance, received eight pairs of opera-glasses; of course she did not want them all, and I bought five of them. When a marriage between two rich folks comes off, a list of the presents generally finds its way into the newspapers. I don't go to them as soon as they are married; they'd kick you out of the house if you went on such business for the first few weeks. You have to let them settle down to housekeeping, and find out for themselves how much useless stuff they have got; and even then, the wife generally objects to sell; but after seeing them a few times, they fall in with the idea, and are willing to sell what they don't want; and then a bargain is soon struck. Young married people seldom know the value of the presents they receive, and besides, they cost them nothing, so it is all profit to them.' And probably not far from all profit to the shrewd purchaser, who takes their superfluities off their hands on his own terms.

There are men in Paris, birds of a feather with the chiffonier, who go from hospital to hospital collecting the linseed plasters that have served the turn of doctor and patient; afterwards pressing the oil from the linseed, and disposing of the linen, after bleaching it, to the papermaker. Others make a couple of francs a day by collect-

ing old corks, which being cleaned and pared, fetch, it is said, half a franc per hundred. If this be so, it would be worth somebody's while to go cork-collecting in London and other large towns.

A lady-resident of the Faubourg St-Germain is credited with earning a good income by hatching red, black, and brown ants for pheasant preservers. One Parisian gets his living by breeding maggots out of the foul meats he buys of the chiffoniers, and fattening them up in tin boxes. Another breeds maggots for the special behoof of nightingales; and a third 'marchand d'asticots' boasts of selling between thirty and forty millions of worms every season for piscatorial purposes. He owns a great pit at Montmartre, wherein he keeps his store. Every day his scouts bring him fresh stock, for which he pays them from five to ten pence per pound, according to quality; reselling them to anglers at just double those rates, and clearing thereby something over three hundred pounds a year. No wonder he professes great fondness for his 'children,' as he calls them; although, like other fond fathers, he is ready enough to part with them when opportunity offers.

This curious avocation is not unknown in England. Some twelve years ago we are told, Mr Wells, a fishing-tackle maker of Nottingham, in order to insure a constant supply of bait for his customers, started a farm for the rearing of lobworms, cockspurs, ring-tailed braudlings, and other worms in demand among the disciples of Walton, who abound in the old lace town. To keep his farm stocked, men and boys go out at night collecting worms in the meadows and pastures; a moist warm night yielding from two to six thousand worms. As soon as they are brought in, they are placed in properly selected moss, field-moss for choice, to scour until they become little more than skin—freshly caught worms being too tender for the anglers to handle; while 'when a worm is properly educated, he is as tough as a bit of india-rubber, and behaves as a worm should do when put upon the hook.' When this condition is attained, the worms are packed in moss, and put up in light canvas bags for the market. This worm-merchant does not entirely depend upon the industry of his collectors, but breeds large quantities himself in his own garden: the component parts of his breeding-heap being a secret he not unnaturally keeps to himself.

Ludlow Street, a very unsavoury quarter in New York, is inhabited chiefly, if not wholly, by Poles; living in the smallest of tenements, and given to sharing their limited space with cats, dogs, ducks, and geese. They are the cat-meat—not cat's-meat—purveyors of the city, hunting the streets at night to capture stray cats for conversion into sausages. Three among them especially devote themselves to getting, feeding, and breeding cats for the table. Such cats as are captured by their 'boys,' are carefully sorted; those in good condition being slaughtered at once, while the others are relegated to large boxes, to be fed regularly with a fattening compound. Sometimes the animals are confined in a yard, the walls of which are smeared with something so obnoxious to puss that she will not cross it—a something for which town-gardeners here would give much to know the recipe. Our authority, who

visited a Ludlow Street cat-yard not long ago, says: 'It presented a most amusing spectacle. About a hundred cats of all sizes, colours, and ages were sleeping, eating, quarrelling, and cater-wauling; all grades being represented, from the handsome Angora and Maltese, to the homely back-yard Tom.' When considered fit for eating, the cats are disposed of to 'small butchers' who make a specialty of cat-sausage, and festoon their shop-windows with them; the delectable delicacies having a ready sale, which is ever increasing; those who indulge in them declaring cat-meat superior to any rabbit.

An advertisement in a New York journal offering coloured ladies instruction in French, music, and deportment, sent an inquisitive reporter in search of the advertiser, who proved to be a comely full-blooded negress, talking with the fluency of her kind, but with hardly a trace of negro dialect; thanks to having lived many years in the service of a Creole family in New Orleans, and mixing but little with her own race. Mrs Johnson owned her peculiar business was not so flourishing as it might be, but it was a growing one, and she did not doubt it would prove a paying one in good time; since there was no lack of coloured ladies emulous of the graces and accomplishments of their white sisters, and willing to pay two dollars for an hour's lesson in either branch. Her pupils, she said, 'took hold' of the piano readily enough, but did not care about learning French, being much more anxious to speak English, or 'United States' as she preferred calling it, like white folks. There was not much difficulty in teaching them how to walk, bow, and so on; but it took a deal of patient drilling to cure them of ignoring the *g* in words ending in *ing*, and of saying 'whar,' 'dar' and 'thar' instead of where and there; while it was especially difficult to teach them the niceties of emphasis and inflection. Nevertheless, she had 'taken the kinks, if not out of the hair, out of the tongue' of many a woman as black as herself, and achieved notable success with a pure negress from Alabama, who was so ashamed of her skin, and so convinced that no white person ever respected a black one, that she always wore a heavy veil when walking in the streets. Mrs Johnson's model pupil, however, was 'a light mulatto, as pretty a girl as you would meet in an hour's walk on Broadway; young, slender, and just as stylish as she can be,' whom her proud preceptress was ready to match against the daughter of any white millionaire for good manners.

Bone-collecting is not an avocation peculiar to the States, but there are nevertheless bone-collectors of various kinds. John-Chinaman, content enough to live and die far away from the land of his birth, has a decided objection to his bones remaining in alien earth. We understand that the Chinese guilds in California employ men to go all over the country, even to Oregon, and across the Sierra Nevada, to collect the bones of their compatriots, which, after being scraped, are carefully rolled in paper, labelled, and despatched to San Francisco, where they remain until enough are accumulated to load a vessel, when they are sent to Hong-Kong for final interment. Ships carrying such a cargo can carry nothing else; for when a vessel had a cargo partly of bones and partly of flour, grain, and the like, the eatables

were found unmarketable in China, because of a belief that gaseous emanations permeated them, or from sheer superstition.

The same rule apparently obtains wherever Chinamen go; for in a Melbourne newspaper we read: 'During the month, a party of Chinese, accompanied by a European, have been busily engaged visiting cemeteries in the country districts, exhuming the bones of deceased Chinamen, for the purpose of transmission to China. The bones, after exhumation, are carefully counted, to ascertain that none are absent, and are then tied up in parcels, labelled, and inclosed in boxes with a quantity of written papers and a pack of Chinese playing-cards. Incense and perfumed papers are kept burning during the ceremony. The number of skeletons which have been taken up is very great.'

How the collectors of Chinese bones are remunerated, is more than we know; if they are paid by results, it is to be hoped they are more honest in their dealings than certain contractors who, undertaking to exhume and re-inter the bodies of the Federal soldiers who fell before Petersburg and Richmond, at the rate of eight dollars a body, separated each corpse into four parts, placed each part in a coffin, and received four times their proper reward from the American government!

#### ASTONISHING THE NATIVES.

WHEREVER they go, the soldiers of a Highland regiment generally contrive to astonish the natives. As the famous Forty-second were marching early one morning through a Fantee village, the pipers struck up *Hey, Johnnie Cope*, bringing the people out of their huts in the utmost consternation, in the belief that the Ashantees were on them. As soon as they saw that their awakeners were men of another colour, the villagers sought closer acquaintanceship; but catching sight of the pipers, a stampede took place; and not the boldest among them ventured to come nigh again until the rear of the detachment was clear of the village. Then they followed at a respectful distance, and when the troops halted, the Fantees growing courageous, crowded round, the pipers being the centre of attraction, under the idea that they were officers of great dignity, and the pipes some mysterious instruments for the destruction of the Ashantees. They improvised a war-dance in honour of the bearers, much to the disgust of the pipe-major, who wanted to know 'what he was made a peep-show of for,' and contemptuously asked if they had never seen a kiltie before.

As a rule, Indians do not give such open expression to their feelings. A settler in the Far West giving a little dinner-party, invited thereto a few half-civilised Indians, who displayed a desire to 'go through' the bill of fare. A young chief after eyeing the mustard curiously for some time, helped himself to a good spoonful and swallowed it. He said nothing to betray his astonishment; but despite himself, the tears streamed down his cheeks. An aged chief sitting opposite asked what he was crying about, and was gravely informed he was thinking of his poor old father who died a short time ago. Presently the old fellow took a dip from the mustard-pot, and his

eyes likewise proved too weak or too strong for his will. Then his young friend, in a sympathising tone, inquired the cause of his grief. Said the beguiled one: 'I was thinking it was a pity you didn't die when your old father did.'

All too readily as the red man takes to fire-water, he cannot comprehend the paleface's taste for hot condiments. Naukum, a Plover Bay Indian in much request by ship-captains as an interpreter, was a fellow of unappeasable curiosity; but he made a point of never expressing surprise at anything. The first time he was inside the engine-room of a steamship, all Naukum said, after thoroughly examining his surroundings, was: 'Too muchee wheel; make man too muchee think.' But he was fated to be astonished once by having some pepper-sauce introduced into his food, and owned to having experienced a new sensation, and not liking it. 'Me stand good deal,' said he; 'but me no stand white man eat fire on his meat.'

Mr Whynper won the admiration of his Alaskan friends by the exhibition of a few of those amusing pyrotechnic toys termed Pharaoh's serpents. Sir Samuel Baker found a galvanic battery a sure source of astonishment in savagedom. At parting with Rot Jamar of Fatiko, the traveller placed the two handles of the apparatus in the hands of that potentate, which gave a shock, and sent him away surprised and delighted; and nothing pleased the king of Unyoro so much as witnessing the effect of electricity upon the members of his court and household, every one of whom was compelled to undergo the operation; Kanrasi insisting upon the operator putting the battery to its utmost power, and going into roars of laughter at the sight of his favourite minister rolling on his back in contortions, without the possibility of letting the torturing handles fall from his grasp.

The author of *Two Years in Fiji* found a scarifier (a kind of cupping-glass) of even greater service to himself, while yielding unbounded delight to the natives. 'Nothing,' he writes, 'was considered more witty by those in the secret than to place this apparently harmless instrument on the back of some unsuspecting native and touch the spring. In an instant twelve lancets would plunge into the swarthy flesh. Then would follow a long-drawn cry, scarcely audible amidst the peals of laughter from the by-standers. As soon as the native recovered from the alarm consequent on the suddenness of this attack, he would ask to have the application repeated perhaps six or seven times. The reason of this was not very evident at first; but I found by-and-by that the operation was considered a wholesome one, and also that the regularity of the marks left on the skin was much admired. At a time of great scarcity, when the natives refused to sell any food, I bethought myself of the scarifier; and by exacting a taro-root from each person who wished to be operated on, succeeded in collecting enough supplies to complete the journey.'

A missionary stationed at one of the South Sea Islands determined to give his residence a coat of whitewash. To obtain this in the absence of lime, coral was reduced to powder by burning. The natives watched the process of burning with interest, believing the coral was being cooked for them to eat. Next morning they beheld the missionary's cottage glittering in

the rising sun white as snow. They danced, they sang, they screamed with joy. The whole island was in commotion. Whitewash became the rage. Happy was the coquette who could enhance her charms by a daub of the white brush. Contentions arose. One party urged their superior rank; another obtained possession of the brush, and valiantly held it against all comers; a third tried to upset the tub to obtain some of the precious cosmetic. To quiet the hubbub, more whitewash was made; and in a week not a hut, a domestic utensil, a war-club, or a garment but was as white as snow; not an inhabitant but had a skin painted with grotesque figures; not a pig that was not whitened; and even mothers might be seen in every direction capering joyously, and yelling with delight at the superior beauty of their whitewashed babies.

### THE ELECTRIC VACUUM TUBE.

THE attention recently directed towards electric illumination has brought again into notice some of the earlier discoveries in connection with this science. One of the most beautiful of these is to be seen in what is termed the vacuum tube. The illuminating power of the electric current in a rarefied atmosphere has been investigated by Grove, Gassiot, Plücher, &c., their labours being much helped by the handiwork of Geissler of Bonn, who carried the art of glass-blowing for philosophical instruments to high perfection. Vacuum apparatus for electrical purposes are now known all over the world as *Geissler's tubes*.

These tubes have at each end a small piece of platinum wire fused into the glass, with a protruding loop of wire outside, so that they may be readily connected with the source of electricity; the air in the closed tube is then exhausted by an aperture made for that purpose, which is afterwards hermetically sealed. Upon connecting the platinum wires with the poles of an intensity coil, the whole interior of the tube is illuminated with a beautiful pink-purple glow, deepening into a rich violet towards the negative pole; whilst the wires throw off minute sparks entirely different in appearance from the well-known blue spark.

As the only absolute requisite in the construction of these tubes is the exclusion of atmospheric air, an infinite variety of forms has been devised. Names may be made of twisted glass, which will burst into light when connected with the coil; and minute traces of different gases, organic and inorganic, will give varying colours under the electric current.

Gassiot's Cascade is composed of a cylinder inclosing a slender vase of uranium glass, having the tube conveying the current descending to nearly the bottom of the vase. As there is no other exit provided for it, the current ascends the sides of the vase, and pours over its edge in a continuous flow of living fire, until it reaches the opposite pole. The beauty of this experiment is enhanced by the fluorescence of the uranium glass

of which the vase is made, under the light from the current.

Another adaptation of electricity inseparably associated with the name of Gassiot, is the electric star. The impression of light remains on the retina for about the one-eighth of a second—a phenomenon commonly known as persistence of vision. A single tube is mounted upon a magnetic rotator, and put in connection with the intensity coil. As the machine revolves, the illuminated tube, through multiplication of impressions upon the retina, becomes a glowing wheel with numberless radiant spokes. Properly conducted, the foregoing experiments are strikingly beautiful.

#### TO MY CANARY.

HALF Nature and half Art art thou,  
Poor city bird ;  
Thy birth was not on woodland bough  
With zephyrs stirred.

A little box upon a nail  
Thy life received ;  
And I, when others' care did fail,  
Thy wants relieved.

The melody that rippling breaks  
From thy clear throat  
Was not thine own—the skylark makes  
That merry note.

The greater world without thine own  
Is dark to thee ;  
Thy golden wings have never known  
Its mystery.

The sun on thee, through cloudless sky,  
Did never smile ;  
Dull bricks and mortar have been thy  
Canary Isle.

But if for freedom thou dost sigh,  
My captive pet,  
I'll loose thy wings, and help thee fly  
This cage of fret.

And then, thy airy soul, upflung  
Towards heaven's gate,  
Will sing the song, as yet unsung  
Emancipate !

Say, wilt thou fly the spreading air  
At thy sweet will,  
And never more in captive's fare  
Dip thy free bill ?

If so, just chirp one last farewell,  
And hie thee hence,  
And leave me, till passed time dispel  
This present tense.

See ! now I throw thy cage-door wide,  
And set thee free.  
Stretch forth thy wings, in conscious pride  
Of liberty.

Thy hops do halt, as if delayed  
By fearful doubt.  
Why hesitant ? why so dismayed  
To know you're out ?

Hast thou no wish to seek near brooks  
Cool shimmering shade ?  
Or dost thou still prefer the nooks  
By joiner made ?

Thy years of caged ease have brought  
Such days of dreams,  
That liberty with labour fraught  
Worse bondage seems.

Thou dar'st not go ! the wide outside  
Brings thee dismay ;  
The airs that thrill the lark's life-tide  
Thy pulses stay.

Then come, my sweet, and safe from harm  
Securely rest,  
And nestling in my bosom, calm  
Thy fluttering breast.

And to this cage, with memories fond,  
Thy voice recall,  
And love shall knit its tenderest bond  
In willing thrall.

P. F.

#### CELLULOID.

A mixture of tissue-paper and camphor chemically treated produces a substance known as celluloid, which is largely manufactured and applied to an always increasing variety of uses. It resembles gum in appearance, is of a light pale brown colour, and can be readily dyed through its whole substance, so as to imitate amber, malachite, tortoise-shell, or coral. When converted into artificial ivory, there is, to an ordinary eye, no difference between it and the real product, and it can be used for pianoforte keys, for handles, rings, ornaments, and so forth, as readily as real ivory, at one-half of the cost. It is convertible into combs, jewelry, watch-cases, thimbles, toe-caps for shoes, parchment, said to be more serviceable for drumheads than real parchment, and into paper, which is afterwards fashioned on an enormous scale into cuffs, collars, and shirt fronts ; and attempts are being made to adapt it for use as neckties.

The Conductors of CHAMBERS'S JOURNAL beg to direct the attention of CONTRIBUTORS to the following notice :

- 1st. All communications should be addressed to the 'Editor, 339 High Street, Edinburgh.'
- 2d. To insure return in case of ineligibility, postage-stamps should accompany every manuscript.
- 3d. MANUSCRIPTS should bear the author's full *Christian* name, surname, and address, legibly written ; and should be written on one side of the leaf only.
- 4th. Poetical offerings should be accompanied by an envelope, stamped and directed.

*Unless Contributors comply with the above rules, the Editor cannot undertake to return ineligible papers.*

## THE GAMEKEEPER AT HOME.

WITH the advent of spring come the myriad pleasing sights and sounds of reviving nature. Beneath the sparkling sunlight of an April day, hill and valley, wood and wild, assume attractions which captivate alike the eye of the naturalist, the artist, and the poet. The spots which but a few weeks ago seemed so barren and desolate, are now instinct with the fresh beauty of returning life. The tender green of the grass, the soft blue of the sky, the sweet-voiced choristers in the budding grove, denote that winter is past, and the time of the singing of birds is come. Now it is that forest and field have their attractions. The dark pine that during all the winter months kept up a brave show of summer garniture, is now edged with a fringe of brighter green; while the chestnut that waved naked arms against the wintry sky, is rich with the glossy grandeur of its innumerable buds. The birch is preparing itself once more to hang out green tresses to the summer sun; and the thrush that sits on the topmost bough is telling its tale of love to all the valley. Along the woodland glade the turf feels soft and springy beneath the feet; and wherever some little water-spring oozes forth, delicate mosses mark its course with their delicious green. A new activity seems to have entered the life of the multitudinous fauna of the forest, and the ear is never oppressed nor the eye wearied with the thousand manifestations of their spring-tide joy.

As a charming companion for these and the summer months, we can scarcely name a pleasanter book than *The Gamekeeper at Home* (London: Smith, Elder, & Co.). It is an unacknowledged production, but is known to be from the pen of Mr Richard Jefferies, author of the recently-published *Greene Ferne Farm*; and *Wild Life in a Southern County*, which we had the pleasure of reviewing last year. The title very inadequately conveys to the reader the full scope and richness of the book; for it is by no means confined to a mere narration of the habits and pursuits of the gamekeeper, but passes 'from the man

to the territories over which he bears sway—the meadows, woods, and streams; and to his subjects, their furred and feathered inhabitants.' Yet very pleasant and picturesque is the author's description of the occupation and abode of the gamekeeper—his cottage in the ash-wood on the slope—his kennels, with all their noisy tenants—his ferret-hutches, his twine and rabbit nets, his man-traps and spring-guns. The latter antiquated engines are now illegal, and consequently lie in a corner neglected and covered with rust; but 'the keeper will tell you that the man-trap used to be set up in the corner of the gardens and orchard belonging to the great house, and which, in the pre-policeman days, were almost nightly robbed. He recollects but one old man—a mole-catcher—who actually had experienced in his youth the sensation of being caught; he went lame on one foot, the sinews having been cut or divided. The trap could be chained to its place if desired; but as a matter of fact, a chain was unnecessary, for no man could possibly drag this torturing clog along.'

What may be called the personality of the gamekeeper, is sketched with a graphic power not destitute of humour. The tall and stout, yet slightly stooping form; the velveteen coat, glazed at the shoulder and sleeve where the gun rubs; the dog-whistle at his button-hole; his pocket-knife, which is a basket of tools in itself; his gun, which he loves as an old companion, and the balance and 'hang' of which he is so accustomed to, that he never thinks of aiming—'he simply looks at the object, still or moving, throws the gun up from the hollow of his arm, and instantly pulls the trigger, staying not a second to glance along the barrel.' He is perfectly civil to every one; and with a willing manner towards his master and his master's guests, he yet has a wonderful knack of getting his own way. Great on dogs, his opinion is listened to and taken by everybody, and by this knowledge many 'tips' are gained. At the farmhouse he is invited to sit down and take a glass, for his gossip is welcome, and his favour is always worth cultivating. He is proud

of his occupation, and delights in the woods and the fresh air. He thinks the smell of the earth a fine thing, and the hedges and grass 'as sweet as sugar,' after a shower. If a man asks him to take a glass of ale he never says 'No;' and when gentlemen give him 'tips,' he is 'much obliged,' and takes them home to his 'missus.' He is not afraid of wet weather, for he does not regard it; and a greatcoat he scouts as a thing of nought. He has likewise his faults. Towards his undermen, and the labourers and woodmen who transgress his rules, he shews a hasty temper, and is apt to use his ground-ash stick rather freely, without thought of consequences. When he takes a dislike to a man, nothing will remove it; his hatred is cordial, and he is full of prejudices. Conservative in his ways of thinking, the impressions of his youth are strong within him, and he looks with contempt on everything which diverges from his early-formed habits and methods. Yet he never gets sour of life. The 'tips' that are forthcoming from picnic parties who frequent his grounds in summer, and from the young gentlemen who have a turn at ferreting rabbits with him in winter, add a certain softening element to his surroundings; and as he is proud of his cottage, of his wife, of his family, of his gun, and of his dogs, he is on the whole as comfortable and happy as may be.

But the author takes us with his gamekeeper into the fields and the forest, and here it is perhaps that the general reader finds most to charm and please. We must here let the author speak for himself. 'The beauty of the park consists in its "breadth," as an artist would say—the meadows with their green frames of hedges are cabinet pictures, lovely, but small; this is life-size, a broad cartoon from the hand of Nature. The sward rises and rolls along in undulations like the slow heaves of an ocean wave. Besides the elms, there is a noble avenue of limes, and great oaks scattered here and there, under whose ample shade the cattle repose in the heat of the day. In summer, from out the leafy chambers of the limes there falls the pleasant sound of bees innumerable, the voice of whose trembling wings lulls the listening ear as the drowsy sunshine lulls the eyelid. . . It is difficult to decide at what time of the year the park is in its glory. The May-flower on the great hawthorn trees in spring may perhaps claim the pre-eminence, filling the soft breeze with exquisite odour. The May-bloom, pure white in its full splendour, takes a dull reddish tinge as it fades, when a sudden shake will bring it down in showers.'

Nor would this description of 'the park' be complete without a reference to the variety of birds and animals that have their local name and habitation there. We have the honey-bee and the wasp, making melody high up in the lime-tree branches; and the humble-bee close to the earth, buzzing slowly along under the arch of brier and bramble. The wood-pigeons are 'cooing' in the tall horse-chestnuts; and the blackbird, thrush, and finches are making merry in the hedges. The lonely missel-thrush haunts the

solitary trees in the park; and in the broken wall of the park the tiny tomtit creeps in between the stones and builds his nest. Here the partridges roost on the ground, keeping clear of the dikes and hedges for fear of weasels and rats; and there the lordly pheasant steps out into the grass, ready with discordant whirr, if alarmed, to seek the shelter of the neighbouring trees. The rabbits slip down from the edge of the wood to nibble at the dainty pasture, prepared to whisk back out of sight at the lifting of a finger; and in the evening the fox steals slyly out from the cover, 'wending his way down into the meadows, where he will follow the furrows along their course, mousing as he goes.'

Along with these picturesque touches of the habits and habitats of the wild animals, we have many anecdotes of the domesticated kind, especially of the dog. 'Some dogs,' says the author, 'possess an initiating power—which in men is called originality, invention, discovery—they make experiments. I had a pointer that exhibited this faculty in a curious manner. She was weakly when young, and for that reason, together with other circumstances, was never properly trained—a fact that may perhaps have prevented her "mind" from congealing into the stolidity of routine. She became an outdoor pet, and followed at heel everywhere. One day some ponds were netted, and of the fish taken, a few chanced to be placed in a great stone trough from which cattle drank in the yard. Some time afterwards, the trough being foul, the fish—they were roach, tench, perch, and one small jack—were removed to a shallow tub while it was being cleansed. In this tub, being scarcely a foot deep, though broad, the fish were, of course, distinctly visible, and at once became an object of the most intense interest to the pointer. She would not leave it, but stood watching every motion of the fish, with her head now on one side, now on the other. There she must have remained some hours; and was found at last in the act of removing them one by one, and laying them softly, quite unhurt, on the grass. I put them back into the water, and waited to see the result. She took a good look, and then plunged her nose right under the surface and half-way up the neck, completely submerging the head, and in that position groped about on the bottom till a fish came in contact with her mouth, and was instantly snatched out. The head must have been under water each time nearly a minute, feeling for the fish. One by one she drew them out and placed them on the ground, till only the jack remained. He puzzled her, darting away swift as an arrow, and seeming to anticipate the enemy. But after a time he too was captured.' When the fish were returned to the tub, the pointer again commenced her fishing. 'Scarcely anything,' adds the writer, 'could be imagined apparently more opposite to the hereditary intelligence of a pointer than this; and certainly no one attempted to teach her, neither did she do it for food. It was an original motive of her own. To what can it be compared but mind proceeding by experiment?'

In the course of the work, many interesting accounts are given of the habits and peculiarities of the wild animals of the country—hares, rabbits, foxes, badgers, &c.; also of the means of trapping and hunting such creatures. The wood-cut illustrations, by Charles Whymper, are many of them

charming, and add much to the beauty and utility of the work as a companion-book for the sportsman and naturalist. Its pictures of country life are full of animation; and the descriptions have about them a breeziness and buoyancy which recall even in the study, the scent of the hedgerows and the sights and sounds of rural felicity.

## A LIFE'S ATONEMENT.

### CHAPTER XVI.—AUTOBIOGRAPHY.

*I rolled this trophy up carefully.*

It was about the time of my installation at Hartley Hall that I began to be conscious of a feeling which I have since regarded with some amusement. I began to feel most marvellously old. My experiences of the world seemed to have been so varied that to my own mind I was another Gil Blas or Roderick Random. And I quite seriously believe now that a certain instability, a certain taste for wandering and love of change which mark me as a man, had their natural growth in the kaleidoscopic changes of my early life. When I was in bed and alone, I used to repeat to myself a line of a favourite hymn of Sally's, with a sense of the uncertainty of things in general, which but few children of my age could have arrived at, born of those changeful experiences—'I'm no abiding city here.' To my novel-reading childhood it seemed natural that aunts and uncles should turn up in a random sort of way, and bring abrupt changes into life; and I was so used to the marvellous, that if Uncle Ben had turned into a magician who traded new lamps for old ones, and had carried his own Hall and Park into Central Africa, I should have been inclined to accept it as a fulfilment of the prophecies of my little library. I find that usage has betrayed me. 'Uncle Ben.' Mr Hartley was not Mr Hartley long. I had not been a week in that rawly-splendid mansion before the red-faced bald-headed old gentleman was my closest chum, and had assumed by his own desire that title. He loaded me with silver money, and bought a pony for my use; and though I had no occasion to spend a penny and no opportunity, it seemed to afford him the greatest pleasure to chink four or five new half-crowns together, and approaching me with a look of sly jollity, to slip them into my pockets one by one, with many pretences of doing it, between, as though the whole performance were an elaborate conjuring trick. I had grown so rapidly during my fever, that I used sometimes to stand up and look at my own toes with a sense of distance from them such as no mature person twice my height ever experienced. But in spite of this, the pony's rotund girth was something too much for my small legs; and for a long time I sat him with a very precarious balance and a general sense of insecurity. Uncle Ben used generally to walk beside me, and not infrequently Maud would take the bridle on the other hand, and so we three would ramble slowly through the park together, one of us in a state of nervous transport, and unwitting of the troubles of those who walked beside him. One day when the grass was crisp with the first frost of winter, and the brown leaves dropped from the trees without a breath of air to shake them, as though they released themselves of their own will, Uncle Ben and I went

out together. Maud was about to join us; but he waved her back, and following her, said something, in answer to which she nodded sadly.

When he had led me some distance through the park, my companion looked up at me and said: 'Johnny, my lad, Sally's a-going down home to see her mother. Should you like to go with her?'

'Yes; indeed I should,' I answered; and hoped that nothing was wrong in Sally's affairs.

'No, Johnny,' said Uncle Ben; 'theer's nothin' wrong. While you're theer, Johnny, if Sally asks you to shew her'— There he stopped in his speech and his walk, and arrested the pony. He looked thoughtfully at me, and then laughing at my puzzled face, touched me on the cheek, and said: 'Never mind that now. When Sally asks you anythin', why then it'll be time enough to answer—won't it?'

I said I supposed it would; and he turned the pony's head round, though we had not been out a quarter of the common time, led me back to the front of the house, lifted me down without a word, and left me standing at the door. I had not been there long, when Hawker—the splendour in the canary-coloured plush and sky-blue coat, whom I had seen on my first visit, and had since grown familiar with—came to me and informed me that I was wanted in the morning-room. Thither I went, and found Maud, who told me that Sally was going to start in an hour from then, and that she was expected to return, bringing me with her in two or three days' time at farthest. Somehow, there was a reservation in her manner—children are quick to read such things—as if she desired to say something and yet would not say it. I had seen something of the same sort in Uncle Ben. When Sally came, there was an air of mystery about her of an almost melodramatic cast, and she palpably dissembled, like one behind the foot-lights. She wore so absurd a pretence of being in her usual humour, that I was quite alarmed at it. Whilst the groom drove us to the railway station, I revolved the problem in my mind, and was persuaded before we got to the train that some new change of life was in store for me. I did not believe that Uncle Ben had tired of protecting me, for he had worn his most genial and affectionate look at parting, and had studded me all over with new half-crowns, setting me on my back on the sofa in order to do it, and laughing at me jollily the while. I was sure of Maud also; and as for Sally, I was as convinced then as I am now that that good creature would be a consenting party to nothing which would harm me; and yet I felt persuaded that something new was about to befall me by the consent of all of them, and was in a nervous tremor to know what the something could be. I asked no questions, and Sally went on with her pretence of there being nothing the matter with as much success as any bandit who ever ostentatiously hid himself upon the boards.

The great manufacturing town lifted its chimneys into the pall of smoke which they themselves created, and its streets had the old roll and clamour and bustle. Sally took me into a great confectioner's shop there, and gave me cakes and tea, and was very deferential to the waitress who attended us. I was a little awed also, remembering distinctly the petticoated figure who stood so strangely for me in memory, and who had first

seen the place, and thought what a palace it was a year ago. I was very smartly dressed now, and booted and gloved in the nattiest way, so that I rather pitied that little figure. But I could not dissociate him from myself, and felt that I laboured under his special disabilities. The mistress of the establishment, a motherly-looking old lady who rustled her black silks with an air of great importance, came over and asked Sally whose little boy that was. Sally responded respectfully. It was the only son of Mr John Campbell of the Baker's Green Ironworks. The old lady looked quite gently towards me, and said in a whisper that in that case I was an orphan.

'Yes,' said Sally.

'Who was he living with?' the old lady asked again.

'He was livin' along of his Uncle, ma'am,' Sally answered, 'at Hartley Hall.'

'Mr Benjamin Hartley?' said the old lady—'the great millionaire?'

Sally answered in the affirmative.

The old lady, after taking a long look at me over Sally's head, went away again; and I heard her whisper to one of the waitresses behind the long marble counter that I was the nephew of Mr Hartley of Hartley Park, the great millionaire; and this whisper going round to all the marble-topped tables, I became conscious that I was being made a show of, so that I blundered with my tea, and had no idea as to what I ought to do with my eyes and hands.

Sally was a little discomfited by this general inspection also; and when at last we rose to go, and I produced a big-clasped Russia-leather purse, which Uncle Ben had given me that morning to hold the new half-crowns in, the general public of the place was painfully interested in this glimpse at a portion of the great millionaire's money, and I was very glad to escape with Sally to the street.

The dusk had fallen when we got to the railway station again in time to meet the train, which bore us to my native place. There was only one old gentleman in the second-class carriage in which we rode, and he was looking out of the window. I suppose that I spoke louder than I had intended, for when I asked Sally what a millionaire was, he looked round.

Sally not being especially ready at dictionary definitions, responded: 'Why, your Uncle's a millionaire, my darling.'

The old gentleman turned round so sharply again that he knocked his hat off. 'Is that young Master—er—er—Master?'—He snapped his fingers impatiently, as if he had forgotten a familiar name.

'Master Campbell, sir,' said Sally, helping him out.

'To be sure,' said the old gentleman—'Master Campbell. He's the nephew of—er—er, dear me!—he's the nephew of—er—'—The old gentleman snapped his fingers again, as if he had forgotten a familiar name.

'Mr Hartley, sir, of Hartley Hall,' said Sally, helping him out again.

'Of course,' said the old gentleman. 'Bless my soul; yes, of course! Dear me!' He put on a pair of glasses to look at me, and again I felt disconcerted, and had trouble with my roving eyes and hands. We got out at the same station, and the old gentleman seized an official in a gold-

bound hat upon the platform and pointed me out to him triumphantly as though I were a marvellous curio. 'That's the nephew of the great millionaire, Hartley of Hartley Park, you know.'

The official person came forward, and stooped down at the door which led from the platform, and stared at me under pretence of asking me for my ticket, and I felt that I was an impostor, and was making some pretensions—I did not know how—to something that did not belong to me.

Outside the station, Sally commanded a fly, and we drove away through the familiar streets in which the same dull gas-lamps gleamed, and the same people went to and fro as of old. They were all the same, streets and people and shops, except that a tinman had opened a new establishment with plate-glass windows, in which the bright tin-ware glistened like silver. This one alteration made the whole place seem new and strange in the midst of all its familiarities. We were not long in reaching the rough and broken road in which the cottage stood. Looking from the windows of the fly, I could see the mounds of slag and cinder which lay solemnly, like real hills, behind it, when the driver halted and got down, and said he could drive no farther, because there was what he called 'a crowning sin' in front of us. By this we both understood him to mean a crowning-in. The land had given way and had fallen into the hollow left by some disused coal-mine—had *crowned-in* the country-people say—an occurrence by no means uncommon in the district. I had often gone to look at places where such landslips had occurred, creating great rugged gaps which looked like Alpine valleys to my childish eyes. The driver said he knew the way round, and for an extra fourpence undertook to pilot us and carry the portmanteau. We went cautiously in the darkness, and the lowering sky looked bare to me where some old trees had stood when I knew the scene so well. When we came to the cottage, it was made evident that our arrival had been expected. Sally's mother had spread upon the table a clean white cloth, which I knew by old experience to be reserved for occasions of high ceremony; and crockery-ware for three was laid upon it. The wrinkled old woman in her black stuff dress, her apron of blue check, and her white cap, ran up the steps from the kitchen, and hugged Sally and kissed her and cried over her.

'You'll ha' lots o' time for that sort o' game inside,' the driver suggested, deriding sentiment. 'Gi' me my ha'pence, an' I'll toddle.'

Nobody taking immediate notice of the driver, he walked into the kitchen with the portmanteau, lit his pipe at the fire, and looked at us all three with an aspect of benevolent interest, until Sally remembered him, and paid him out of the Russia-leather purse, when he regarded his money with deep scorn, and took his way dejectedly. Old Mrs Troman depressed me at first by courtesying to me and treating me as a visitor of high importance; but her disposition to regard me in that light wore off by-and-by, and we fell into the old ways, sitting by the fire, she and Sally talking, and I keeping my own fancies in wandering company, or listening, as I chose.

It was still plain to me that Sally had something on her mind, which she strove to disguise;

and when her mother said to her suddenly after a lapse of silence: 'An' now tell us what you come down for,' my faithful servitor's assumption of having had no special purpose was the greatest failure in the way of private theatricals which I can remember. Conscious of the defeat of her purpose, Sally roused herself, and hustled me off to bed with a great air of kindly authority. I lay in the old room and seemed to slip back into the old life again, though with a sense that it was all narrower and smaller than it had once seemed to be. It came back completely and without that reservation in my dreams, but the room looked very bare and small and poor in the morning, though I felt myself in some indistinct way ungrateful when I thought so. It was only gray daylight when I awoke, but I got out of bed and dressed myself, and then looked out of the window from which I could only see the corner of the crowning-in. Naturally interested in that phenomenon, I ventured down-stairs, and after a struggle, succeeded in opening the back-door, through which I gained the road, and in a minute came upon the edge of the landslip. It was far deeper and wider than is common in such cases. It often happens that the earth sinks so gradually, that what was a gentle hill becomes a gentle hollow without the visible breaking of one clod of earth; but in this instance the road and the field on each side of it had gone suddenly, carrying the hedges clean out of sight, and leaving the trees I had missed the night before head-downwards, with their roots sticking out forlornly from the broken soil like helpless arms. Here was an opportunity for exploration which no boy could have resisted. I clambered down into the hollow, growing rather clayey in the process; but evoking—in true child-fashion—more fancies from my descent than any grown poet could get out the descent of the Andes; and came by-and-by upon the roots of the first tree. This tree I knew again at once by the peculiarity of its form. Even its present topsyturvy attitude could not disguise it. The trunk, as I remembered, used to rise in two distinct columns which blended half-way up, and formed an inverted V as they leaned towards each other. As a mere baby I had crawled under that V many a time, and found it quite an admirable hiding-place. I climbed up now, by the hanging roots, and looked down at the old seat. In one place the clustered roots were so thickly filled with earth that they made quite a little platform, and to this, with some little difficulty, I climbed. Whilst I stood looking about me from this point of vantage, the slender roots bent under my weight, and I slid slowly down, without in the least hurting myself, but also without power to help myself, until I had reached the cleft of the tree, where I laughed aloud to think what a slide I had had.

I found it not altogether easy to extricate myself, and in my final struggle caught my foot in something which threw me down, so that I had a harmless tumble out of the tree cleft into a little clayey hollow which lay on one side below it. Rising from this second slip much besmeared, but still laughing, I found that I had brought something with me which entangled my feet. It turned out to be a shirt, very much besmeared, and to my amazement I discovered on turning it over that the front and wrists were

decorated with studs and links exactly like those worn by Mr Hartley—Uncle Ben. I rolled this trophy up carefully, and without stopping to think of my besoiled aspect, went hotly up the broken hill-side over the road and towards the cottage. Sally was about by this time, and cried out: 'Heaven a mercy!' when she saw me coming. When I shewed her my treasure-trove, which I did at once before she had time to scold me, she threw it away with an exclamation. 'Mercy on us, child! Don't bring your old rags here, you dirty boy!' But I recovered the shirt with more resolution than I was commonly master of, and shewed the studs, at which Sally sat down on an upturned tub which happened to be near us in the yard, caught feebly at the pump handle, and cried: 'Bless us and save us!' Seeing that I had made an impression, I followed it up with the statement that I had found the shirt in an overturned tree on the landslip. She was greatly agitated, and asked me if there had been anything else there. Nothing that I had seen, I said.

'Run away back, and see,' said Sally, taking me by the shoulder. 'Run away while you're dirty.'

She herself arose, and together we crossed the yard, and made for the place. I clambered down this time by an easier way than I had first taken, and Sally followed me. When we came to the tree, she said in a quick excited way: 'I remember. A reg'lar cove to hide anythin' in. Let me lift you up, Johnny.' With that she took me in her arms, and lifted me towards the hollow. I caught at a root, and scrambled up easily, and by this time quite as excited as my companion, looked about on every side. 'What's that you're treading on?' cried Sally from below. I looked down and saw a garment half revealed beneath a fall of loose earth. Extricating it with some little trouble, for the foothold was narrow, I threw it down, and came upon another, which I sent after it. There was nothing left, and I got out of the cleft again, Sally's arms receiving me. When we reached the cottage yard, she shook the clothes free of the rough earth which clung to them, and laid them on the ground, and there gazed at them with an expression in which many emotions were blended.

At this moment Mrs Troman came upon the scene, and testified to the greatest surprise at our appearance. 'Well—if—I—ever did!' said the old lady. 'Why, our Sarah, a body might think as yo'd gone crazy.'

Inviting her mother to accompany her, Sally gathered up the besoiled clothes, and went indoors and up-stairs. The old lady, after another ejaculation over me, followed her. A few minutes later, whilst I stood at the sink in the kitchen making myself elaborately muddy in the attempt to clean myself, and marvelling greatly at Sally's excitement, Mrs Troman appeared again, and subjected me to the well-remembered ordeal by water, then laid out clean garments for me from the portmanteau, and sent me up-stairs. I was at first so filled with wonder, that there was no room within me for curiosity, or I might have made some inquiry as to the reason of Sally's emotion. When I had dressed and descended to the kitchen, I found that she had left the house. The old lady, who had recovered her familiarity, and her old sense of control, as I now believe, by the mere fact that she had had me once more under

her hands at the pump, told me in answer to my inquiries that 'children should speak when they was spoke to;' and by that rebuff left me with no other employment than to look at and listen to the old monitory clock, which shook its palsied-like finger at me sixty times a minute in quite the old fashion, and ticked reproof and loneliness. When the palsied little finger had travelled sixty times round the fatuous countenance in the middle of the clock face, Sally returned perturbed and pale, and we three sat down to breakfast together. Mrs Troman had at one time held the post of cook in a gentleman's family; but on this occasion the eggs were pebbly in their hardness, the ham was uneatably smoked, and the coffee was in such a condition that it would have satisfied the gentleman in the old Joe Miller story, who, drinking it for the first time, mistook it for a new sort of porridge, and complained that his companion 'had all the thick.' I had felt the lash of Mrs Troman's tongue many a time; but Sally until that morning had never addressed to me one word of harshness. When in the course of that meal she fell with sudden spitefulness upon me and boxed my ears, without reasonable provocation, I retired from the table, and sat on the upturned tub in the yard in a condition of stony heartbreak, for which my memory could find no parallel. After a time she came out in tears, and kissed me, and protested she hadn't meant it; but that she was that worried with one thing and another, that she declared she didn't know which way to turn. 'An' that I should have struck you causeless, Johnny, my darlin', it does go reg'lar to my 'art.' So she protested weeping. 'Be a man,' she urged with tears, 'and say it didn't hurt you, Johnny, dear.'

I became as manly as I could at so short notice, and declared that it had not hurt me, whereon Sally wept anew and said I was a heart of gold. Matters being thus satisfactorily settled, I was led indoors again; and Sally having wiped her eyes, put on her bonnet and shawl, washed my tear-soiled face and took me out of the cottage, leading me in the direction of the village, until we found the fly in which we had travelled the night before standing by the roadside. We both entered that ramshackle vehicle, and the driver, without waiting for instructions, rattled away with much noise but at no great pace towards the railway station. The singular and untoward event at the breakfast-table had disinclined me for wondering about anything, and I did not at all trouble myself as to where we were going. The fly stopped before the door of the *Ward Arms*—there was a *Ward Arms* or *Dudley Inn* in every parish of the Black Country in those days—and we alighted there. The waiter at the door walked in front of us without speaking, as though he knew our business, which was a great deal more than I did, and marching sedately up-stairs, led us into a room in which my Cousin Will stood alone with the stained garments I had that morning discovered, spread on the table before him. He looked at me with the kindly smile which was common to him, though his eyes were troubled when I entered, and grew sad again a moment later. 'I want to ask you some questions,' he said gently, 'and I want you to be as careful as you can in answering me. Did you see a stranger who frightened you very much, nearly a year ago, down here?'

'Yes,' I said, beginning to wonder if I had been brought here on purpose to be asked.

'Can you remember on what day you saw him?'

It was the day, I answered, when Aunt Bertha first came to Mrs Troman's house.

He referred there to a note-book, and nodded slowly to himself once or twice before he went on: 'How was he dressed?'

I saw his eye turn for a moment to the garments on the table, and in a moment I knew them. 'He wore those things,' I said, 'and a hat like the one that hung on the hat-stand at your house.'

'What did he wear when you saw him next?' he asked. His face was very pale, and there was a suggestion of a memory in it if I could only have grasped it—something I had seen in a dream in my illness—no—yes—the face of the man about whom he questioned me. 'What is the matter?' he said with a kindly hand upon me.

'Nothing,' I answered; 'only—his face was like yours just then, and like—like Mr Fairholt's the night he went to London.'

Sally and he exchanged looks.

'What did he wear when you saw him the second time?' he asked again.

'He was dressed like a common man,' I said, 'in thick clothes and heavy boots.'

'Were you with Aunt Bertha when you saw him that time?'

'Yes,' I answered; 'and he saw her, and shouted something, and then ran away.'

'So near,' he murmured to himself—'So near!' Then after a pause: 'You saw him once more, didn't you, Johnny? How was he dressed when he looked in at the window at home? Had he the same clothes as when you saw him here?'

That question I could not answer. I remembered nothing but the face.

'What made you remember the face?' he asked.

'It frightened me,' I said—'his eyes and teeth.'

He nodded sadly, as if to signify that he understood me, and sat down, resting his forehead on his hand. Sally absently smoothed the soiled garments lying on the table. After a pause he rose again and asked me if I could shew him the exact places in which I had seen the stranger. When I answered in the affirmative, he bade me come with him, and left the room—Sally and I following. We all got into the fly; and from my description of the clay-pit Sally told the driver where to go. We sat in silence as we lumbered along, and after a time Sally stopped the vehicle near a stile, beyond which lay the scene of the first adventure recorded in these pages. Cousin Will inquired carefully as to the direction from which the stranger came, but of that I could tell nothing. Then he inquired with equal closeness as to what main or by-roads could have brought him here, and there Sally's local knowledge came into play, and she told him all she knew.

He paced up and down the walk for a time, and then came back and addressed us. 'It is a poor clue,' he said, 'but it is something. I don't think I shall want you again, Troman.—Good-bye, Johnny. I shall see you soon, at home.' He waved his hand and walked away slowly down the path. Sally looked wistfully after him, and in a little while turned away, taking my hand in hers.

We went back to Hartley Hall next day. Nobody questioned me there, or made any observation on my absence, except to welcome my return. And I was left with a new link in that strange romance which only the years completed for me—a story leading nowhere, and therefore everywhere—a tragic story, to which, before I could read it truly, I gave many wild beginnings and conclusions.

(To be continued.)

## RECOLLECTIONS OF AN EQUESTRIAN MANAGER.

BY C. W. MONTAGUE.

### FOURTH PAPER.

WE were performing at Reading, a comparatively small town, where everybody knows everybody, and news, especially dreadful or mysterious news, spreads at a rapid pace. Detective Blank, a most zealous man and important officer in Reading, was a constant visitor at our circus both before and behind the scenes. Now Detective Blank had an all-consuming desire to distinguish himself; but whether because of the innocence of Reading folk, and the consequent rarity of crime, or from some other cause, he had never been fortunate enough to be concerned in a great criminal case, though it was well known to the good people of Reading that he had a strong ambition for such distinction, and was always busy poking his nose into any trumpery affair that turned up, if there happened to be about it the faintest approach to a mystery. Some of the men belonging to the circus put their heads together, and determined that this meddling industry of the zealous detective should be temporarily exercised upon a promising case.

Our tent was erected at a spot where the street passed over a canal by a low bridge, the canal itself running at the back of the circus. An old box was obtained, and filled with brick-ends and other rubbish; the lid was securely fastened down with about a dozen long screws, driven in as tightly as possible; and when it was nearly dark, two men carried it on to the bridge while no one was passing. Then, waiting till two or three people were approaching, the box was thrown over the parapet, falling with a loud splash into the water below. The men at once took to their heels, easily escaping in the dark. The anticipated result followed. The passers-by who witnessed the affair and saw the men run off, at once communicated the mysterious occurrence to Detective Blank, knowing full well that he would spare no pains to ferret the matter out. Early the next morning those attached to the circus, who were of course in the secret, were delighted to see three or four boats crowded together by the bridge, each boat containing two or more men, all of whom were busily engaged in poking and scraping and raking about in search of the mysterious box. At the head, and directing the searchers, was Blank, full of importance. Our men of course questioned him artlessly as to the meaning of it all; and most mysterious were the winks and gestures which accompanied the equally mysterious observations, jerked out occasionally as he watched the flotilla at work. He was 'on the track safe enough this time;' there had been foul play somewhere—

murder, and he could pretty well guess who was at the bottom of it.

At last, after an industrious search, which, according to the usual fashion of Blank and some other clever people, had been begun on the wrong side of the bridge, a heavy box was brought to the surface and secured. That was a proud moment for our detective, for all Reading had flocked to the spot, and had its many eyes upon him—and the box. A cart having been procured, the box was placed carefully in it; and Blank jumped up after it, to mount guard over his treasure. A crowd followed the cart to the police station, and remained outside to learn the upshot of the affair. The circumstances of the case were briefly reported and entered in the book in due form. The detective was important and reserved; the Superintendent dignified and solemn. In a tone of authority, he directed that the box should be at once opened in Blank's presence. But no one had a screw-driver; so a constable was despatched to borrow one. The screws were large and long, and the wood was hard. After much crouching of the screw and grunting of poor Blank, one of the dozen guardians of mystery was extracted, and placed carefully away to furnish a 'clue.' Another followed; the perspiration dropping off Blank's excited face. And so one by one the screws were got out; and as the barrier between mystery and curiosity became weaker so did the mystery appear greater, and the excitement grow more intense with every extracted screw.

At last the lid is free, and Blank hurriedly lifts it from the box, exposing the contents to view. The reader can imagine the scene which followed much better than I can describe it. Indeed, I should only weaken the effect in the reader's mind by attempting to depict the blank speechless consternation of all present, the utter confusion that fell upon poor Blank! It was quickly perceived that the whole affair had been a planned hoax at the detective's expense, and the laugh went against that busy-body for a long time after. But the cream of the joke has yet to come. The hiring of a number of boats and a body of men for the best part of a day—to say nothing of a cart—involves considerable outlay. During the day a 'bill of costs' was handed in to the Superintendent, who, however, laughed at the idea of his being responsible for the expense, and referred the men to Blank, who had employed them. Whether they ever got their money, is a point upon which I have no information.

One night during the performance of a pantomime at Leamington, in which William Ginnett took the part of clown, a curious hitch occurred. At the moment when that ever-mischievous individual had to run on to the stage with a baby, supposed to have been stolen from some perambulator, which said baby is then thrown violently at the policeman as he rushes in, staff in hand, the dummy, or as it is termed, 'property' baby, was nowhere to be found. It so happened that a woman was standing near the ring door with her baby in her arms at the moment when William Ginnett came for his dummy. Seeing that it was not forthcoming, he at once snatched the baby from the woman's arms, and rushed with it to the ring. The woman thinking, no doubt, that her child would

be subjected to the same rigorous treatment that the dummy has to undergo, was for rushing pell-mell after the clown; her struggles to do so when we restrained her being at once laughable and touching. I assured her that the baby was as safe in the clown's arms as in her own; and in the end that proved to be so. Ginnett tossed the baby up and down, and made pretence to throw it at the policeman, but handled it as tenderly as a woman could have done. Cheers and roars of laughter arose from the audience when they discovered that the clown had a real baby in his arms; and a recall had to be complied with before the child was finally handed over to its anxious mother. Many of us regretted that we had *not* allowed the woman to rush in after her baby, as it certainly deprived the audience of a passage-at-arms rarely to be witnessed on any stage!

Towards the close of 1861 I arrived at Canterbury, to make preparations for a series of performances in that city. The individual with whom I had to negotiate both in his public and private capacity was a local celebrity of the name of O—, who, besides being bill-poster, town-crier, and official servant of the Mayor, was a general manager of other people's business as well as his own. Possessed of an unshakable faith in his own sagacity and infallibility, he was fully convinced that nothing in Canterbury could go right unless he had a finger in it. He was indeed a most important man, the most important man in the city. Without him, not even the Mayor himself could have rightly fulfilled his functions or exercised his civic sway. Indeed, it is quite an open question whether his Grace the Archbishop himself was not in some way indebted to the omniscience of the town-crier. Be this as it may, I must freely confess that his services were necessary to me in making my arrangements, both in choosing the ground for our performances and in billing the town and suburbs with our placards. Having brought this business to a successful issue, we repaired together to the parlour of the *Horse and Jockey*—our headquarters during our stay in Canterbury—to cement in a friendly glass the compact into which we had entered. Now, this same O—, town-crier, bill-poster, and Mayor's factotum, was fond of a 'glass and gaiety,' and when duly inspired by his potations, the spirit of boasting was strong upon him. In addition to O— and myself, there were two or three others in the parlour; and presently the conversation turned upon circus matters generally, with a digression respecting conjurers and their tricks. My friend began to depreciate the cleverness of these men; their tricks were easy enough—he could do any of them himself. We listened good-humouredly to his assertions; and nothing more would have come of them, had it not happened that two policemen, not belonging to the town, just then entered the room. As a matter of course, O— at once questioned them as to their business; and we were informed in reply that they had brought a prisoner from Chartham, a town some four miles distant from Canterbury. The valiant town-crier was mightily tickled at the idea of any one submitting to be led captive by two such men as they were.

'If you tried to take me along like that,' said he, 'you would find you had a slippery customer to deal with.'

'But we should handcuff you,' replied one of the constables.

'Handcuff me?' exclaimed the boaster with a derisive laugh—'handcuff me? And so you might! D'ye think I'm not as clever as any of your tuppenny conjurers? I've seen *them* slip the bracelets off easy enough, and I'll bet any man a gallon o' beer that I can do the same.'

The bet was arranged. One of the policemen produced a pair of handcuffs, and these being placed upon O—'s wrists, were shut to with a snap. Beginning his efforts with a smile on his face, the good man wriggled and twisted and turned about in the most comical manner imaginable; first sitting, then standing, then sitting again; getting exceedingly hot and flustered and red in the face, and finally being obliged to own himself beaten.

'Here, you!' he cried. 'I won't try any more. Undo 'em and take 'em off.'

'We can't undo them,' replied the officer drily; 'we've no key with us.'

'No key?' exclaimed the town-crier in dismay. 'Then what the mischief did you put 'em on for?'

'Oh,' replied the constable with perfect composure, 'you said you could take them off yourself, so we thought it was all right. It's not our fault if you can't.'

'Well, what's to be done?' inquired the poor man, beginning to feel very uncomfortable.

'Why, you'll have to come along with us to the police station; the Superintendent has a key.'

'What!' shouted the town-crier, with a sudden access of outraged dignity, as he shook his pair of fists at the officer—'what! You expect *me* to walk through the streets with *these* things on?'

'There's no help for it,' was the comfortless reply; 'unless you think the Superintendent is likely to come to you.'

The civic functionary was by this time in a terrible state of mind; the bare idea of having to walk through Canterbury with handcuffs being sufficient to overwhelm him with a dreadful horror. I suggested that the policemen might walk on a little ahead, while he could follow them with an air of unconcern, and carry his arms across his breast in such a manner as to conceal the offensive 'bracelets' from view. This idea was adopted. The two officers started for the police-station, and O— walking in the rear with as great an air of dignity and superiority as he could command, arrived there a little after them, and entered composedly. I followed on myself to witness the result, for I guessed rightly that the joke was not yet played out. After inspecting the handcuffs, the Superintendent declared with a solemn shake of the head that his key would not open them; adding: 'You will have to go to Chartham to get them unlocked.'

It is impossible to picture the look of intense dismay that answered this announcement. 'But can't some one go and fetch a key from Chartham?' was the old man's piteous appeal.

'We can't wait here two or three hours,' said

one of the officers, 'while a key is being fetched; and besides, they would not let a key leave the office. You've got to come along with us, and that's the end on it.'

'O lor!' exclaimed the victim; 'what will the people say when they see me?'

'It's getting late, and we must be off,' replied the policemen.

And to cut the story short, off they went, a four-mile march to Chartham, the town-crier handcuffed, and the two policemen with him, the poor man falling far short of his boast, that he 'should prove a slippery customer to deal with.'

The most absurd rumours were very soon afloat in the town and neighbourhood, to the effect that the poor town-crier had committed this, that, or the other offence against the laws of the land, and had accordingly been taken to the lock-up. It may be easily imagined that he was led a pretty life for some time after by his fellow-citizens; but by degrees the incident was forgotten, save by a few; and now the old man, who is still alive, laughs as heartily at the affair as any of the people to whom he may chance to recount it.

I will now relate the circumstances under which I commenced a tour in company with a noted conjurer named Wellington Young. Passing through Harrow one day, with my thoughts intent upon the possibility of doing a little business there, I learned, to my surprise, that no public entertainment had been given in the town for upwards of two years. This arose chiefly from the fact that the Assembly Room, which was old and in a ruinous state, had been pulled down, and a new one had not yet been erected. My idea was that a good conjuring entertainment would be a great attraction in the town, and would certainly be patronised by all the Harrow Boys in a body, if they were allowed to come. With this project strong upon me, I proceeded to learn whether any suitable building existed near enough to the schools, and was informed that there was a large empty barn by the road-side a short distance from the centre of the town. Upon inspecting the place, I found that there were no doors.

'Oh, that won't matter,' said the proprietor, a Mr Chapman. 'The building was used not long ago for them amateur chaps as played summat from Shakspeare, I think they said; and they fixed up a couple of rick-cloths for doors.'

Satisfied with the appearance of the place, I made my bargain with Mr Chapman contingent upon my obtaining the head-master's consent for the attendance of the boys, and at once proceeded on that errand. Dr Vaughan, lately of The Temple, and now Dean of Llandaff, was then head-master of Harrow. Arrived at his house, I gave the liveried servant my card; and was ushered into a luxurious apartment, furnished throughout in the best of style, the little odds and ends that lay about betokening most plainly the polished and thoughtful taste of the scholar and gentleman. Presently Dr Vaughan entered the room, and without any further knowledge of me than my bare name, came forward and shook hands with me with the hearty grip of a man. I hastened to state who I was and what was my business, prefacing my explanation with an apology for the mistake he had evidently fallen

into, probably through supposing that I was the parent of one of the boys. I mention this incident, not so much to boast of the real honour of shaking hands with a man of Dr Vaughan's personal merit and well-deserved position, but rather that I may testify to the extreme courtesy with which he treated me, under circumstances which for men of less real worth would have proved very embarrassing. Having mentioned to the Doctor that I had recently given an entertainment at Harford Grammar School, by permission of his brother there, who had afterwards expressed his entire satisfaction, Dr Vaughan readily gave his consent to my request that the boys might attend; and having thanked him, I withdrew.

I at once set about my preparations. The day was fixed; notices were placarded about the town; a pianoforte was hired, and the services of a very skilful young lady-pianiste secured. The next thing was to procure my conjurer; and with that object in view I paid a hurried visit to a certain locality in London, where conjurers are as thick as banks in Lombard Street or book-shops in Paternoster Row. It was here that I engaged with Wellington Young, a man well known all over the kingdom; and the engagement led to his accompanying me on my provincial tour. At Harrow he was announced as 'Monsieur Bosco.'

The day arrived; all my engagements were complete and satisfactory. The hour had come for the commencement of the day performance for the boys, and all I wanted now was to see my audience come trooping down the road towards the barn. The 'doors' had been open some time, and a few of the townsfolk had dribbled in. But my great hope, the lads, had not yet put in an appearance. My heart began to sink into my shoes at this threatening prospect of an empty house. Presently one solitary boy came round the distant corner with a quick swinging step; a few yards behind him were two more; then came a group of four or five; and presently a little army of my juvenile patrons swarmed down the hill, and quickly filled the barn. I was now as elated as I had previously been downcast. Sharp at the appointed time, my pianiste came upon the platform, took her seat at the instrument, and commenced a lively piece. At the same moment, the boys, who of course were out for a 'lark,' began throwing oranges at her; at such a rate too that I should think a boxful must have been used up in this way. Not being able to appreciate favours of this description, the fair performer escaped hurriedly from the scene, and amid loud cries for 'Monsieur Bosco!' that gentleman came upon the platform. Another demonstration from the boys greeted his entrance. Amidst the din of many voices might be heard individual remarks such as, 'Oh, you old villain!' or 'Where's my money, you thief?' &c. &c. This reception, at first inexplicable to me, was afterwards made clear when I learned that my conjurer had very recently given a private performance before those very boys in one of the school buildings, and had exercised his ingenuity in a manner that did not entirely please some of his audience, who now recognised him again. But Monsieur bowed and smiled, and smiled and bowed again until he had conjured away all the discordant elements of his reception,

and then the performance began, and was carried through to a successful close.

Among my audience was one young lad of noble birth, with whom I had a long chat, a lad of quiet, intelligent ways, and shewing much mature thought, for one so young, in the many questions he put to me. He is now Marquis of Bute.

### THE DUKE'S HOUSE.

I WAS born in an old chartered and very picturesque town in a western county, in whose vicinity stood an ancient ducal palace, which had not been occupied for many a long year; and like other buildings left to decay, it had the reputation of being haunted. There certainly were strange sights and sounds to be seen and heard sometimes by those who were near the place at dusk and after dark; but it was never looked into. The uneducated were too superstitious and frightened; the better class were too busy or too indolent; and we had no rural police in those days to trace out the causes. It was a great pity for such a fine Elizabethan structure to fall to ruins. I remember it as a strong and beautiful mansion, with its lawns and terrace-gardens, and its many windows as there are days in a year. This I doubted when a child, and often got the nurse-girl to walk round the house, to count them with me; but we never attained our object; for if the sun got overclouded, she would be sure to see a ghost at some gloomy window, and rush off, leaving me, terrified, to follow. The old residents had died out, the title having become extinct; and around it were sprung up mills and factories, which prevented the aristocracy from living in it. The mill-owners too preferred being farther away from their counting-houses and smoky chimneys. Besides, it must have been a very rich man who could put it in decorative repair and keep up such an establishment. In those days, our merchant-princes were content with very modest dwellings, such as many a middle-class man nowadays would deem it derogatory to live in. I am writing of a slow and sure age; we are now living in a fast and reckless one.

But to my story. I had attained an age when ghosts or hobgoblins and such-like rubbish did not terrify or trouble me. I was a married man, the father of several children, when a cousin came to visit us, who was highly delighted with our pretty town; and knowing her to be very clever with her pencil, I asked her to paint me one or two of the scenes in the neighbourhood. This she willingly consented to do; and we sallied forth to fix on what should be her first picture. She thought the view from the Duke's House—as it was called—would be the best. I told her she dared not trust herself in there, for it had been uninhabited for the last century, and was haunted. She laughed, and said she did not believe in ghosts; she was not so much frightened at the dead in solitary places, as at the living; and her curiosity being excited, she wanted to explore the old building. So, whilst she went for her easel and materials, I got the keys from an old man who lived in the old court-yard of the ducal residence.

We walked through the rooms, admiring their

old grandeur, the lofty marble columns, standing on marble hearths each side of the fireplaces, supporting the groined ceilings, with coats of arms and other devices carved in marble between them. The tapestry round the walls smelled mouldy, but was in a wonderful state of preservation, and no worse than when a boy, twenty years before, I had pitied the ladies who worked so hard to cover their rough stone walls. My cousin selected a room for her first sketch; and as I was leaving, I advised her to lock the door after me, to guard against intrusion; but she objected to this, saying she never locked herself in any room, for fear of sudden illness; but if I would lock the door on the outside, and call for her as I came from the bank, she would be much happier to know she was secure from interruption. After some hesitation, I consented to do this, and with the key in my pocket, went to business.

It was just closing-time, and I was locking up the strong-room, when the manager drew my attention to a matter which involved a protracted search of papers—a search, however, which happily proved successful. All other thoughts having been driven from my head by this unwonted piece of business, I reached home, and as I mechanically took out my latch-key and went into the house, still in a reverie, I was met by my wife, who asked why I was so late for dinner, and where Mary was.

'Mary!' I exclaimed; 'I forgot all about her;' and catching my hat off the peg again, I rushed out, speeding as fast as I could to liberate her, and bitterly lamenting my folly for locking her in.

It was quite dark when I got there, and I had no light; but I felt out the keyhole, unlocked the door, and tramped loudly up the stairs. I called her, but received no reply. Going into the room in which I had left her, I gazed into the recesses, and found her huddled up in one corner.

'Mary, my poor dear child,' I exclaimed, 'will you ever forgive me?'

'Hush, hush! for pity's sake, hush!' she said in a whisper.

'Why did you not answer me when I called you?' I replied.

'I did not hear you until now. Oh, I have seen such fearful sights!'

I felt her whole frame quiver, and then, as I was assisting her to rise, she fell on me in a fainting fit. I had no light, not even a fusee in my pocket, and no one was within call. At length I thought of the water she had for her work; it might revive her if I could find it. I laid her down gently, and groping about for the water, sprinkled her face, which had the effect of bringing her round.

Hurriedly rising, she exclaimed: 'Oh, come away. Take me out of this horrid place!'

I began to rally her about the absurdity of her fears, and her telling me in the morning she was not superstitious.

But she interrupted me by saying: 'I have seen no ghost. We are in a den of horrid thieves and murderers! I saw two bodies dragged up-stairs, stripped of everything, with just a sheet round them. Oh, come out of the place, or we shall be the next. Even now they may have heard us, and they will murder us.'

I asked her if she had not got drowsy whilst

waiting for me in the gloom of the afternoon—for it was November—and dreamed it.

'O no!' she replied; 'I did not dream; and horror-struck as I was, when the ruffians descended the stairs again, I crept silently up to see if I could find out anything; and, O horror, I shall never forget the sight! Do let us go.'

I must confess I felt a little creepy and nervous, but was myself again in a moment. Feeling her trembling, and fearing another swoon, I began descending the stairs with her, when a light from below shot up to us. She clutched me convulsively, but was reassured by hearing my wife's voice calling out: 'Frank! Mary! Where are you?'

'Here,' I said; 'all right.'

'Indeed,' she replied, 'I think it all wrong to give me such a fright.'

We had reached her by this time; and by the light of the lantern she had brought, she caught sight of Mary's blanched face.

To my wife's interrogatories respecting her illness, the poor girl assured her that she was not ill, but terrified. 'I will tell you all,' she added, 'when I get home.'

I was thankful for the light, and left them walking on, whilst I ran up for Mary's painting materials, and locking the door, I put the key in my pocket, meaning to return again after dinner and try to elucidate the mystery. When I joined them, Mary was asking my wife how she dared come alone all the way from my house to that dreadful place.

She replied, she would rather do so at any hour of the night than be kept in suspense, and added: 'As soon as the day began to close, I looked for you; but as you did not come, I thought Frank must have called for you, and was lionising you in the town. But when fully an hour after dinner was ready, he came back without you, and rushed off like a madman when I asked for you, I was for the moment bewildered; but thinking you must have been taken ill, and that Frank would want help and a light, I hurried to the kitchen for a lantern, and told one of the girls to put on her things and accompany me to the Duke's House, for you were there, and must have been taken ill. But would you believe it! She flatly refused, saying it served you right for going there; you would never be found, for never a person going near that house after dark was ever seen afterwards. I ridiculed her nonsense, and appealed to the others; but neither would go, so I had no alternative but to come alone.'

When we reached home, I went into the cellar, and got a bottle of Moselle, and made Mary drink off half a tumblerful; and then we sat down to dinner. We were just settled to dessert, when a friend dropped in for a hand at whist, and wondered at our being so late. I told him the reason; and then asked Mary for her story, as I had forbidden her talking about it until she had got her dinner.

She began: 'After you left me, I worked on for a long while, until, feeling hungry, I looked at my watch, and found it was past two o'clock. I then ate my sandwiches, and after taking a turn through some of the rooms, settled into work again. I had not been long thus occupied when I was aroused by strange irregular noises which seemed to come from the landing above. I then

awoke to the consciousness that I had been hearing a scuffling of feet for some little time. The scuffling commenced again; and I got up, moved cautiously to the door, which was ajar, and looked out just in time to see an old hag disappear in a doorway above, and the door close softly behind her. I stepped up, and noiselessly opened the door, and peeped in; but to my great surprise, the room was empty. I walked in to see if there was any other door through which she could have passed; but there was not; nor was there a window she could have got out of. I was fairly puzzled, for you know I do not believe in ghosts. I went down to my room, but could not settle to work. I went up again and again; but could discover nothing, nor could I detect a sound. It was broad day when I saw her; and now I found it was getting too dark for me to do any more to my painting, so I gathered all together, and put them in one corner, ready for to-morrow morning, and sat down to wait for you. As it was now getting dark, and I had been expecting you since three o'clock, I thought you must have forgotten me, so I went down to see if I could find any means of egress. As I could not, I returned to my room, where I could watch for your coming; for it was not so dark but I could see any object crossing the court. Whilst I was thinking whether I should tell you about the old woman to-night or wait until to-morrow, the wind rose moaning amongst the trees, which made it very dreary; but soon I heard sounds above the sighing of the winds, strange heavy thuds below me; and the legends you told me as we walked through some of the rooms in the morning, rushed to my mind; but I soon banished such nonsense, knowing it must be produced by living beings.'

'What did he tell you?' asked my wife.

'Why, he told me about a very wicked Duke who for some baleful reason whipped his unfortunate wife every night through the house, her lamentations being heard by any one who had the temerity to be near the house after dark. Well, all was quiet again for a little while, when I heard voices, and the sound of something being shuffled and dragged up the stairs towards the room I was in. I crept behind the door, and holding my breath, peeped through the crevice. To my horror I saw two ruffians dragging up something wrapped in a sheet; they dragged it to the room I had examined by daylight. The door opened, emitting a lurid glare. They entered, but did not stay long, for they soon came out, and traoped down-stairs again, leaving the door partly open. I heard the sound of their footsteps die away in the lower basement, and all being quiet, I stole quietly up the stairs and peeped into the room. There, before a fire of red embers stood the old hag I saw go up in the afternoon. She was stirring something in a caldron on the fire, gibbering and muttering like the witches in *Macbeth*. She turned round, and I thought her gaze fell on me. I felt myself sliding down, and remembered no more until I was again aroused by the same two demons coming up with another bundle. What could I do? They would soon be up. I knew now that the old witch had not seen me, for I was left unmolested. I saw I might gain my room before they could possibly reach it, and they would not hear me above their own din.

I did so, and knew no more until you roused me.'

When she had ended, I said: 'Mary, dear, do you not think you must have dropped off to sleep whilst waiting for me, and your gloomy surroundings caused that very ugly dream? You know it has been proved that one minute's doze suffices the soul for vagaries which, in our waking hours, would take weeks to perform.'

'No,' she replied; 'I did not sleep one moment. Besides, should I sleep, do you think, in broad day, especially after I saw the old woman vanish out of my sight?'

'Then you do believe in ghosts!' I laughed out.

'Indeed, I do not; but it is all so puzzling.'

'And you are certain she did not come out again?'

'Quite positive; for I did not take my eyes off the door until I was in the room, and I walked into the large fireplace, and looked to see if she had hid herself there. But it was all clear up to the sky.'

Well, I would believe in its being haunted rather than its being a den of wholesale murderers. Were our town a seaport or near the sea, I should think it was a haunt for smugglers, who had had a scuffle with the coastguard, and had brought home their dead to give them burial. Then I thought of the resurrectionists or body-snatchers; but there was no medical school in the neighbourhood, or I would have put it down at once to those worthies. The more I thought, the more I felt convinced it was the result of my cousin's disordered imagination, from being left all alone at nightfall in such a ghostly building.

After a while I said: 'Whist is out of the question to-night; no one's thoughts would be in his or her hand; so if Tom would like a stroll, I am ready for one.'

He eagerly accepted the invitation; but my wife and Mary both sprung up and intercepted us on our way to the door, saying, I should not go out. She knew I meant to go to the House, and if I did, she would go too. I pooh-poohed the idea of going there, especially after what Mary had told us.

'You don't believe a word I have told you—I am sure you do not; I can see it by the twinkle of your eyes!' she exclaimed.—'And don't you go, Tom, let me beg of you' [Mary had a special interest in Tom]; 'and then he won't care to go alone.'

So Tom promised, fully meaning to keep the promise, I am sure; and we were allowed to pass.

As soon as we got outside, I said: 'Well, Tom, I did not promise, nor do I wish you to break yours; but I am off to the "Duke's." I have the key in my pocket, and wish to satisfy myself; to-morrow may be too late.'

'Then you believe Mary's story?' he said.

'Well, I am bound to believe it; but it is not murderers or ghosts, and I'll find out before I come back. But don't you go in until I return, or you will be sending my wife after me, and all will depend on quiet.'

'Nay,' he said; 'if you go, I will. No great harm in breaking a promise of that kind; and it will be forgiven when I plead anxiety for your safety.'

'Agreed,' I replied. 'But we must have a light.

And if I go into the kitchen for my bull's-eye, it will create suspicion there, and the news will be carried into the parlour.'

'I have one at my lodgings,' he said; 'and it's on our road; we can call and get it.'

We accordingly did; and Tom suggested our taking a pair of pistols, in case of need. I firmly believe Tom hoped for a brush with the villains.

Arriving there, we walked round the house before entering it, and peeped into every nook we could find. At last, we directed our glance to the upper regions; and about half-way up the circular tower we thought we could discern a light. This was the wing Mary had chosen for her sketch. Tom could see it too. So we determined on entering, and if possible solving the riddle. As we reached the second landing—it was a noble staircase with its carved balustrade—we heard voices and thumping as of beating heavy substances against the walls. When we came to the story whence we saw the light on the outside, Tom produced his lantern to find the door, for so well did it fit that we could see no crevice of light to guide us; and having quietly opened it, we peeped in; but all was dark. We entered; but it was quite empty, and the tapestry being stripped from the walls, shewed nothing but the rough stones. All was now so quiet, that it really seemed as though we had disturbed demon phantoms at their revels.

I said to Tom: 'What can be the meaning of this?'

When just as he was going to reply, the noises commenced again, and we stepped outside and listened attentively. At last Tom suggested: 'One of these niches, which look panelled out for statues, must be a door.'

We examined the one carefully next the room we had just left, and sure enough came upon a secret spring. Tom put his light out of sight and put his hand on his pistol. I very gently pressed the spring, when it noiselessly opened sufficiently for us to see into the room. There was the old hag still at her brew, and one man with a knife dismembering the limbs of his victim. He stopped his work to address some beings out of our sight; and we, having seen enough, quietly closed the door, darted down-stairs, and soon reached home. Tom was always very pale, with large dark eyes; and when he entered the room where my wife and Mary were, his look told in a moment where we had been.

'Yes,' I said in reply to their queries; 'we have been there, and have seen enough to appal the stoutest heart.' Here I caught Tom's well dissembled look of affright, and could contain myself no longer; I flung myself on the couch and roared with laughter.

I laughed so long that my wife began to think my brain was turned. She looked at Tom, but he kept his countenance, and continued his idiotic stare. At last, seeing they were really frightened, I gasped out: 'Murder will out! The corpses were pigs, scalded pigs; and the hag was the old woman that sells such splendid black puddings!'

When I took the key back to the old man, I asked him why he had his butcher's shop at the top of the old building.

'O sir,' he replied, 'don't tell on me. You see, sir, I make a little by letting it very cheap to these

people. I should not be allowed, were it known. They use that room because no one knows of it, and they are unmolested. I can shew the house without shewing that room, to the strangers who visit the town. I used to make a good bit by shewing it in former times, but very few come to see it now.'

I never hear of haunted houses now but I think of the pig-killers.

### 'DIED ON DUTY.'

MANY are the instances of heroic devotion to duty which the history of every nation affords, and the phrase 'Died on duty' is about the noblest eulogium which can be placed above the tomb of any person, no matter what may be his rank or profession. Seldom does it fall, however, to the lot of what has been termed the inferior portion of creation to be thus spoken of and remembered when their brief span of existence is gone, and hence it gives us great pleasure to record in this *Journal*, though many years after the event, a singular instance of grateful attachment to duty in the case of so unromantic a creature as a goose. The story refers to an interesting relic which is preserved in a glass case in the Coldstream Guards' orderly-room at Whitehall. It hangs in a very appropriate place—namely, between the old colours which that famous corps carried on the field of Waterloo, and consists of the head and neck of a goose, around which is a golden collar with the inscription: 'JACOB—2nd Battalion Coldstream Guards.' Beneath it are the words, 'Died on Duty.' Very few men now serving in the regiment are conversant with the history of this devoted specimen of the feathered tribe, who having once volunteered to serve the State in the capacity of a sentry, never deserted his post until the great commander, Death, relieved him from duty.

In 1838, a rebellion broke out in our Canadian possessions, and two battalions of the Guards were sent thither to assist in quelling it, the battalion already mentioned being one of them. Both corps occupied the Citadel of Quebec, and in their turn supplied the guards which were ordered to be mounted in different parts of the town and neighbourhood. Near one of these guards was a farm-yard which had suffered much from the ravages of foxes—animals that were at that period a great pest to the colonists; and as the farm in question had been suspected of being the meeting-place of the rebels, a chain of sentries was placed around it. One day the sentry whose duty it was to watch the entrance to the farm had his attention attracted by an unusual noise, and on looking towards the spot whence it proceeded, he beheld a fine goose fleeing towards him closely pursued by a fox. His first impulse was to have a shot at the latter; but this would have alarmed the guard, and brought condign punishment on himself for giving a false alarm. He was compelled, therefore, to remain a silent spectator of the scene, while every step brought the reynard nearer to his prey. In the height of its despair, the poor bird ran its head and neck between the legs of the soldier, in its frantic endeavour to reach the refuge which the sentry-box could afford; and at the same moment the wily fox made a desperate grab at the goose,

but too late, for ere he could get a feather between his teeth, the ready bayonet of the sentinel had passed through his body. The poor goose, by way of shewing its gratitude to its preserver, rubbed its head against his legs, and made other equally curious demonstrations of joy; nor could it ever be prevailed upon to quit the post, but walked up and down day after day with each successive sentry that was placed there until the battalion left Canada, when the goose was brought away with it as a regimental pet, to England.

The most remarkable thing in connection with the story is that the goose in turn actually saved its preserver's life. Whether the former knew that the sentry was the same man or not, must of course for ever remain a problem; but it so happened that he was on that particular post again about two months afterwards when a desperate attempt was made to surprise and kill the unwary sentinel. It was winter-time, and although it was a bright moonlight night, the moon was hidden ever and anon by the scudding clouds which seemed to presage an approaching storm. In these moments of darkness a sharp observer might have noticed the shadows of several men who, unobserved by the somewhat drowsy sentinel, were endeavouring stealthily to approach the post where he stood. Suddenly, he heard, or thought he heard, a strange rustling sound, and flinging his musket to his shoulder, he shouted loudly: 'Who goes there?' Not a sound, save the echo of his own voice in the distance, and the sighing of the winter wind among the branches of the trees which stood in the deserted farm-yard, responded to the challenge.

Several minutes elapsed, during which the soldier marched up and down his lonely beat followed by the devoted goose, until, deeming his alarm unwarranted, he again 'stood at ease' before the sentry-box. This was the enemy's opportunity, and the rebels were not long in endeavouring to profit by it. Closer and closer they stole up towards the post, the thick snow which lay on the ground completely deadening the sound of their footsteps. But just as two of their number, one on each side of the sentry-box, were preparing with uplifted knife to spring upon the unsuspecting man, the bird made a grand effort, rose suddenly on its wings, and swept round the sentry-box with tremendous force, flapping its wings right in the faces of the would-be assassins. They were astounded, and rushed blindly forward; but the sentry, fully aroused to his danger, bayoneted one and shot at the other as he was running away. Meanwhile, the other conspirators approached to the assistance of their colleagues; but the bird repeated its tactics, and enabled the sentry to keep them at bay until the guard—whom the firing of his musket had alarmed—came upon the scene and made them flee for their lives.

When this incident became known, poor old Jacob was the hero of the garrison; and the officers subscribed for and purchased the golden collar which the bird afterwards wore until the day of his death.

Jacob bore well the discomforts of the voyage to England on board a ship which was noted for its rickety condition, and which was within an ace of being lost in a tremendous storm that overtook her. On the arrival of the regiment in

London, the bird resumed its old duties with the sentinels posted at the barrack gates; and it was exceedingly amusing to watch its movements as it walked proudly up and down with the sentry, or stood to 'attention' beside the box when the latter was saluting a passing officer or guard. The feathered hero was well fed and cared for, and a circular bath filled with water was always at its disposal. Children were its especial favourites, as they used to bring the creature all kinds of food; but Jacob would never tolerate any liberties except when, in military parlance, he was 'standing easy.' For many years Jacob seemed to bear a charmed life; but he was at length run over by a van in the narrow gateway which formed the entrance to old Portman Street Barracks, and had one of his legs broken. Every effort which kindness and skill could suggest was made to save this extraordinary bird; but it was of no avail, and he died like a true English soldier, at the post of duty, after a 'sentry-go' of no less than twelve years. The body of the bird was buried with all honours, where he died; but the head was preserved in the manner already described, and can be seen by anybody who has sufficient influence with the officers or non-commissioned officers of the gallant regiment concerned to obtain for them a peep into the military sanctum at Whitehall.

It should be mentioned in conclusion, that Jacob when living, attracted the attention of the Duke of Wellington, who admired and appreciated devotion to duty in whatever guise or station he found it.

## THE MONTH.

### SCIENCE AND ARTS.

MR C. W. SIEMENS, F.R.S., has supplemented his communication to the Royal Society on the effect of electric light on the growth of plants, by a demonstration of its effect in the ripening of fruit. He exhibited two pots of strawberries, which were started under precisely the same conditions: one had been exposed to daylight only in the usual way, and shewed a bunch of green berries; while the other, which, in addition to daylight, had been under electric light during the night, bore a cluster of large, ripe, well-flavoured strawberries. Thus, as Mr Siemens remarks, 'the electric light is very efficacious in promoting the formation of the saccharine and aromatic matter upon which the ripening of fruit depends; and if experience should confirm this result, the horticulturist will have the means of making himself practically independent of solar light in producing a high quality of fruit at all seasons of the year.'

From a statement made at the last meeting of the Iron and Steel Institute, we learn that toughened glass can be used instead of iron as sleepers for railways. The molten glass is cast in moulds into the several forms required; is afterwards heated to a high temperature, and plunged into a bath of cool oil, 'the result being that the glass becomes converted from its own characteristic brittleness to the remarkable tough fibrous material known as toughened or tempered glass.' A similar effect, as was stated, can be produced by

passing the moulded glass through an annealing oven. The strength and resisting power of the glass thus prepared may be judged of from the fact, that a weight (nine hundredweight) let fall from a height of seventeen feet upon a plate a little more than an inch thick, failed to break it. And where glass sleepers have been laid by way of experiment, they stand wear and tear as well as iron, perhaps better, for they do not corrode. They are made in three-foot lengths, so shaped on the upper surface, that the rail when placed thereon shall exactly fit. If glass can be turned to account in this way, why not as tools, implements, and other mechanical appliances? Its immunity from rust gives it an eminent claim to consideration.

Pure nickel as a metal seems likely to become more useful than ever, for it can now be made perfectly ductile and malleable by adding to it, while in the melting-pot, a minute quantity of magnesium. Nickel thus treated can be drawn into fine wire, or beaten into the thinnest of leaves, and used as a brilliant and durable coating for iron, or may be forged and fashioned into a variety of useful articles.

The passenger steamers of the Thames, the Mersey, and the Clyde have formed the subject of a paper and a discussion at the Institution of Civil Engineers, in which it was shewn that the severest strain to which river-craft are subject arises from their engine-power and the concentration of heavy weights about their centre; that the danger most to be feared is collision, against which special precautions should be taken in the construction of the vessels. For example, proper water-tight bulkheads; overhanging 'sponsons,' to serve as defence; and perfect engine and steering control. In the large vessels, steam or water power should be employed to carry on the steering, with telegraphic communication from the bridge to the engine-room. Moreover, it would not be unreasonable to require that all seats should be fitted loose, and made buoyant, so that, in case of need, they might be made available in saving life.

But after all, as was remarked during the discussion, immunity from collision must not be expected from the ship-builder or the engineer; that depends on the commanders; and unless the commanders of river-steamers are skilful and competent, it is in vain to expect safety from 'precautions of thoughtful construction.' We notice that the Conservators of the Thames have just published a number of stringent by-laws for regulating the navigation of the Royal river, which are to come into operation on the first of June.

Admiral Spratt, conservator of the Mersey, has published a 'Suggestion' for the improvement of the entrance to that river. He first shews that the intricate and shifting channels by which Liverpool is approached from the sea are formed by the drifting or wheeling of the sand round

and round from the adjacent banks; then recommends that an 'economical structure' should be built from the shore on each side, stretching outwards along the inner part of the sandbanks. As at Port Said, he would convert the sand on the spot into blocks of concrete weighing from five to ten tons each, and with these construct barriers which, so far as they extended, would stop the rotary drift, and arrest and hold the sand as a foreshore or beach in front of them.

It is well known that the mariner's compass does not point to due north, a fact which requires to be taken into consideration by those who have occasion to use that valuable apparatus. Study of terrestrial magnetism has led a F.R.A.S. to the conclusion that the various changes of direction which the magnetic needle has undergone within the last three hundred years can be explained by supposing that its movements have been governed chiefly by those of a *strong* magnetic pole revolving round the pole of the earth in about five hundred years. The present declination of the needle at London is  $18^{\circ} 50'$  west of due north. In 1892 it will be  $16^{\circ} 10'$  west, and will go on diminishing until about 1990 it will be at  $0^{\circ}$  or due north. By the year 2702 the declination will be  $11^{\circ} 17'$  east, the same that it was in 1580; and the magnetic pole will then have made a complete revolution in four hundred and ninety-two years.

The Meteorological Council have resolved that their system of sea-surface temperature observations shall be extended until it includes the whole of the shores of the United Kingdom. In some places the men of the Coast-guard Service are to make observations, and the Trinity House and Board of Irish Lights have promised that temperature returns shall be supplied from an additional number of light-ships. Some changes have been made in the weather-telegraph stations: Plymouth is given up, and Prawle Point substituted, as better representing the weather of the Channel; and on the east coast the Spurn Head at the mouth of the Humber is to be an observing station instead of Scarborough. The number of stations in 1879 was one hundred and twenty-nine; of which sixty-six were in England, thirty-one in Scotland, the others in Wales, Ireland, Mona, and the Channel Islands. There are seven self-recording observatories—namely, at Aberdeen, Armagh, Falmouth, Glasgow, Kew, Stonyhurst, and Valentia; and a self-recording anerometer is to be erected in one of the Scilly Isles. A suggestion was offered from abroad that observations and storm-warnings should be carried on through all the West India Islands, with Jamaica as central station; but the Council are of opinion that Antigua should be preferred, as from its position to the windward of the other islands, it is the first to feel the influence of an approaching hurricane.

Professor Loomis continues his Contributions to Meteorology, and in the twelfth, just published in the *American Journal of Science*, sets forth some interesting facts. From observations made all over the United States, including stations on high mountains, he finds it to be the fact that storms

travel more rapidly over the eastern portion of the States than they do over the Atlantic Ocean or the continent of Europe. He suggests as an explanation that the storms in travelling from the Rocky Mountains to the Atlantic pass from a dry to a humid atmosphere. The winds on the ocean are certainly stronger than they are over either of the continents, and the Professor is of opinion that the winds of Central Europe are generally stronger than the winds of the United States. According to his deductions, the average velocity of the winds in England is 11.3 miles an hour; in North Prussia 11.8, and in Vienna 11.5 miles. In Europe eleven instances occur in two years of storms which travel a thousand miles in a day, generally towards a point north of east. In the United States similar storms with a high velocity are of more frequent occurrence.

At Salt Lake City the pressure of the atmosphere is nearly half an inch greater in winter than in summer. In Central Asia the difference is an inch. 'It is evident,' remarks Professor Loomis, 'that the same cause operates in North America as in Asia, but with diminished energy.'

A Meteorological conference at which the Australian colonies were represented, has been held at Sydney. A number of well-considered measures were agreed to; and systematic observations are to be made in such a way as to promise a large increase to our knowledge of the weather of the great southern continent. One among the recommendations is deserving of special attention. It is that tide-gauges be established in as many places as possible around the coast, for it has been ascertained by observation of the gauges already in operation, that they 'give valuable indications of distant earthquakes, gales, and sea-disturbances.'

'History and Methods of Palaeontological Discovery,' is the title of an address delivered by Professor Marsh to the American Association at their Saratoga meeting. It is well worth reading by all persons desirous to know something of the way in which palaeontology, or the history of fossils, grew to its present condition, or to form an idea of its future development. 'What is to be the main characteristic of the next period?' inquires the Professor; 'No one now can tell. But if we are permitted to continue in imagination the rapidly converging lines of research pursued to-day, they seem to meet at the point where organic and inorganic nature become one.' That this point will yet be reached, he does not doubt.

Economy of resources is the order of nature; and economy, or thrift, in all the families and communities that practise it tends greatly to their welfare. This sounds very much like a truism; but it is one of the truisms which must be repeated again and again, before people will believe it; that is, adopt it as a rule of conduct. This truism formed the subject of a conference which was held last month at the Mansion House, under the presidency of the Lord Mayor, among a number of able and distinguished persons who had much to say on different points of the question. One suggested a way in which pence might be made to grow into shillings and pounds; another shewed how easily small investments could be facilitated; another, that in eating and drinking there was constant room for the exercise of thrift; and Lord Derby in closing a speech which ranged over the

whole question, and included an intimation that the conference would be annual, said: 'Pauperism is to my mind national dishonour; so is drunkenness; so is preventable disease; so is the miserable squalor in which our poorest classes in the large towns live even when they escape the workhouse.' Thrift has so much to do with satisfactory culture and progress in science and art, that we may without impropriety allot these few lines to the subject.

The *Transactions* of the Royal Institute of British Architects contain a paper on Buddhist Architecture, by Mr W. Simpson, which in many particulars is as interesting as Sir H. Layard's account of his explorations at Nineveh. On the entry of British troops into the Jellalabad Valley in 1878, Mr Simpson followed them, and made a series of excavations in the topes, or mounds, so frequently met with in Afghanistan. In these mounds, architectural remains of temples, tombs, and other structures have been buried for many generations; and on some of them forts have been built. In the central cell or grave of the first that was opened, two handfuls of brown dust, a reliquary, and twenty gold coins were discovered, seventeen of which represented reigns of three Indo-Scythian monarchs, and three were Roman of the time of Domitian, Trajan, and the empress of Hadrian. These three, as Mr Simpson remarks, 'come down to the first quarter of the second century of our era, and are of value as giving the limit of possible antiquity to the monument.'

After much digging and searching of topes and of caves (which are also numerous), Mr Simpson concluded that he had made clear 'the existence of a style of art coming from the valley of the Euphrates, and probably dating from the time of Darius,' and that 'beyond a doubt the Greek architecture of Bactria came south and crossed the Indus. Afghanistan,' he continues, 'is the highway by which these styles came, and it is the country in which to seek for knowledge regarding them. There are vast regions beyond Afghanistan of which we literally know nothing. Armies may march and fight in Central Asia, and archaeologists must march also and explore. They at least must conquer. When Afghanistan is archaeologically ours, the student of Indian antiquities will be a long way on towards meeting the explorers of Nineveh and Babylon;' and he hopes 'that the day is not far distant when they may meet, shake hands, and compare notes, somewhere about Ispahan, Yezd, or Naishapoor.' Readers who wish to discuss Mr Simpson's conclusions will be aided in their purpose by the lithograph plates and woodcuts which accompany his paper.

At the first meeting for the session of the Society of Biblical Archaeology, Mr Hormuzd Rassam gave an account of his explorations and discoveries in Assyria, particularly his finding in the mound of Balawat the famous bronze gates illustrative of the reign of Shalmaneser II., the conqueror of Ahab and Jehu. Photographs of these surprising examples of the art of ages long long ago, are to be published.

Where did the ancient Assyrians come from? Dr Oppert, Professor of Assyriology in the College of France, Paris, stated that he and other scholars had succeeded in tracing them to an island in the Persian Gulf, now called Bahrain by the Arabs. It is the centre of a small archipelago, and if

explored, would perhaps yield relics interesting to anthropologists.

We have to acknowledge a donation of £1 from *Onward* in behalf of the Fallen Women's Mission.

## ANIMALS I HAVE KNOWN AND LOVED.

### AN EDITORIAL STATEMENT.

As some of our readers have expressed doubts as to the truth of many of the statements contained in the papers upon Animals, lately published in this *Journal*, we have communicated with our contributor on the subject. In reply, she assures us that everything she has written respecting her animals is 'strictly correct, and without any colouring whatever.' Indeed she informs us that she has suppressed the relation of facts even more surprising than those contained in the series, lest they should appear utterly incredible. 'It does not surprise me,' adds our contributor, 'that many persons question the correctness of these stories, as so few make Animals their study, and educate them as I have done throughout my life. Those I have written about I have made my friends and companions, training them as I would an intelligent child, which is the secret of the remarkable development of those "I have known and loved."'

### A SONG IN A SHOWER.

HEYDAY! 'tis May-day; the merry winds are blowing,  
Shaking snowy blossoms fast from yonder gnarled tree;  
Rough and brown, through tender leaves, the knotted  
stems are shewing,  
Bearing little promise of the fruit that is to be.  
Blow, winds, blow! we do not heed your bluster.  
Hard and fierce your tone may be, yet still your touch  
is kind.  
Safe and warm the germs lie hid, in many a tiny  
cluster,  
And we do not mind the blossom if the fruit is left  
behind.

Heyday! on May-day your eyes look sad and weary,  
Maiden, leaning listlessly against the gnarled tree,  
What has blown your hopes away, and left your life so  
dreary?

Where is your fine lover gone, that once we used to see?  
Know, Child, know, you have lost a faithless wooer.  
You are young; the world is wide—another you will  
find.

If the first was fair and false, the second may be truer;  
So don't regret the blossom when the fruit is left  
behind.

Heyday! the May-day of life is dawning o'er you.  
Many blessings this rough wind may blow to you to-day;  
Store of patient readiness for what may be before you:  
Strength to bear the sunshine that may brighten up  
your way.  
Youth's first dream in all its subtle sweetness,  
Passes like that snowy shower, at breath of wind  
unkind;  
After, comes the lasting love, in all its rich complete-  
ness;  
So do not mourn the blossom when the fruit is left  
behind.
